

# Microsoft

## Exam Questions MS-100

Microsoft 365 Identity and Services

### NEW QUESTION 1

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You hire a new Microsoft 365 administrator named Nestor Wilke. Nestor Wilke will begin working for your organization in several days.

You need to ensure that Nestor Wilke is prevented from using his account until he begins working.

A. Mastered

B. Not Mastered

**Answer: A**

#### Explanation:

You need to sign-in status for the account to 'Blocked'. Blocking doesn't stop the account from receiving email and it doesn't delete any data.

\* 1. On the home page of the Microsoft 365 admin center, type the user's name into the Search box.

\* 2. Select the Nestor Wilke account in the search results.

\* 3. In the 'Sign-in status' section of the account properties, click the Edit link.

\* 4. Select 'Block the user from signing in' and click the Save button.

### NEW QUESTION 2

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You need to identify all the users in the subscription who are licensed for Microsoft Office 365 through a group membership. The solution must include the name of the group used to assign the license.

What should you use?

A. the Licenses blade in the Azure portal

B. Reports in the Microsoft 365 admin center

C. Active users in the Microsoft 365 admin center

D. Report in Security & Compliance

**Answer: A**

#### Explanation:

In the Azure AD Admin Center, select Azure Active Directory then select Licenses to open the Licenses blade. From there you need to click on the 'Managed your purchased licenses link'. Select a license you want to view, for example Office 365 E3. This will then display a list of all users with that license. In the 'Assignment Paths' column, it will say 'Direct' for a license that has been assigned directly to a user or 'Inherited (Group Name)' for a license that has been assigned through a group.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

### NEW QUESTION 3

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

Name	Role
User1	Global administrator
User2	Billing administrator
User3	None

You enable self-service password reset for all users. You set Number of methods required to reset to 1, and you set Methods available to users to Security questions only.

What information must be configured for each user before the user can perform a self-service password reset? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

User1:

Email address only  
Phone number only  
Security questions only  
Phone number and email address

User2:

Email address only  
Phone number only  
Security questions only  
Phone number and email address

User3:

Email address only  
Phone number only  
Security questions only  
Phone number and email address

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Microsoft enforces a strong default two-gate password reset policy for any Azure administrator role. This policy may be different from the one you have defined for your users and cannot be changed. You should always test password reset functionality as a user without any Azure administrator roles assigned. With a two-gate policy, administrators don't have the ability to use security questions. The two-gate policy requires two pieces of authentication data, such as an email address, authenticator app, or a phone number. User3 is not assigned to an Administrative role so the configured method of Security questions only applies to User3. Reference: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-policy#administrator-passw>

NEW QUESTION 4

- (Exam Topic 5)  
You are confirming an enterprise application named Test App in Microsoft Azur as shown in the following exhibit.

Test Application

Click here to verify application configuration.

Basic Settings

Internal Url

https://testapp

External Url

https://testapp-m365x289755.msappproxy.net/

Pre Authentication

Azure Active Directory

Connector Group

Default

Additional Settings

Backend Application Timeout

Default

Use HTTP-Only Cookie

Yes

Translate URLs In

Yes

Application Body

Yes

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

Answer Area

To ensure that when users access TestApp, the proxy automatically scans for internal URLs published through the Application Proxy, set [answer choice]

To protect TestApp from Cross-Site Scripting (XSS), set [answer choice]

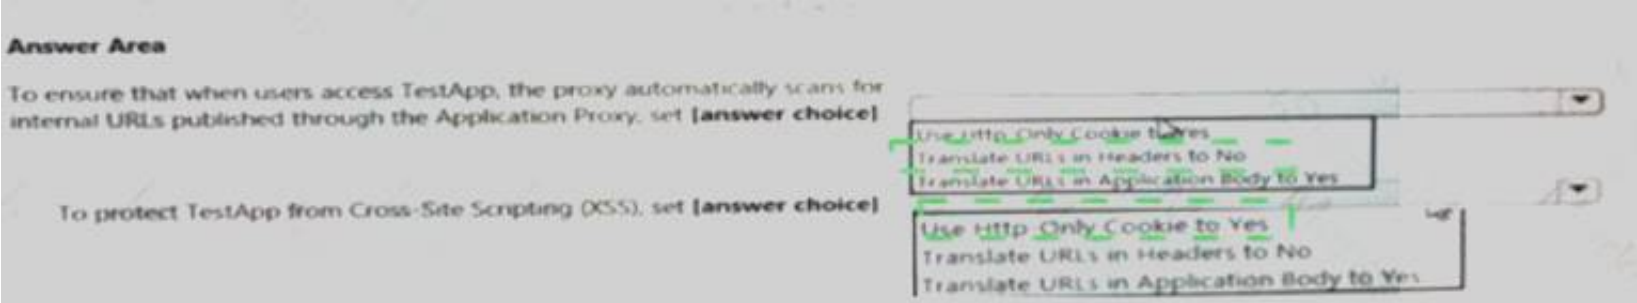

Use http-Only Cookie to Yes  
Translate URLs in Headers to No  
Translate URLs in Application Body to Yes

Use http-Only Cookie to Yes  
Translate URLs in Headers to No  
Translate URLs in Application Body to Yes

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

**NEW QUESTION 5**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain.  
You have a Microsoft 365 E5 subscription.  
You plan to implement directory synchronization.  
You need to identify potential synchronization issues for the domain. The solution must use the principle of least privilege.  
What should you use? To answer, select the appropriate options in the answer area.

Answer Area

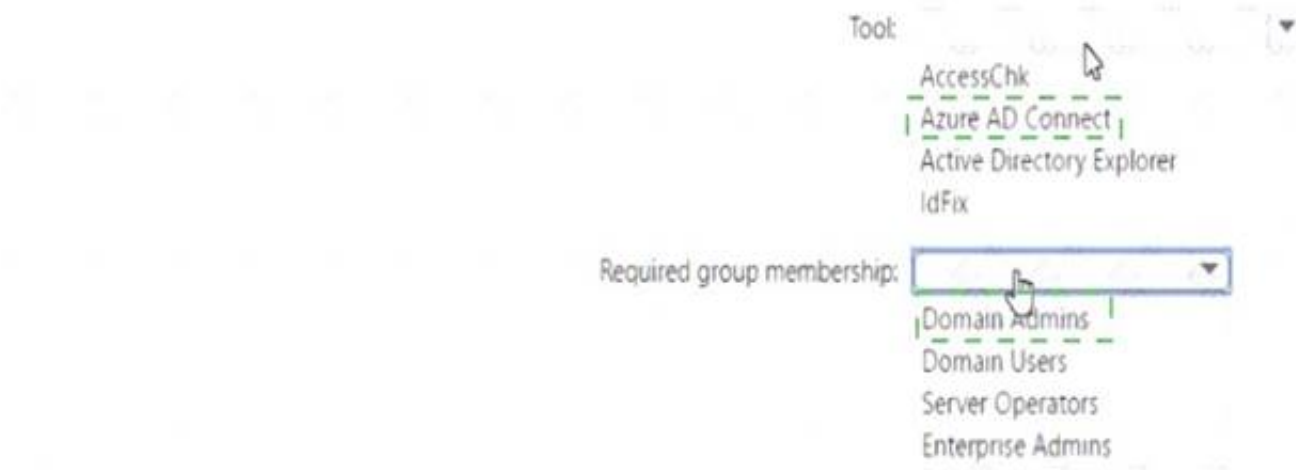

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

**NEW QUESTION 6**

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains the users shown in the following table.

Name	Email address
User1	User1@contoso.com
User2	User2@contoso.com
User3	User3@contoso.com

Microsoft Exchange Online has the mail flow rules shown in the following table

Name	Priority
Rule1	0
Rule2	1
Rule3	2

Rule1 has the following settings:

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input checked="" type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input checked="" type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 7

- (Exam Topic 5)

What should you add to a SharePoint Framework 5PFx) solution to ensure that the solution can be used as a Microsoft Teams tab?

- A. the TeamsTab value to the supportedHosts property in the manifest file
- B. a Teams manifest file to the config folder in the solution
- C. the TeamsTab value to the componentType property in the manifest file
- D. a webpart manifest file to the config folder in the solution

Answer: A

NEW QUESTION 8

- (Exam Topic 5)

You have a hybrid deployment of Microsoft 365 that contains the users shown in the following table.

Name	Member of
User1	Group2
User2	Group1, Group2
User3	Group1

You have an on-premises web app named AppA. Group1 has permissions to access AppA. You configure an Azure Active Directory (Azure AD) Application Proxy. You add an Application Proxy entry for AppA as shown the exhibit. (Click the Exhibit tab.)

Add your own on-premises application

+ Add

X Discard

Application proxy provides single sign-on (SSO) and secure remote access for web applications hosted on-premises. [Learn more about Application Proxy](#)

Basic Settings

Name \*

AppA

Internal Url \*

https://Server1.contoso.com

External Url

https://

https://appa-contoso1919.msappproxy.net/

Pre Authentication

Passthrough

Connector Group

Default

Additional Settings

Backend Application Timeout

Default

Use HTTP-Only Cookie

Yes

No

Use Secure Cookie

Yes

No

Use Persistent Cookie

Yes

No

Translate URLs In

Headers

Yes

No

Application Body

Yes

No

You assign the AppA enterprise application in Azure to Group2.  
For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can access AppA by using the external URL.	<input type="radio"/>	<input type="radio"/>
User2 can access AppA in the My Apps portal.	<input type="radio"/>	<input type="radio"/>
User3 can access AppA by using the external URL.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No  
User1 is in Group2. The enterprise app is assigned to Group2. However, the authentication method is “Passthrough” so the authentication will be passed to the on-premises web app. Only Group1 has access to the web app. Therefore, User1 will not be able to access the web app.  
Box 2: Yes.  
User2 is in Group1 and Group2. The enterprise app is assigned to Group2. The authentication method is “Passthrough” so the authentication will be passed to the on-premises web app. Group1 has access to the web app. Therefore, User2 will be able to access the web app in MyApps.  
Box 3: No  
User3 is in Group1. Group1 has access to the web app so User3 could access the app on-premises. However, the enterprise app is assigned to Group2 which User3 is not a member of. Therefore, User3 will not be able to access the external URL of the web app.

NEW QUESTION 9

- (Exam Topic 5)  
You have a Microsoft 365 subscription you use Active Directory (Azure AD) tenant named contoso.com. The tenant contains the Windows 10 devices shown in the following table.

Name	Version	Language
Device1	x86	German
Device2	x64	English
Device3	x64	French

All the devices are managed by using Microsoft Endpoint Manager and are members of a group named Group1.  
From the Microsoft Endpoint Manager admin center, you create an app suite named App1 for Microsoft Office 365 apps.  
You configure the App1 settings as shown in the exhibit. (Click the Exhibit tab.)

App Suite Settings

X

These settings apply to all apps you have selected in the suite.  
[Learn more](#)

Architecture \*  

32-bit64-bit

Update channel \*  

Semi-Annual

Version to install on end user devices. [Learn more](#)  

LatestSpecific

Specific version  
Latest version

Remove other versions of Office (MSI) from end user devices.  
[Learn more](#)  

YesNo

Automatically accept the app end user license agreement  

YesNo

Use shared computer activation  

YesNo

Languages  
German, OS Languages

You assign App1 to Group1.  
For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
Note: Each correct selection is worth one point.

Statements	Yes	No
On Device1, Office 365 ProPlus will be installed and the display language will be German.	<input type="radio"/>	<input type="radio"/>
On Device2, Office 365 ProPlus will be installed and both the German and English display languages will be installed.	<input type="radio"/>	<input type="radio"/>
On Device3, Office 365 ProPlus will be installed and both the German and French display languages will be installed.	<input type="radio"/>	<input type="radio"/>

- A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Box 1: No

Device1 is x86 (32-bit) so Office 365 will not be installed. Box 2: Yes

Device2 is x64 (64-bit) so Office 365 will be installed. The German language pack will be installed and the OS language pack (English) will be installed.

Box 3: Yes

Device2 is x64 (64-bit) so Office 365 will be installed. The German language pack will be installed and the OS language pack (French) will be installed.

Lab Instance: 11440873

You need to ensure that when Lynne Robbins attempts to sign in to the Microsoft Office 365 portal, Lynne Robbins is prompted to authenticate by using multiple methods.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

#### **Explanation:**

You need to enable Multi-Factor Authentication for Lynne Robbins.

- \* 1. Sign in to the Microsoft 365 Admin Center.
- \* 2. In the left navigation pane, expand the Users section and select Active Users.
- \* 3. Click the 'Multi-factor authentication' link.
- \* 4. Select Lynne Robbins.
- \* 5. In the right navigation pane, select the 'Enable' link to enable MFA for the account.
- \* 6. Confirm the setting by clicking the 'Enable multi-factor authentication' button.
- \* 7. Click the Close button to close the confirmation window.

#### NEW QUESTION 10

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWYjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

Your organization has an office in Seattle.

You plan to create 100 users who will work in the Seattle office. The city attribute for all the users will be Seattle.

You need to create a group named Group1 that will automatically contain all the Seattle office users.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to create a Dynamic group. User accounts with the city attribute set to 'Seattle' will automatically be added to the group.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Azure Active Directory then select Groups.
- \* 3. Click on the New Group link.
- \* 4. Give the group a name such as Seattle Users.
- \* 5. Select Users as the membership type.
- \* 6. Select 'Add dynamic query'.
- \* 7. Select 'City' in the Property drop-down box.
- \* 8. Select 'Equals' in the Operator drop-down box.
- \* 9. Enter Seattle as the Value. You should see the following text in the Expression box: user.city -eq "Seattle"
- \* 10. Click Save to create the group. References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/groups-dynamic-membership>

**NEW QUESTION 13**

- (Exam Topic 5)

You are developing an app that will query the tenant for the names of all the Microsoft Teams teams in the organization. What permission will the app require?

Your solution must follow the principle of least privilege.

- A. Grou
- B. Rea
- C. All
- D. Directory.Read.All
- E. Channel.ReadBasic.All
- F. TeamSettings.Read.All

**Answer:** D

**NEW QUESTION 16**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

All users have their email stored in Microsoft Exchange Online

In the mailbox of a user named User, you need to preserve a copy of all the email messages that contain the word ProjectX.

What should you do first?

- A. From the Exchange admin center, start a mail flow message trace.
- B. From the Security & Compliance admin center, start a message trace.
- C. From the Security & Compliance admin center, create a label and label policy.
- D. From the Exchange admin center, create a mail flow rule.

**Answer:** C

**Explanation:**

When you configure conditions for a label, you can automatically assign a label to a document or email. In this case, we would create a label to label all email messages that contain the word ProjectX. We would then create a label policy to preserve a copy of all message that have the label assigned.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/configure-policy-classification>

**NEW QUESTION 21**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- \* Users must be able to authenticate during business hours only.
- \* Authentication requests must be processed successfully if a single server fails.
- \* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- \* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

## NEW QUESTION 22

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

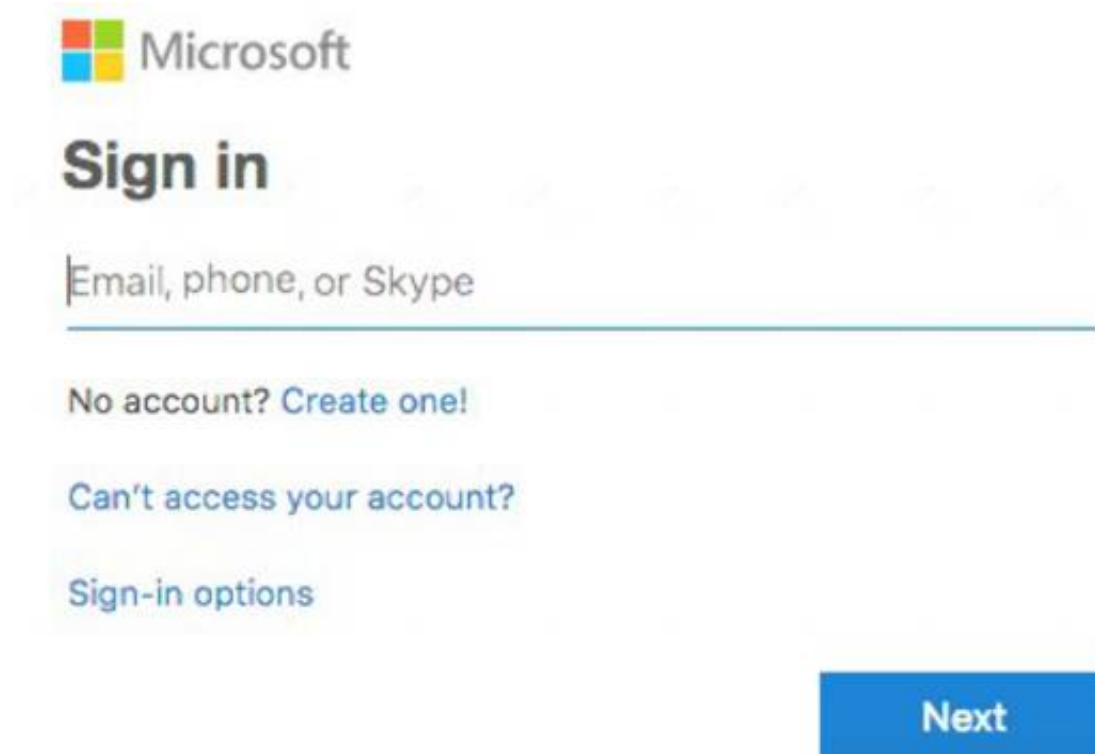

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

Your organization recently purchased a projector that can be moved easily between conference rooms. You need to ensure that any user in the organization can add the projector to a Microsoft Outlook meeting

request. The solution must ensure that a user named Lee Gu must approve all meeting requests.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer: A**

### Explanation:

You need to create a resource mailbox in Exchange.

- \* 1. Go to the Exchange Admin Center.
- \* 2. In the left navigation pane, select Recipients.
- \* 3. Click the Resources link.
- \* 4. Click the plus (+) icon and select 'Equipment Mailbox'.
- \* 5. Give the mailbox a name such as 'Projector1'.
- \* 6. Enter the name projector1 in the email address field.
- \* 7. Click the Save button to create the equipment mailbox.
- \* 8. In the resource mailbox list, select the new mailbox and click the Edit icon (pencil icon).
- \* 9. Select 'Booking Delegates' in the menu list.
- \* 10. Select the option, "Select delegates who can accept or decline booking requests".
- \* 11. Click the plus (+) icon and add Lee Gu as a delegate.
- \* 12. Click the Save button to save the changes.

## NEW QUESTION 25

- (Exam Topic 5)

You have a Microsoft Teams app that contains a conversational bot. The bot uses task modules to reply to users. When the bot receives a new message, the following code is executed before a response is sent back to the user to decide whether the bot should continue the conversation.

```

80 case "task/submit": {
81   if (invokeValue.data !== undefined) {
82     switch (invokeValue.data.taskResponse) {
83       case "message":
84         session.send(`task/submit results from the Adaptive card: ${JSON.stringify(invokeValue)} `);
85         break;
86       case "continue":
87         let fetchResponse = fetchTemplates.submitResponse;
88         fetchResponse.task.value.card = renderACAttachment(cardTemplates.acSubmitResponse, { results: JSON.stringify(invokeValue.data) });
89         cb(null, fetchResponse, 200);
90         break;

```

Answer Area

If invokeValue.data.taskResponse equals "message", the user will [answer choice]

stop interacting with the bot.  
continue interacting with the bot.  
receive a webpage pop-up window.  
receive a

These are the selections for the statement If invokeValue.data.taskResponse equals "message" the user will [answer choice]

If invokeValue.data.taskResponse equals "final", the user will [answer choice]

stop interacting with the bot.  
continue interacting with the bot.  
receive a webpage pop-up window.  
receive a final message from the bot.

These are the selections for the statement If invokeValue.data.taskResponse equals "final" the user will [answer choice]

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Reference:

<https://github.com/OfficeDev/microsoft-teams-sample-task-module-nodejs>

**NEW QUESTION 28**

- (Exam Topic 5)

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD). Currently, App1 can read user profile information. You need to allow App1 to read the user's calendar.

Solution: Add https://graph.windows.net/user, read to the list of scopes during the initial login request Does this meet the goal?

- A. Yes
- B. No

Answer: B

**NEW QUESTION 29**

- (Exam Topic 5)

You have three devices enrolled in Microsoft Intune as shown in the following table.

Name	Platform	BitLocker Drive Encryption (BitLocker)	Member of
Device1	Windows 10	Disabled	Group3
Device2	Windows 10	Disabled	Group2, Group3
Device3	Windows 10	Disabled	Group2

The device compliance policies in Intune are configured as shown in the following table.

Name	Platform	Require BitLocker	Assigned
Policy1	Windows 10 and later	Require	Yes
Policy2	Windows 10 and later	Not configured	Yes
Policy3	Windows 10 and later	Require	No

The device compliance policies have the assignment shown in the following table.

Name	Assigned to
Policy1	Group3
Policy2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
Device1 is compliant.	<input type="radio"/>	<input type="radio"/>
Device2 is compliant.	<input type="radio"/>	<input type="radio"/>
Device3 is compliant.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

**Explanation:**

Device 1:  
No because Device1 is in group3 which has Policy1 assigned which requires BitLocker. Device 2:  
No because Device2 is in group3 which has Policy1 assigned which requires BitLocker. Device2 is also in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.  
Device3:  
Yes because Device3 is in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.

Exit

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

If you create a security group in Azure AD, the group will [answer choice].

not sync to adatum.com

sync to adatum.com as a security group

sync to adatum.com as a distribution group

If you join a computer to Azure AD, the object will [answer choice].

not sync to adatum.com

sync to the Computers container in adatum.com

sync to the LostAndFound container in adatum.com

sync to the RegisteredDevices container in adatum.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Group Writeback is enabled in the Azure AD Connect configuration so groups created in Azure Active Directory will be synchronized to the on-premise Active Directory. A security group created in Azure Active Directory will be synchronized to the on-premise Active Directory as a security group. Device Writeback is enabled in the Azure AD Connect configuration so computers joined to the Azure Active Directory will be synchronized to the on-premise Active Directory. They will sync to the RegisteredDevices container in the on-premise Active Directory.  
Reference:  
<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-device-writeback>

NEW QUESTION 35

- (Exam Topic 5)  
Your company has a Microsoft 365 subscription that contains the following domains: Contoso.onmicrosoft.com  
Contoso.com  
You plan to add the following domains to Microsoft 365 and to use them with Exchange Online:  
> Sub1.contoso.onmicrosoft.com  
> Sub2.contoso.com  
> Fabrikam.com

You need to identify the minimum number of DNS records that must be added for Exchange Online to receive inbound email messages for the three domains. How many DNS records should you add? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

MX records:

0
1
2
3

CNAME records:

0
1
2
3

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: 2

You don't need to verify Sub1.contoso.onmicrosoft.com because the onmicrosoft.com domain and DNS is managed by Microsoft. You also don't need to configure an MX record for Sub1.contoso.onmicrosoft.com because that will be done by Microsoft.

For sub2.contoso.com, you don't need to verify the domain because you have already verified its parent domain contoso.com. However, you do need an MX record to direct email for that domain to Exchange Online.

For Fabrikam.com, you will need to verify the domain. You will need an MX record to direct email for that domain to Exchange Online.

Box 2: 0

You 'should' create CNAME records for autodiscover to point your email clients to Exchange Online to connect to the mailboxes. However, you don't have to. You could configure the email client manually. Therefore, the minimum number of CNAME records required is zero.

**NEW QUESTION 36**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

Your company deploys an Active Directory Federation Services (AD FS) solution. You need to configure the environment to audit AD FS user authentication. Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. From all the AD FS servers, run audltpol.exe.
- B. From all the domain controllers, run the set-AdminAuditLogConfig cmdlet and specify the -LogiLevel parameter.
- C. On a domain controller install Azure AD Connect Health for AD DS.
- D. From the Azure AO Connect server, run the Register-AzureADConnectHealthSyncAgent cmdlet.
- E. On an server, install Azure AD Connect Health for AD FS.

**Answer:** DE

**Explanation:**

To audit AD FS user authentication, you need to install Azure AD Connect Health for AD FS. The agent should be installed on an AD FS server. After the installation, you need to register the agent by running the Register-AzureADConnectHealthSyncAgent cmdlet.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-agent-install> <https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-adfs>

**NEW QUESTION 37**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

[Sign-in options](#)

Next

You need to prevent all the users in your organization from sending an out of office reply to external users. To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

### Explanation:

You need to modify the default remote domain. When you add a remote domain, you specify the domain name and the settings apply to that domain. The default remote domain applies to all other domains. Therefore, we need to disable Out of Office replies for external users in the settings of the default remote domain.

- \* 1. Go to the Exchange Admin Center.
- \* 2. Click Mail Flow in the left navigation pane.
- \* 3. Click on Remote Domains.
- \* 4. Select the default remote domain and click the Edit icon (pencil icon).
- \* 5. In the 'Out of Office automatic reply types' section, select 'None'.
- \* 6. Click Save to save to changes to the default remote domain.

### NEW QUESTION 40

- (Exam Topic 5)

Your network contains three Active Directory forests.

You create a Microsoft Azure Active Directory (Azure AD) tenant. You plan to sync the on premises Active Directory (Azure AD).

You need to recommend a synchronization solution. The solution must ensure that the synchronization can complete successfully and as quickly as possible if a single server fails.

What should you include in the recommendation?

- A. Three Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode
- B. One Azure AD Connect sync servers one Azure AD Connect sync servers in staging mode
- C. Three Azure AD Connect sync servers and one Azure AD Connect sync servers in staging mode
- D. six Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode

**Answer:** B

### Explanation:

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom>

### NEW QUESTION 44

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:

- > Password Hash Sync: Enabled
- >

Password writeback: Enabled

➤ Group writeback: Enabled

You need to add User2 to Group 2.

Solution: You use the Security & Compliance admin center. Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

#### NEW QUESTION 46

- (Exam Topic 5)

Your company has a Microsoft 365 E5 subscription. Users in the research department work with sensitive data.

You need to prevent the research department users from accessing potentially unsafe websites by using hyperlinks embedded in email messages and documents.

Users in other departments must not be restricted. What should you do from the Security & Compliance admin center?

- A. Create a data loss prevention (DLP) policy that has a Content contains condition.
- B. Create a data loss prevention (DLP) policy that has a Content is shared condition.
- C. Modify the default safe links policy.
- D. Create a new safe links policy.

**Answer: D**

#### Explanation:

ATP Safe Links, a feature of Office 365 Advanced Threat Protection (ATP), can help protect your organization from malicious links used in phishing and other attacks. If you have the necessary permissions for the Office 365 Security & Compliance Center, you can set up ATP Safe Links policies to help ensure that when people click web addresses (URLs), your organization is protected. Your ATP Safe Links policies can be configured to scan URLs in email and URLs in Office documents.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/set-up-atp-safe-links-policies#policies-that-apply>

#### NEW QUESTION 51

- (Exam Topic 5)

You have a Microsoft 365 Enterprise subscription.

You have a conditional access policy to force multi factor authentication when accessing Microsoft SharePoint from a mobile device

You need to view which users authenticated by using multi factor authentication. What should you do?

- A. From the Microsoft 365 admin center, view the Security Compliance reports.
- B. From the Azure Active Directory admin center, view the user sign-ins.
- C. From the Microsoft 365 admin center, view the Usage reports.
- D. From the Azure Active Directory admin center, view the audit logs.

**Answer: B**

#### Explanation:

With the sign-ins activity report in the Azure portal, you can get the information you need to determine how your environment is doing.

The sign-ins report can provide you with information about the usage of managed applications and user sign-in activities, which includes information about multi-factor authentication (MFA) usage. The MFA data gives you insights into how MFA is working in your organization

References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-reporting>

#### NEW QUESTION 56

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant.

The on-premises network contains a file server named Server1. Server1 has a share named Share1 that contains company documents.

Your company purchases a Microsoft 365 subscription.

You plan to migrate data from Share1 to Microsoft 365. Only data that was created or modified during the last three months will be migrated.

You need to identify all the files in Share1 that were modified or created during the last 90 days. What should you use?

- A. Server Manager
- B. Microsoft SharePoint Migration Tool
- C. Resource Monitor
- D. Usage reports from the Microsoft 365 admin center

**Answer: B**

#### Explanation:

You can use the Microsoft SharePoint Migration Tool to migrate files from a file server to SharePoint Online. The Microsoft SharePoint Migration Tool has a number of filters you can use to define which files will be

migrated. One filter setting is "Migrate files modified after". This setting will only migrate files modified after the selected date.

The first phase of a migration is to perform a scan of the source files to create a manifest of the files that will be migrated. You can use this manifest to identify all the files in Share1 that were modified or created during the last 90 days.

References:

<https://docs.microsoft.com/en-us/sharepointmigration/spmt-settings>

#### NEW QUESTION 58

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain. You have a Microsoft 365 subscription.

You implement a directory synchronization solution that uses pass-through authentication.  
 You configure Microsoft Azure Active Directory (Azure AD) smart lockout as shown in the following exhibit.

 Save  Discard

---

### Custom smart lockout

Lockout threshold ⓘ

Lockout duration in seconds ⓘ

### Custom banned passwords

Enforce custom list ⓘ Yes No

Custom banned password list ⓘ

password

PaSSw0rd

Pa55w0rd

Contoso

### Password protection for Windows Server Active Directory

Enable password protection on Windows Server Active Directory ⓘ Yes No

Mode ⓘ Enforced Audit

You discover that Active Directory users can use the passwords in the custom banned passwords list. You need to ensure that banned passwords are effective for all users.

Which three actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. From a domain controller, install the Azure AD Password Protection Proxy.
- B. From a domain controller, install the Microsoft AAD Application Proxy connector.
- C. From Custom banned passwords, modify the Enforce custom list setting.
- D. From Password protection for Windows Server Active Directory, modify the Mode setting.
- E. From all the domain controllers, install the Azure AD Password Protection DC Agent.
- F. From Active Directory, modify the Default Domain Policy.

**Answer:** ACE

**Explanation:**

References:

Azure AD password protection is a feature that enhances password policies in an organization. On-premises deployment of password protection uses both the global and custom banned-password lists that are stored in Azure AD. It does the same checks on-premises as Azure AD does for cloud-based changes. These checks are performed during password changes and password reset scenarios.

You need to install the Azure AD Password Protection Proxy on a domain controller and install the Azure AD Password Protection DC Agent on all domain controllers. When the proxy and agent are installed and configured, Azure AD password protection will work.

In the exhibit, the password protection is configured in Audit mode. This is used for testing. To enforce the configured policy, you need to set the password protection setting to Enforced.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises-de> <https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad-on-premises>

**NEW QUESTION 62**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

You need to create a policy that allows a user named Lee Gu to use Outlook Web App to review 50 percent of the outbound email messages sent by a user named Joni Sherman.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to configure a Supervision Policy.

- \* 1. Go to <https://protection.office.com> or navigate to the Security & Compliance admin center.
- \* 2. In the left navigation pane, select Supervision.
- \* 3. Click the '+Create' button to create a new supervision policy.
- \* 4. Give the policy a name such as 'Joni Sherman' and click Next.
- \* 5. In the 'Supervised users' section, click '+Add users or groups'.
- \* 6. Select Joni Sherman from the users list and click the Add button.
- \* 7. Deselect the 'Teams chats' and 'Skype for Business Conversations' checkboxes leaving only the 'Exchange Email' checkbox ticked and click Next.
- \* 8. Under 'Direction is', deselect Inbound leaving only Outbound selected and click Next.
- \* 9. In the 'Percentage to review' section, enter 50 and click Next.
- \* 10. In the 'Reviewers' section, start typing Lee Gu then select his account when it appears.
- \* 11. Click Next.
- \* 12. On the 'Review your settings' page, check the settings are correct then click the Finish button to create the policy.

**NEW QUESTION 65**

- (Exam Topic 5)

You plan to deploy Microsoft Teams to 2,500 users.

You need to estimate the internet bandwidth required for the deployment. What should you use?

- A. Advisor for Teams
- B. Network planner
- C. Skype for Business Server Remote Connectivity Test
- D. Microsoft Remote Connectivity Analyzer

**Answer:** B

**Explanation:**

From: <https://docs.microsoft.com/en-us/microsoftteams/network-planner>

Network Planner is a new tool that is available in the Teams admin center. It can be found by going to Planning > Network planner. In just a few steps, the Network Planner can help you determine and organize network requirements for connecting Microsoft Teams users across your organization. When you provide your network details and Teams usage, the Network Planner calculates your network requirements for deploying Teams and cloud voice across your organization's physical locations.

**NEW QUESTION 70**

- (Exam Topic 5)

HOTSPOT

Your company has a Microsoft 365 subscription that contains the domains shown in the following exhibit.

<a href="#">+ Add domain</a>	<a href="#">+ Buy domain</a>	View	All domains ▾	<input type="text" value="Search domains"/>
Domain name		Status		
Contoso20198.onmicrosoft.com (Default)		Setup complete		
Contoso.com		Setup in progress		
	East.Contoso20198.onmicrosoft.com	Possible service issues		

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

Answer Area

An administrator can create usernames that contain the [answer choice].

Contoso20198.onmicrosoft.com domain only

Contoso20198.onmicrosoft.com domain and all its subdomains only

Contoso20198.onmicrosoft.com and East Contoso20198.onmicrosoft.com domains only

Contoso20198.onmicrosoft.com, East Contoso20198.onmicrosoft.com, and Contoso.com domains

Exchange Online can receive inbound email messages sent to the [answer choice].

Contoso20198.onmicrosoft.com domain only

Contoso20198.onmicrosoft.com domain and all its subdomains only

Contoso20198.onmicrosoft.com and East Contoso20198.onmicrosoft.com domains only

Contoso20198.onmicrosoft.com, East Contoso20198.onmicrosoft.com, and Contoso.com domains

- A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Only the Contoso20198.onmicrosoft.com domain has a status of Setup Complete. The other two statuses mean that the domain setup is not complete or has issues that need to be corrected before they can be used.

Reference:

<https://support.office.com/en-gb/article/what-do-domain-statuses-mean-in-office-365-3ecf1fef-3b31-497c-98bc>

NEW QUESTION 75

- (Exam Topic 5)

Your network contains an Active Directory forest. The forest contains two domains named contoso.com and adatum.com.

Your company recently purchased a Microsoft 365 subscription. You deploy a federated identity solution to the environment.

You use the following command to configure contoso.com for federation. Convert-MsolDomainToFederated –DomainName contoso.com

In the Microsoft 365 tenant, an administrator adds and verifies the adatum.com domain name. You need to configure the adatum.com Active Directory domain for federated authentication.

Which two actions should you perform before you run the Azure AD Connect wizard? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From Windows PowerShell, run the Convert-MsolDomainToFederated–DomainName contoso.com –SupportMultipleDomain command.  
B. From Windows PowerShell, run the New-MsolFederatedDomain–SupportMultipleDomain -DomainName contoso.com command.  
C. From Windows PowerShell, run the New-MsolFederatedDomain-DomainName adatum.com command.  
D. From Windows PowerShell, run the Update-MSOLFederatedDomain–DomainName contoso.com –SupportMultipleDomain command.  
E. From the federation server, remove the Microsoft Office 365 relying party trust.

Answer: AE

Explanation:

When the Convert-MsolDomainToFederated –DomainName contoso.com command was run, a relying party trust was created.

Adding a second domain (adatum.com in this case) will only work if the SupportMultipleDomain switch was used when the initial federation was configured by running the Convert-MsolDomainToFederated –DomainName contoso.com command.

Therefore, we need to start again by removing the relying party trust then running the Convert-MsolDomainToFederated command again with the SupportMultipleDomain switch.

NEW QUESTION 80

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.

A temporary employee at your company uses an email address of user1@outlook.com.

You need to ensure that the temporary employee can sign in to contoso.com by using the user1@outlook.com account.

What should you do?

- A. From the Azure Active Directory admin center, create a new user.
- B. From the Microsoft 365 admin center, create a new contact.
- C. From the Azure Active Directory admin center, create a new guest user.
- D. From the Microsoft 365 admin center, create a new user.

**Answer: C**

**Explanation:**

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

**NEW QUESTION 82**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You need to prevent phishing email messages from being delivered to your organization. What should you do?

- A. From the Exchange admin center, create an anti-malware policy.
- B. From Security & Compliance, create a DLP policy.
- C. From Security & Compliance, create a new threat management policy.
- D. From the Exchange admin center, create a spam filter policy.

**Answer: C**

**Explanation:**

Anti-phishing protection is part of Office 365 Advanced Threat Protection (ATP). To prevent phishing email messages from being delivered to your organization, you need to configure a threat management policy.

ATP anti-phishing is only available in Advanced Threat Protection (ATP). ATP is included in subscriptions, such as Microsoft 365 Enterprise, Microsoft 365 Business, Office 365 Enterprise E5, Office 365 Education A5, etc.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/set-up-anti-phishing-policies>

**NEW QUESTION 85**

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.

You have three applications App1, App2, App3. The Apps use files that have the same file extensions. Your company uses Windows Information Protection (WIP).

WIP has the following configurations:

- Windows Information Protection mode: Silent
- Protected apps: App1
- Exempt apps: App2

From App1, you create a file named File1.

What is the effect of the configurations? To answer, select the appropriate options in the answer area.

You can open File1 from:

<input type="checkbox"/>
App1 only
App1 and App2 only
App1 and App3 only
App1, App2, and App3

An action will be logged when you attempt to open File1 from:

<input type="checkbox"/>
App1 only
App3 only
App1 and App2 only
App2 and App3 only
App1, App2, and App3

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Exempt apps: These apps are exempt from this policy and can access corporate data without restrictions.

Windows Information Protection mode: Silent: WIP runs silently, logging inappropriate data sharing, without stopping anything that would've been prompted for employee interaction while in Allow overrides mode. Unallowed actions, like apps inappropriately trying to access a network resource or WIP-protected data, are still stopped.

Reference:

<https://docs.microsoft.com/en-us/intune/apps/windows-information-protection-policy-create> <https://docs.microsoft.com/en-us/windows/security/information-protection/windows-information-protection/crea>

**NEW QUESTION 90**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.  
Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

**PROVISION FROM ACTIVE DIRECTORY**

**Azure AD Connect cloud provisioning**

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

**Azure AD Connect sync**

Sync Status	Enabled
Last Sync	Less than 1 hour ago
Password Hash Sync	Enabled

**USER SIGN-IN**

<a href="#">Federation</a>	Disabled	0 domains
<a href="#">Seamless single sign-on</a>	Enabled	1 domain
<a href="#">Pass-through authentication</a>	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.  
Solution: From the Azure Active Directory admin center, you add fabrikam.com as a custom domain. You instruct User2 to sign in as user2@fabrikam.com.  
Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

The on-premises Active Directory domain is named contoso.com. To enable users to sign on using a different UPN (different domain), you need to add the domain to Microsoft 365 as a custom domain.

**NEW QUESTION 95**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.  
Your network contains an Active Directory domain.  
You deploy a Microsoft Azure Active Directory (Azure AD) tenant. Another administrator configures the domain to synchronize to Azure AD.  
You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.  
You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.  
You need to ensure that the 10 user accounts are synchronized to Azure AD.  
Solution: From the Synchronization Rules Editor, you create a new outbound synchronization rule. Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

The question states that “all the user account synchronizations completed successfully”. Therefore, the synchronization rule is configured correctly. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.  
Reference:  
<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

**NEW QUESTION 96**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription.

You need to ensure that users are prompted for multi-factor authentication (MFA) when they attempt to access Microsoft SharePoint Online resources. Users must NOT be prompted for MFA when they attempt to access other Microsoft 365 services.

What should you do?

- A. From the Microsoft Endpoint Manager admin center, create an app protection policy.
- B. From the multi-factor authentication page, configure the users settings.
- C. From the Azure Active Directory admin center, create a conditional access policy.
- D. From the Cloud App Security admin center, create an app access policy.

**Answer: C**

**Explanation:**

Multi-factor authentication (MFA) is configured through conditional access policies. Reference:

<https://docs.microsoft.com/en-us/appcenter/general/configuring-aad-conditional-access>

**NEW QUESTION 97**

- (Exam Topic 5)

Your company has 500 client computers that run Windows 10.

You plan to deploy Microsoft Office 365 ProPlus to all the computers. You create the following XML file for the planned deployment.

```
<Configuration>
  <Add OfficeClientEdition="64" Channel="Broad" ForceUpgrade="TRUE">
    <Product ID="0365ProPlusRetail">
      <Language ID="en-us"/>
      <ExcludeApp ID="Groove"/>
      <ExcludeApp ID="Publisher"/>
    </Product>
  </Add>
  <Updates Enabled="TRUE" Channel="Broad" Deadline="03/31/2019, 00:00"
UpdatePath="\\sccm\updates"/>
  <Display Level="Full" AcceptEULA="TRUE"/>
  <Property Name="FORCEAPPSHUTDOWN" Value="TRUE"/>
  <Property Name="SharedComputerLicensing" Value="0"/>
  <Property Name="PinIconsToTaskbar" Value="TRUE"/>
</Configuration>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

When the installation is complete [answer choice].	<div>▼</div> <div>all users will be prompted to accept the EULA</div> <div>all users will be prompted to install several updates</div> <div>all semi-channel updates will be installed automatically</div>
Office 365 ProPlus will [answer choice].	<div>▼</div> <div>include Microsoft OneDrive for Business and Microsoft Outlook only</div> <div>be installed on all the computers</div> <div>be installed only on the computers that run a 64-bit version of Windows 10</div>

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Box 1:

When the installation is complete, all users will be prompted to install several updates.

In the configuration file, the Updates Enabled element is set to True. This means that Office will check for updates after the installation.

The Channel element set to Broad means that all semi-annual channel updates will be installed. Box 2:

Office 365 ProPlus will be installed only on the computers that run a 64-bit version of Windows 10.

The OfficeClientEdition element defines whether the 32-bit or 64-bit edition of Office 365 ProPlus is downloaded or installed. In the configuration file, it is set to '64'. The 64-bit version will only install on a 64-bit client computer.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool>

**NEW QUESTION 98**

- (Exam Topic 5)

You have several Microsoft SharePoint document libraries in your on-premises environment. You have a Microsoft 365 tenant that has directory synchronization implemented.

You plan to move all the document libraries to SharePoint Online.

You need to recommend a migration strategy for the document libraries.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

### Actions

Use the SharePoint Migration Tool to migrate the SharePoint data.

Create new SharePoint sites.

Run azcopy.exe to migrate the SharePoint data.

Create a Microsoft Azure Storage account.

Create new SharePoint libraries.

### Answer Area

- A. Mastered  
B. Not Mastered

**Answer:** A

#### Explanation:

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- > SharePoint Server 2013
- > SharePoint Server 2010
- > Network and local file shares

The first step is to create new SharePoint sites in SharePoint online. These sites will host the document libraries which will host the migrated content.

The second step is to create the document libraries in the SharePoint sites to host the migrated content. The final step is to use the SharePoint Migration Tool to migrate the content.

Reference:

<https://docs.microsoft.com/en-us/sharepointmigration/how-to-use-the-sharepoint-migration-tool>

#### NEW QUESTION 99

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains several Microsoft SharePoint Online sites. You discover that users from your company can invite external users to access files on the SharePoint sites. You need to ensure that the company users can invite only authenticated guest users to the sites. What should you do?

- A. From the Microsoft 365 admin center, configure a partner relationship.  
B. From SharePoint Online Management Shell, run the set-SPOSite cmdlet.  
C. From the Azure Active Directory admin center, configure a conditional access policy.  
D. From the SharePoint admin center, configure the sharing settings.

**Answer:** D

#### Explanation:

You need to set the Sharing settings to 'Existing Guests'. This setting allows sharing only with guests who are already in your directory. These guests may exist in your directory because they previously accepted sharing invitations or because they were manually added.

Reference:

<https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off>

#### NEW QUESTION 103

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to provide several users in your organization with the ability to join their Windows 10 device to Microsoft Azure Active Directory (Azure AD).

You need to ensure that all the users who join a device use multi-factor authentication.

- A. Mastered

B. Not Mastered

Answer: A

Explanation:

You need to configure the device settings in Azure Active Directory.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Azure Active Directory.
- \* 3. Select Devices.
- \* 4. Select Device Settings.
- \* 5. Toggle the 'Require Multi-Factor Auth to join devices' setting to Yes.
- \* 6. Click Save to save the changes. References:  
<https://docs.microsoft.com/en-us/azure/active-directory/devices/device-management-azure-portal>

NEW QUESTION 106

- (Exam Topic 5)

You are developing a Microsoft Teams tab that will capture coordinates from mobile devices and send notifications to users. The relevant portion of the app manifest is shown in the App Manifest exhibit (Click the App Manifest tab.) The relevant portion of the JavaScript code for the tab is shown in the JavaScript exhibit (Click the JavaScript tab) While testing the tab, a user receives the message shown in the Message exhibit (Click the Message tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE; Each correct selection is worth one point.

Answer Area

Statements	Yes	No
If the user changes mobile devices after successfully using all the functionalities in the tab, the user will receive the message again.	<input type="radio"/>	<input type="radio"/>
If the user uses two different tenants on the same mobile device, the user will receive the message again.	<input type="radio"/>	<input type="radio"/>
If two users share the same mobile device, each user will receive the message when the user first uses the tab.	<input type="radio"/>	<input type="radio"/>

A. Mastered  
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
If the user changes mobile devices after successfully using all the functionalities in the tab, the user will receive the message again.	<input checked="" type="radio"/>	<input type="radio"/>
If the user uses two different tenants on the same mobile device, the user will receive the message again.	<input type="radio"/>	<input checked="" type="radio"/>
If two users share the same mobile device, each user will receive the message when the user first uses the tab.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 110

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.  
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. You need to add Adele Vance to a group named Managers. The solution must ensure that you can grant permissions to Managers.  
To answer, sign in to the Microsoft 365 portal.

A. Mastered  
B. Not Mastered

Answer: A

**Explanation:**  
You need to create a group named Managers and add Adele Vance to the group. To ensure that you can grant permissions to the Managers group, the group needs to be a Security Group.

- \* 1. Sign in to the Microsoft 365 Admin Center.
- \* 2. In the left navigation pane, expand the Groups section then select Groups.
- \* 3. Click the 'Add a group' link.
- \* 4. For the group type, select Security and click Next.
- \* 5. Enter 'Managers' in the Name field and click Next.
- \* 6. Click the 'Create Group' button to create the Managers group.
- \* 7. In the list of groups, select the Managers group.
- \* 8. Click the Members link.
- \* 9. Click the 'View all and manage members link'.
- \* 10. Click the 'Add Members' button.
- \* 11. Select Adele Vance and click the Save button.
- \* 12. Click the Close button to close the group page.

**NEW QUESTION 111**  
- (Exam Topic 5)

You implement Microsoft Azure Advanced Threat Protection (Azure ATP). You have an Azure ATP sensor configured as shown in the following exhibit. Updates

**Updates**

Domain controller restart during updates

?

OFF

NAME	TYPE	VERSION	AUTOM...	DELAYE...	STATUS
LON-DC1	Sensor	2.48.5521	<div>on</div>	<div>on</div>	Up to date

Save

How long after the Azure ATP cloud service is updated will the sensor update?

A. 1 hour  
B. 7 days  
C. 48 hours  
D. 12 hours  
E. 72 hours

Answer: E

**Explanation:**

References:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-whats-new> The exhibit shows that the sensor is configure for Delayed update. Given the rapid speed of ongoing Azure ATP development and release updates, you may decide to define a subset group of your sensors as a delayed update ring, allowing for a gradual sensor update process. Azure ATP enables you to choose how your sensors are updated and set each sensor as a Delayed update candidate. Sensors not selected for delayed update are updated automatically, each time the Azure ATP service is updated. Sensors set to Delayed update each service update.  
Reference:  
<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/sensor-update> are updated on a delay of 72 hours, following the official release of

**NEW QUESTION 116**

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains a guest user named User1. User1 is assigned the User administrator role. You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com is configured as shown in the following exhibit.

### External collaboration settings

Save

Discard

Guest users permissions are limited ⓘ

Yes

No

Admins and users in the guest inviter role can invite ⓘ

Yes

No

Members can invite ⓘ

Yes

No

Guests can invite ⓘ

Yes

No

### Collaboration restrictions

☒ Allow invitations to be sent to any domain (most inclusive)

☐ Deny invitations to the specified domains

☐ Allow invitations only to the specified domains (most restrictive)

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point.

User1 can [answer choice].

▼

open the Azure portal only

open the Azure portal and view users only

open the Azure portal, view users, and create new guest users only

open the Azure portal, view users, create new users, and create new guest users

All other guest users can [answer choice].

▼

open the Azure portal only

open the Azure portal and view users only

open the Azure portal, view users, and create new guest users only

open the Azure portal, view users, create new users, and create new guest users

- A. Mastered
- B. Not Mastered

Answer: A

**Explanation:**

Default permissions for guests are restrictive by default. Guests can be added to administrator roles, which grant them full read and write permissions contained in the role. There is one additional restriction available, the ability for guests to invite other guests. Setting Guests can invite to No prevents guests from inviting other guests. User1 is assigned the User Administrator role. Therefore, User1 can open the Azure portal, view users, create new users, and create new guest users. In the exhibit, the 'Guest user permissions are limited' is set to no. This means that guest users have the same permissions as members. However, the 'Guests

can invite' setting is set to No. Therefore, other guest users (all guest users except User1) can open the Azure portal and view users in the same way as member users can.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations> <https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions>

#### NEW QUESTION 121

- (Exam Topic 5)

Your company has an on premises Microsoft Exchange Server 2016 organization and a Microsoft 365 Enterprise subscription. You plan to migrate mailboxes and groups to Exchange Online.

You start a new migration batch.

Users report \*low performance when they use the on premises Exchange Server organization.

You discover that the migration is causing the slow performance.

You need to reduce the impact of the mailbox migration on the end-users. What should you do?

- A. Create a mail flow rule.
- B. Configure back pressure
- C. Modify the migration endpoint setting
- D. Create a throttling policy.

**Answer: C**

#### Explanation:

The migration is causing the slow performance. This suggests that the on-premise Exchange server is struggling under the load of copying the mailboxes to Exchange Online. You can reduce the load on the

on-premise server by reducing the maximum number of concurrent mailbox migrations. Migrating just a few mailboxes at a time will have less of a performance impact than migrating many mailboxes concurrently.

Reference:

<https://support.microsoft.com/en-gb/help/2797784/how-to-manage-the-maximum-concurrent-migration-batches>

#### NEW QUESTION 125

- (Exam Topic 5)

Your Network contains an on-premises Active Directory domain named contoso.local. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates a Microsoft Anne Active Directory (Azure AD) tenant named .contoso.onmicrosoft.com.

You plan to implement pass-through authentication.

You need to prepare the environment for the planned implementation of pass-through authentication. Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Modify the email address attribute for each user account.
- B. From the Azure portal, add a custom domain name.
- C. From Active Directory Domains and Trusts, add a UPN suffix.
- D. Modify the User logon name for each user account.
- E. From the Azure portal, configure an authentication method.
- F. From a domain controller, install an authentication Agent.

**Answer: BCF**

#### Explanation:

To implement pass-through authentication, you need to install and configure Azure AD Connect.

The on-premise Active Directory domain is named contoso.local. Before you can configure Azure AD Connect, you need to purchase a routable domain, for example, contoso.com.

You then need to add the domain contoso.com to Microsoft as a custom domain name.

The user accounts in the Active Directory domain need to be configured to use the domain name contoso.com as a UPN suffix. You need to add contoso.com to the Active Directory first by using Active Directory Domains and Trusts to add contoso.com add a UPN suffix. You can then configure each account to use the new UPN suffix.

An Authentication Agent is required on a domain controller to perform the authentication when pass-through authentication is used. When the custom domain and user accounts are configured, you can install and configure Azure AD Connect. An Authentication Agent is installed when you select the pass-through authentication option in the Azure AD Connect configuration or you can install the Authentication Agent manually.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-quick-start>

#### NEW QUESTION 127

- (Exam Topic 5)

You have an app that uses the Microsoft Graph API. The app will perform the following actions in sequence:

- Update a user's city to Redmond.
- Retrieve the current user's profile.

You need to implement batching for the app

Which HTTP methods should you use in the batch request? To answer, select the appropriate options in the answer area

NOTE: Each correct selection is worth one point.

Answer Area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:  
Answer Area

NEW QUESTION 129

- (Exam Topic 5)  
Your network contains an on-premises Active Directory domain named Contoso.com.  
Your company purchases a Microsoft 365 subscription and establishes a hybrid deployment of Azure Directory (Azure AD) by using password hash synchronization.  
You create a new user User10 on-premises and a new user named User20 in Azure AD. You need to identify where an administrator can reset the password of each new user. What should you identify? To answer select the appropriate option in the answer area. NOTE: Each correct selection is worth one point.

User10:

Azure AD only

On-premises Active Directory only

On-premises Active Directory or Azure AD

User20:

Azure AD only

On-premises Active Directory only

On-premises Active Directory or Azure AD

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:  
If a user account is created in the on-premise Active Directory and synchronized to Azure Active Directory, you can reset the password of the user account in the on-premise Active Directory only.  
If a user account is created in Azure Active Directory, you can reset the password of the user account in the Azure Active Directory only.

#### NEW QUESTION 134

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You need to be notified to your personal email address when a Microsoft Exchange Online service issue occurs.

What should you do?

- A. From the Microsoft Outlook client configure an Inbox rule.
- B. From the Exchange admin center create a contact.
- C. From the Microsoft 365 admin center, customize the Service health settings.
- D. From the Microsoft 365 admin center, update the technical contact details

**Answer:** A

#### NEW QUESTION 137

- (Exam Topic 5)

You are developing a Microsoft Teams app that will use an Azure function to send scheduled messages from a bot to users. What is required for the Teams app to send a proactive message to the users?

- A. The users must send at least one message to the bot.
- B. The bot must be approved in Azure Active Directory (Azure AD).
- C. The bot must be granted admin access to the users.
- D. The Teams app must be added for each user.

**Answer:** A

#### NEW QUESTION 141

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You upload several archive PST files to Microsoft 365 by using the Security & Compliance admin center. A month later, you attempt to run an import job for the PST files.

You discover that the PST files were deleted from Microsoft 365.

What is the most likely cause of the files being deleted? More than one answer choice may achieve the goal. Select the BEST answer.

- A. The PST files were corrupted and deleted by Microsoft 365 security features.
- B. PST files are deleted automatically from Microsoft 365 after 30 days.
- C. The size of the PST files exceeded a storage quota and caused the files to be deleted.
- D. Another administrator deleted the PST files.

**Answer:** B

#### Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/faqimporting-pst-files-to-office-365> You can use the Office 365 Import Service to bulk-import PST files to Office 365 mailboxes.

When you use the network upload method to import PST files, you upload them to an Azure blob container named ingestiondata. If there are no import jobs in progress on the Import page in the Security & Compliance Center), then all PST files in the ingestiondata container in Azure are deleted 30 days after the most recent import job was created in the Security & Compliance Center.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/faqimporting-pst-files-to-office-365>

#### NEW QUESTION 145

- (Exam Topic 5)

You have a bot named SupportBot that is registered to the Microsoft Bot Framework and deployed to the Azure Bot Service. The bot is configured as shown in the following table.

Attribute	Value
Name	SupportBot
Azure Bot Service endpoint address	<a href="https://supportbot.azurewebsites.net/api/messages">https://supportbot.azurewebsites.net/api/messages</a>
MicrosoftAppID	607209dd-d036-49c7-91fe-e54147b8d892
TeamsAppID	f66f0635-cbc1-4695-8c25-d76c20b5f883

SupportBot provides responses to user queries in Microsoft Teams conversations. You need to create an app manifest to deploy SupportBot to Microsoft Teams. How should you complete the manifest? To answer, select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer Area

```
"bots": [  
  {  
    "botId": "SupportBot",  
    "scopes": ["f66f0635-cbc1-4695-8c25-d76c20b5f883",  
              "607209dd-d036-49c7-91fe-e54147b8d892"],  
    "needsChannel": "https://supportbot.azurewebsites.net/api/messages",  
    "scopes": ["team", "groupchat"],  
    "needsChannel": ["team": "groupchat"],  
    "isNotification": ["personal", "groupchat"]  
  }  
]
```

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

```
"bots": [  
  {  
    "botId": "SupportBot",  
    "scopes": ["f66f0635-cbc1-4695-8c25-d76c20b5f883",  
              "607209dd-d036-49c7-91fe-e54147b8d892"],  
    "needsChannel": "https://supportbot.azurewebsites.net/api/messages",  
    "scopes": ["team", "groupchat"],  
    "needsChannel": ["team": "groupchat"],  
    "isNotification": ["personal", "groupchat"]  
  }  
]
```

**NEW QUESTION 150**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named conioso.com. for all user accounts, the Logon Hours settings are configured to prevent sign-ins outside of business hours You plan to sync contoso.com to an Azure Active Directory (Azure AD) tenant You need to recommend a solution to ensure that the logon hour restrictions apply when synced users sign in to Azure AD. What should you include in the recommendation?

- A. conditional access policies
- B. password synchronization
- C. pass-Through authentication
- D. Azure AD identity Protection policies

Answer: C

**NEW QUESTION 155**

- (Exam Topic 5)

You have a web app that uses the Microsoft identity Platform. You extend the application manifest to implement the following role-based access control (RBAC).

```
"appId": "8763f1c4-f988-489c-a51e-158e9ef97d6a",
"appRoles": [
  {
    "allowedMemberTypes": [
      "User"
    ],
    "displayName": "Read user access",
    "id": "9e46db32-d022-4e98-84cc-520a55ff9ba0",
    "isEnabled": true,
    "description": "Readers have the ability to read tasks.",
    "value": "Readers"
  },
  {
    "allowedMemberTypes": [
      "User"
    ],
    "displayName": "Write user access",
    "id": "9e46db32-d022-4e98-84cc-520a55ff9ba0",
    "isEnabled": false,
    "description": "Writers have the ability to write tasks."
    "value": "Writers"
  }
],
"availableToOtherTenants": false,
```

When you attempt to save the manifest you receive a validation error. Which key value pair should you modify to resolve the error?

- A. id
- B. isEnabled
- C. allowedMamberType
- D. appld

**Answer: B**

#### NEW QUESTION 157

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the objects shown in the following table.

Name	Configuration
Group1	Global security group
User1	Enabled user account
User2	Disabled user account

You configure Azure AD Connect to sync contoso.com to Azure Active Directory. Which objects will sync to Azure AD?

- A. Group1, Used, and User2
- B. Group1 and User1 only
- C. User1 and User2 only
- D. Group1 only

**Answer: A**

#### Explanation:

Global Security Group is a scope for the group and is set for created groups:

<https://docs.microsoft.com/en-us/windows/security/identity-protection/access-control/active-directory-security-g>

#### NEW QUESTION 162

- (Exam Topic 5)

Your company recently purchased a Microsoft 365 subscription.

You enable Microsoft Azure Multi-Factor Authentication (MFA) for all 500 users in the Azure Active Directory (Azure AD) tenant.

You need to generate a report that lists all the users who completed the Azure MFA registration process. What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From Azure Cloud Shell, run the Get-AzureADUser cmdlet.
- B. From Azure Cloud Shell, run the Get-MsolUser cmdlet
- C. From the Azure Active Directory admin center, use the MFA Server blade.
- D. From the Azure Active Directory admin center, use the Risky sign-ins blade.

**Answer: B**

#### Explanation:

You can use the Get-MsolUser cmdlet to generate a report that lists all the users who completed the Azure MFA registration process. The full command would look like this:

Get-MsolUser -All | Where-Object {\$\_.StrongAuthenticationMethods.Count -eq 0} | Select-Object -Property UserPrincipalName

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-reporting>

**NEW QUESTION 164**

- (Exam Topic 5)

You have a Microsoft 365 Enterprise subscription.

You have a conditional access policy to force multi-factor authentication when accessing Microsoft SharePoint from a mobile device.

You need to view which users authenticated by using multi-factor authentication. What should you do?

- A. From the Microsoft 365 admin center, view the Security & Compliance reports.
- B. From the Azure Active Directory admin center, view the user sign-ins.
- C. From the Microsoft 365 admin center, view the Usage reports.
- D. From the Azure Active Directory admin center, view the audit logs.

**Answer: B**

**Explanation:**

References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-reporting>

**NEW QUESTION 165**

- (Exam Topic 5)

You have a Microsoft 365 subscription. All users have client computers that run Windows 10 and have Microsoft Office 365 ProPlus installed.

Some users in the research department work for extended periods of time without an Internet connection. How many days can the research department users remain offline before they are prevented from editing Office documents?

- A. 10
- B. 30
- C. 90
- D. 120

**Answer: B**

**Explanation:**

After 30 days, Microsoft Office 365 ProPlus will go into reduced functionality mode. When this happens, users will be able to open files but they won't be able to edit them.

As part of the installation process, Office 365 ProPlus communicates with the Office Licensing Service and the Activation and Validation Service to obtain and activate a product key. Each day, or each time the user logs on to their computer, the computer connects to the Activation and Validation Service to verify the license status and extend the product key. As long as the computer can connect to the Internet at least once every 30 days, Office remains fully functional. If the computer goes offline for more than 30 days, Office enters reduced functionality mode until the next time a connection can be made.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/overview-of-licensing-and-activation-in-office-365-proplus>

**NEW QUESTION 170**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- \* Users must be able to authenticate during business hours only.
- \* Authentication requests must be processed successfully if a single server fails.
- \* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- \* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.

- A. Yes
- B. No

**Answer: B**

**NEW QUESTION 172**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

Name	Member of	Multi-Factor Auth Status
User1	Group1	Disabled
User2	Group1, Group2	Enabled
User3	Group2	Disabled

You configure a multi-factor authentication (MFA) registration policy that has the following settings: Assignments:

- Include: Group1
- Exclude: Group2

Access controls: Require Azure MFA registration

Enforce Policy: On

You create a conditional access policy that has the following settings: Name: Policy1

Assignments:

- Include: Group2
- Exclude: Group1 Access controls:
- Grant, Require multi-factor authentication Enable policy: On

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 will be required to use MFA on the next sign-in.	<input type="radio"/>	<input type="radio"/>
User2 will be required to use MFA on the next sign-in.	<input type="radio"/>	<input type="radio"/>
User3 will be required to use MFA on the next sign-in.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Graphical user interface, text, application Description automatically generated

Box 1: No

The MFA policy applies to User1 so he will be prompted to register for MFA. He has 14 days to complete the registration. During this 14-day period, he can bypass registration but at the end of the period he will be required to register before he can complete the sign-in process.

The Conditional Access Policy does not apply to User1 so MFA is not required. Box 2: No

User2's MFA status is Enabled which means he has been enrolled in MFA but has not yet completed the registration.

The Conditional Access Policy does not apply to User2 because Group1 is excluded so MFA is not required. Box 3: Yes

The Conditional Access Policy does apply to User3 so MFA will be required. He will need to be enrolled for MFA first.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-identity-protection-configure-> <https://docs.microsoft.com/en-us/microsoft-365/admin/security-and-compliance/set-up-multi-factor-authenticati>

**NEW QUESTION 176**

- (Exam Topic 5)

You are developing a mobile application that will display the current signed-in user's display name and the application settings. The application settings are stored as a Microsoft Graph extension of the user profile.

Users of the application have intermittent network connectivity

You need to retrieve the least amount of data by using a single REST request. The solution must minimize network traffic.

Which URI should you use to retrieve the data?

- A. [https://graph.microsoft.com/v1.0/me?Select=displayName,ids\\$expand=extensions](https://graph.microsoft.com/v1.0/me?Select=displayName,ids$expand=extensions)
- B. <https://graph.microsoft.com/v1.0/me>
- C. [https://graph.microsoft.com/v1.0/me?select=displayName,userType\\$expand=extensions](https://graph.microsoft.com/v1.0/me?select=displayName,userType$expand=extensions)
- D. <https://graph.microsoft.com/v1.0/me?Expand=extensions>

**Answer:** B

**NEW QUESTION 177**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

Alex Wilber must be able to reset the password of each user in your organization. The solution must prevent Alex Wilber from modifying the password of global administrators.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to assign the 'Password Administrator' role to Alex Wilber. A user assigned the Password Administrator role can reset passwords for non-

administrators and Password administrators.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Users.
- \* 3. Select the Alex Wilber account to open the account properties page.
- \* 4. Select 'Assigned roles'.
- \* 5. Click the 'Add Assignments' button.
- \* 6. Select Password Administrator then click the Add button. References:  
<https://docs.microsoft.com/en-us/office365/admin/add-users/about-admin-roles?view=o365-worldwide>

**NEW QUESTION 180**

- (Exam Topic 5)  
You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Name	Type	Member of
User1	User	Group1
User2	User	Group1, Group2
User3	User	Group1, Group2
User4	Guest User	Group2

User1 is the owner of Group1, User2 is the owner of Group2.  
You create an access review that contains the following configurations:

- \* Users to review, Member of a group
- \* Scope Everyone
- \* Group: Group1 and Group2
- \* Review Group owners

For each of the following statements, select Yes if the statement is true. Otherwise select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can review access for User2.	<input type="radio"/>	<input type="radio"/>
User1 can review access for User3.	<input type="radio"/>	<input type="radio"/>
User3 can review access for User4.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

**Explanation:**

Box 1: Yes  
User1 is the owner of Group1. User2 is in Group1 and Group2. Group owners can review access. Therefore, User1 can review User2's membership of Group1.  
Box 2: Yes  
User1 is the owner of Group1. User3 is in Group1 and Group2. Group owners can review access. Therefore, User1 can review User3's membership of Group1.  
Box 3: No  
Only group owners can review access. User3 is not a group owner. Therefore, User3 cannot review membership of the groups.  
References:  
<https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

**NEW QUESTION 183**

- (Exam Topic 5)  
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  
After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.  
Your company has a main office and three branch offices. All the branch offices connect to the main office by using a WAN link. The main office has a high-speed Internet connection. All the branch offices connect to the Internet by using the main office connection.  
Users use Microsoft Outlook 2016 to connect to 4 Microsoft Exchange Server mailbox hosted in the main office.  
The users report that when the WAN link in their office becomes unavailable, they cannot access their mailbox.  
You create a Microsoft 365 subscription, and then migrate all the user data to Microsoft 365.  
You need to ensure that all the users can continue to use Outlook to receive email messages if a WAN link fails.  
Solution: For each branch office, you add a direct connection to the Internet. Does this meet the goal?

- A. Yes
- B. NO

Answer: A

**NEW QUESTION 185**

- (Exam Topic 5)  
You have an on-premises Microsoft Exchange Server organization that contains 500 mailboxes and a third-party email archive solution.  
You have a Microsoft 365 tenant that contains a user named User1.  
You plan to use the User1 account to perform a PST import of the archive mailboxes to the tenant. Which two roles does User1 require to perform the import? The solution must use the principle of least privilege. Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. Mail Recipients
- B. Exchange admin
- C. Records Management
- D. Mailbox Import Export
- E. eDiscovery Manager

**Answer:** AD

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/microsoft-365/compliance/importing-pst-files-to-office-365?view=o365-world>

**NEW QUESTION 186**

- (Exam Topic 5)  
Your company has a Microsoft 365 subscription.  
Your plan to add 100 newly hired temporary users to the subscription next week. You create the user accounts for the new users.  
You need to assign licenses to the new users. Which command should you run?

- A. 

```
$NewStaff = Get-AzureADUser -All -Department "Temp" -UsageLocation "";  
$NewStaff | foreach {Set-AzureADUser -LicenseOptions "contoso:ENTERPRISEPACK"}
```
- B. 

```
$NewStaff = Get-AzureADUser -All -Department "Temp" -UsageLocation "US" -UnlicensedUsersOnly;  
$NewStaff | foreach {Set-AzureADUserLicense -AddLicenses "contoso:ENTERPRISEPACK"}
```
- C. 

```
$NewStaff = Get-AzureADUser -All -Department "Temp" -UsageLocation "";  
$NewStaff | foreach {Set-AzureADUserLicense -LicenseOptions "contoso:ENTERPRISEPACK"}
```
- D. 

```
$NewStaff = Get-AzureADUser -All -Department "Temp" -UsageLocation "US" -UnlicensedUsersOnly;  
$NewStaff | foreach {Set-AzureADUser -AddLicenses "contoso:ENTERPRISEPACK"}
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer:** B

**Explanation:**

The first line gets all users from the Temp department that have a UsageLocation assigned and stores them in the \$NewStaff variable. You cannot use PowerShell to assign a license to a user that does not have a UsageLocation configured.  
The second line adds the licenses to each user in the \$NewStaff variable. Reference:  
<https://docs.microsoft.com/en-us/office365/enterprise/powershell/assign-licenses-to-user-accounts-with-office-3>

**NEW QUESTION 188**

- (Exam Topic 5)  
You have a Microsoft 365 subscription.  
You are configuring permissions for Security & Compliance.  
You need to ensure that the users can perform the tasks shown in the following table.

Name	Task
User1	Download all Security & Compliance reports.
User2	Create and manage Security & Compliance alerts.

The solution must use the principle of least privilege.  
To which role should you assign each user? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

User1:

Records Management

Security Administrator

Security Reader

Supervisory Review

User2:

Compliance Administrator

Organization Management

Security Administrator

Security Reader

Supervisory Review

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Security Reader: Members can manage security alerts (view only), and also view reports and settings of security features.

Security Administrator, Compliance Administrator and Organization Management can manage alerts. However, Security Administrator has the least privilege.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/permissions-in-the-security-and-compliance-cen>

**NEW QUESTION 189**

- (Exam Topic 5)

Your company has an on-premises Microsoft Exchange Server 2013 organization. The company has 100 users.

The company purchases Microsoft 365 and plans to move its entire.- infrastructure to the cloud.

The company does NOT plan to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD).

You need to recommend which type of migration to use to move all email messages, contacts, and calendar items to Exchange Online.

What should you recommend?

- A. cutover migration
- B. IMAP migration
- C. remote move migration
- D. staged migration

**Answer:** A

**Explanation:**

References:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/cutover-migration-to-office-365>

A cutover migration and an IMAP migration do not require the company to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD). Only a cutover migration meets the requirements in this question.

With a cutover migration, user accounts will need to be created in Azure Active Directory for each user. The mailboxes are all migrated in one go and MX records configured to redirect email to Microsoft 365.

**NEW QUESTION 193**

- (Exam Topic 5)

You have a hybrid deployment of Microsoft 365 that contains the users shown in the following table. Azure AD Connect has the following settings:

Name	Source	Last sign in
User1	Azure Active Directory (Azure AD)	Yesterday
User2	Windows Server Active Directory	Two days ago
User3	Windows Server Active Directory	Never

- Password Hash Sync Enabled
- Pass-through authentication: Enabled

You need to identify which users will be able to authenticate by using Azure AD if connectivity between on-premises Active Directory and the internet is lost. Which users should you identify?

- A. none
- B. User 1 only
- C. User1 and User2 only
- D. User1, User2, and User3

**Answer:** C

**NEW QUESTION 195**

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses a default domain named litwareinc.com. The subscription has a Microsoft SharePoint site collection named Collection1.

From the Azure Active Directory admin center, you configure the External collaboration settings as shown in the External Collaboration Settings exhibit. (Click the External Collaboration Settings tab.)

External collaboration settings

Save

Discard

Guest users permissions are limited

Yes

No

Admins and users in the guest inviter role can invite

Yes

No

Members can invite

Yes

No

Guests can invite

Yes

No

Enable Email One-Time Passcode for guests (Preview)

Learn more

Yes

No

Collaboration restrictions

Allow invitations to be sent to any domain (most inclusive)

Deny invitations to the specified domains

Allow invitations only to the specified domains (most restrictive)

Delete

TARGET DOMAINS

fabrikam\*.com

example.com or \*example.com or example.\*

From the SharePoint admin center, you configure the sharing settings as shown in the SharePoint Sharing exhibit. (Click the SharePoint Sharing tab.)

Other users invite additional external users to shared files

External users accept invitations to access files

An anonymous access link is created or changed

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can share the files in Collection1 to user1@fabrikam.com.	<div></div>	<div></div>
You can share Collection1 to user2@fabrikam1.com.	<div></div>	<div></div>
You can share Collection1 to user3@us.contoso.com.	<div></div>	<div></div>

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Box 1: Yes  
In the first exhibit, "Allow invitations to be sent to any domain (most inclusive) is enabled". Also, everyone is allowed to 'invite'. The Target Domains setting will have no effect. This would only apply if one of the Allow/Deny invitations to the specified domain options were selected.  
There is a restriction that blocks invitations being sent to contoso.com. However, this restriction does not apply to Fabrikam.com. Therefore, you can share the files in Collection1 to user1@fabrikam.com.

Box 2: Yes  
As noted above, external sharing is enabled for any domain except contoso.com. The Target Domains setting in the first exhibit will have no effect. Therefore, you can share Collection1 to user2@fabrikam1.com.

Box 3: Yes  
As noted above, external sharing is enabled for any domain except contoso.com. Blocking sharing to contoso.com does not block sharing to us.contoso.com.

Passing Certification Exams Made Easy

visit - <https://www.surepassexam.com>

Therefore, you can share Collection1 to user3@us.contoso.com.  
Reference:  
<https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off>

**NEW QUESTION 199**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.  
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.  
Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

**PROVISION FROM ACTIVE DIRECTORY**

**Azure AD Connect cloud provisioning**

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

**Azure AD Connect sync**

Sync Status	Enabled
Last Sync	Less than 1 hour ago
Password Hash Sync	Enabled

**USER SIGN-IN**

<a href="#">Federation</a>	Disabled	0 domains
<a href="#">Seamless single sign-on</a>	Enabled	1 domain
<a href="#">Pass-through authentication</a>	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.  
Solution: From the Azure Active Directory admin center, you assign User2 the Security reader role. You instruct User2 to sign in as user2@contoso.com.  
Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

This is not a permissions issue so you do not need to assign the Security Reader role.  
The on-premises Active Directory domain is named contoso.com. User2 could sign on as user2@contoso.com but you would first need to change the UPN of User2 to user2@contoso.com.

**NEW QUESTION 202**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com.  
You purchase a DNS domain named fabnkam.com.  
You need to ensure that Microsoft Exchange Online users can receive emails sent to the fabrikam.com domain.  
What should you use?

- A. the Microsoft 365 admin center
- B. the Microsoft Endpoint Manager admin center
- C. the Microsoft 365 compliance center
- D. the Exchange admin center

**Answer:** A

**NEW QUESTION 206**

- (Exam Topic 5)

Your company has a hybrid deployment of Azure Active Directory (Azure AD). You purchase a Microsoft 365 subscription.  
Your company has a hybrid deployment of Azure Active Directory (Azure AD). You purchase a Microsoft 365 subscription.  
You plan to migrate the Home folder of each user to Microsoft 365 during several weeks. Each user has a device that runs Windows 10.  
You need to recommend a solution to migrate the Home folder of five administrative users as quickly as possible.  
Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. Each user has a device that runs Windows 10.  
You need to recommend a solution to migrate the Home folder of five administrative users as quickly as possible.  
Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

From SharePoint Online, create 10 libraries.

From Group Policy Management Editor, configure the OneDrive settings.

From Group Policy Management Editor, configure the Folder Redirection settings.

Instruct the users to run gpupdate.exe /force at a command prompt on each device.

Deploy the Azure File Sync agent to all devices.

Copy the OneDrive Administrative Templates to your computer.

Answer Area

>

<

↑

↓

- A. Mastered
- B. Not Mastered

Answer: A

**Explanation:**  
You need to configure a Group Policy Object (GPO) with the OneDrive settings required to redirect the Home folder of each user to Microsoft 365. Before you can configure the Group Policy, you need to download the OneDrive Administrative Templates. These templates add the required OneDrive settings to Group Policy so you can configure the settings as required.  
After the OneDrive settings have been configured in Group Policy, you can run the gpupdate /force command on the five computers to apply the new Group Policy settings immediately. Reference:  
<https://practical365.com/clients/onedrive/migrate-home-drives-to-onedrive-for-business/>

NEW QUESTION 211

- (Exam Topic 5)  
Your network contains an on-premises Active Directory domain named adatum.com that syncs to Azure Active Directory (Azure AD) by using the Azure AD Connect Express Settings. Password writeback is disabled.  
You create a user named User1 and enter Pass in the Password field as shown in the following exhibit.

The Azure AD password policy is configured as shown in the following exhibit.

Statements	Yes	No
User1 can sign in to Azure AD.	<input type="radio"/>	<input type="radio"/>
User1 can change the password immediately by using the My Apps portal.	<input type="radio"/>	<input type="radio"/>
From Azure AD, User1 must change the password every 90 days.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: Yes

The question states that User1 is synced to Azure AD. This tells us that the short password (Pass) meets the on-premise Active Directory password policy and you were able to create the on-premise account for User1. The on-premise Active Directory password policy applies over the Azure AD password policy for synced user accounts.

Box 2: No

Self-Service Password Reset would need to be configured. Box 3: Yes

The password for the Azure AD User1 account will expire after 90 days according to the Azure AD password policy. If the on-premise password policy has a shorter password expiration period, User1 would have the change his/her on-premise AD password. The new password would then sync to Azure AD.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-express>

**NEW QUESTION 216**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use Message center in the Microsoft 365 admin center.

Does this meet the goal?

- A. Yes
- B. NO

**Answer:** A

**Explanation:**

The Message center in the Microsoft 365 admin center is where you would go to view a list of the features that were recently updated in the tenant. This is where Microsoft posts official messages with information including new and changed features, planned maintenance, or other important announcements.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

**NEW QUESTION 221**

- (Exam Topic 4)

You need to recommend which API object the SharePoint Framework (SPFx) intranet components will use to access the research department's project management solution. What should you recommend?

- A. SPHttpClient
- B. AadHttpClient
- C. HSGraphClient
- D. HttpClient

**Answer:** B

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/sharepoint/dev/spfx/use-aadhttpclient>

**NEW QUESTION 226**

- (Exam Topic 4)

You need to recommend which type of Office Add-in must be used for SalesApp. What should you recommend?

- A. module extension
- B. task pane
- C. custom function
- D. contextual

**Answer:** B

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/office/dev/add-ins/word/word-add-ins-programming-overview>

**NEW QUESTION 230**

- (Exam Topic 3)

You need to configure just in time access to meet the technical requirements. What should you use?

- A. access reviews
- B. entitlement management
- C. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- D. Azure Active Directory (Azure AD) Identity Protection

**Answer: C**

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure> joergsi 5 months, 1 week ago

Privileged access management

The effectiveness of an information protection strategy depends on how secure the administrative accounts used to manage that strategy are. If accounts that can be used to configure and manage an information protection strategy are not properly secured, then the information protection strategy itself can be easily compromised.

Privileged access management enables you to configure policies that apply

=> just-in-time administrative principles to sensitive administrative roles.

For example, if someone needs temporary access to configure an information protection policy, that person would need to go through an approval process to obtain the necessary set of rights instead of having an Azure Active Directory (Azure AD) account with those rights permanently assigned.

Thomas, Orin. Exam Ref MS-100 Microsoft 365 Identity and Services (S.10). Pearson Education. Kindle-Version.

**NEW QUESTION 234**

- (Exam Topic 3)

You are evaluating the use of multi-factor authentication (MFA).

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Users will have 14 days to register for MFA after they sign in for the first time.	<input type="radio"/>	<input type="radio"/>
Users must use the Microsoft Authenticator app to complete MFA.	<input type="radio"/>	<input type="radio"/>
After registering, users must use MFA for every sign-in.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer: A**

**NEW QUESTION 238**

- (Exam Topic 2)

You are evaluating the required processes for Project1.

You need to recommend which DNS record must be created before you begin the project.

Which DNS record should you recommend?

- A. mail exchanger (MX)
- B. alias (CNAME)
- C. host (A)
- D. host (AAA)

**Answer: A**

**NEW QUESTION 242**

- (Exam Topic 2)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use Monitoring and reports from the Compliance admin center. Does

this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

Depending on what your organization's Office 365 subscription includes, the Dashboard in Security & Compliance includes several widgets, such as Threat Management Summary, Threat Protection Status, Global Weekly Threat Detections, Malware, etc. The Compliance admin center in Microsoft 365 contains much of the same information but also includes additional entries focusing on alerts, data insights.

The Monitoring and reports section from the Compliance admin center does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

**NEW QUESTION 245**

- (Exam Topic 2)

Which migration solution should you recommend for Project1?

- A. From the Microsoft 365 admin center, start a data migration and click Exchange as the data service.
- B. From the Exchange admin center, start a migration and select Cutover migration.
- C. From the Exchange admin center, start a migration and select Staged migration.
- D. From the Microsoft 365 admin center, start a data migration and click Upload PST as the data service.

**Answer:** A

**Explanation:**

Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365. Fabrikam does NOT plan to implement identity federation.

All users must be able to exchange email messages successfully during Project1 by using their current email address.

During Project1, some users will have mailboxes in Microsoft 365 and some users will have mailboxes in Exchange on-premises. To enable users to be able to exchange email messages successfully during Project1 by using their current email address, we'll need to configure hybrid Exchange.

A new way to migrate mailboxes in a hybrid Exchange configuration is to use the Microsoft 365 data migration service. The data migration service can migrate Exchange, SharePoint and OneDrive. Therefore, we need to start a data migration and click Exchange as the service to be migrated.

Reference:

<https://docs.microsoft.com/en-us/fasttrack/O365-data-migration> <https://docs.microsoft.com/en-us/exchange/hybrid-deployment/move-mailboxes>

**NEW QUESTION 248**

- (Exam Topic 2)

You need to prepare the environment for Project1. You create the Microsoft 365 tenant.

Which three actions should you perform in sequence next? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Configure the required DNS records and verify fabrikam.com as a custom domain.

Implement directory synchronization.

Create a Microsoft Azure Active Directory (Azure AD) tenant.

Modify the Exchange ActiveSync Access Settings.

Run the Hybrid Configuration wizard.

**Answer Area**

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Fabrikam plans to implement a Microsoft 365 Enterprise subscription and move all email and shared documents to the subscription.

All users must be able to exchange email messages successfully during Project1 by using their current email address.

After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

This configuration requires a hybrid Exchange configuration during the pilot phase. This means that you will have mailboxes hosted in Exchange Online and mailboxes hosted in Exchange on-premise.

The first steps to configure Exchange hybrid are to Create the Azure AD tenant, add the Fabrikam.com domain as a custom domain, then configure directory synchronization to replicate the on-prem Active Directory user accounts to Azure Active Directory.

Reference:

<https://docs.microsoft.com/en-us/exchange/exchange-hybrid>

**NEW QUESTION 251**

- (Exam Topic 2)

You need to ensure that all the sales department users can authenticate successfully during Project1 and Project2. Which authentication strategy should you implement for the pilot projects?

- A. password hash synchronization and seamless SSO
- B. pass-through authentication
- C. password hash synchronization
- D. pass-through authentication and seamless SSO

**Answer:** A

**Explanation:**

- Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.
- Project2: After the successful completion of Project1, Microsoft Teams & Skype for Business will be enabled in Microsoft 365 for the sales department users.
- After the planned migration to Microsoft 365, all users must be signed in to on-premises and cloud-based applications automatically.
- Fabrikam does NOT plan to implement identity federation.
- After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable password hash synchronization to enable the users to continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable SSO to enable all users to be signed in to on-premises and cloud-based applications automatically.

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

**NEW QUESTION 253**

- (Exam Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role. From the Exchange admin center, you assign User2 the Compliance Management role.

Does this meet the goal?

- A. Yes
- B. NO

**Answer:** A

**Explanation:**

- User2 must be able to view reports and schedule the email delivery of security and compliance reports. The Security Reader role can view reports.

The Compliance Management role can schedule the email delivery of security and compliance reports. Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

**NEW QUESTION 254**

- (Exam Topic 1)

You need to meet the security requirement for the vendors. What should you do?

- A. From the Azure portal, modify the authentication methods.
- B. From Azure Cloud Shell, run the New-AzureADMSInvitation and specify the –InvitedUserEmailAddress cmdlet.
- C. From Azure Cloud Shell, run the Set-MsolUserPrincipalName and specify the –tenantID parameter.
- D. From the Azure portal, add an identity provider.

**Answer:** B

**Explanation:**

- Vendors must be able to authenticate by using their Microsoft account when accessing Contoso resources.

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the vendors already have Microsoft accounts so they can authenticate using them.

In this solution, we are creating guest account invitations by using the New-AzureADMSInvitation cmdlet and specifying the –InvitedUserEmailAddress parameter.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator> <https://docs.microsoft.com/en-us/powershell/module/azuread/new-azureadmsinvitation?view=azureadps-2.0>

**NEW QUESTION 256**

- (Exam Topic 1)

You need to assign User2 the required roles to meet the security requirements and the technical requirements. To which two roles should you assign User2? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. the Exchange View-only Organization Management role
- B. the Microsoft 365 Records Management role
- C. the Exchange Online Help Desk role
- D. the Microsoft 365 Security Reader role

E. the Exchange Online Compliance Management role

**Answer:** DE

**Explanation:**

➤ User2 must be able to view reports and schedule the email delivery of security and compliance reports. The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.

The Exchange Online Compliance Management role can schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

**NEW QUESTION 257**

- (Exam Topic 1)

You need to meet the technical requirements for the user licenses.

Which two properties should you configure for each user? To answer, select the appropriate properties in the answer area.

NOTE: Each correct selection is worth one point.

Identity

Name	First Name	Last Name
<input type="text" value="User1"/>	<input type="text"/>	<input type="text"/>
User name	User type	
<input type="text" value="User1@Contoso1410.onmicrosoft.com"/>	<b>Member</b>	
Object ID	Source	
<input type="text" value="22c31139-c143-4076-a71c-b5d0d5..."/> 	Azure Active Directory	

Job info

Job title	Department	Manager	<a href="#">Remove</a> <a href="#">Change</a>
<input type="text"/>	<input type="text"/>	<input type="text"/>	

Settings

Block sign in	Usage location
<input type="button" value="Yes"/> <input checked="" type="button" value="No"/>	<input type="text" value=""/>

Contact info

Street address	State or province	Country or region
<input type="text"/>	<input type="text"/>	<input type="text"/>
City	ZIP or postal code	Office phone
<input type="text"/>	<input type="text"/>	<input type="text"/>

Authentication contact info

Phone	Email
<input type="text"/>	<input type="text"/>
Alternate phone	Alternate email
<input type="text"/>	<input type="text"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

All new users must be assigned Office 365 licenses automatically.

To enable Microsoft 365 license assignment, the users must have a username. This is also the UPN. The users must also have a Usage Location.

**NEW QUESTION 262**

- (Exam Topic 1)

You need to meet the security requirement for Group1. What should you do?

- A. Configure all users to sign in by using multi-factor authentication.
- B. Modify the properties of Group1.
- C. Assign Group1 a management role.
- D. Modify the Password reset properties of the Azure AD tenant.

**Answer:** D

**Explanation:**

References:

➤ The members of Group1 must be required to answer a security question before changing their password.

If SSPR (Self Service Password Reset) is enabled, you must select at least one of the following options for the authentication methods. Sometimes you hear these options referred to as "gates."

Mobile app notification Mobile app code

Email

Mobile phone Office phone Security questions

You can specify the required authentication methods in the Password reset properties of the Azure AD tenant. In this case, you should set the required authentication method to be 'Security questions'.
