Exam Questions MS-203

Microsoft 365 Messaging
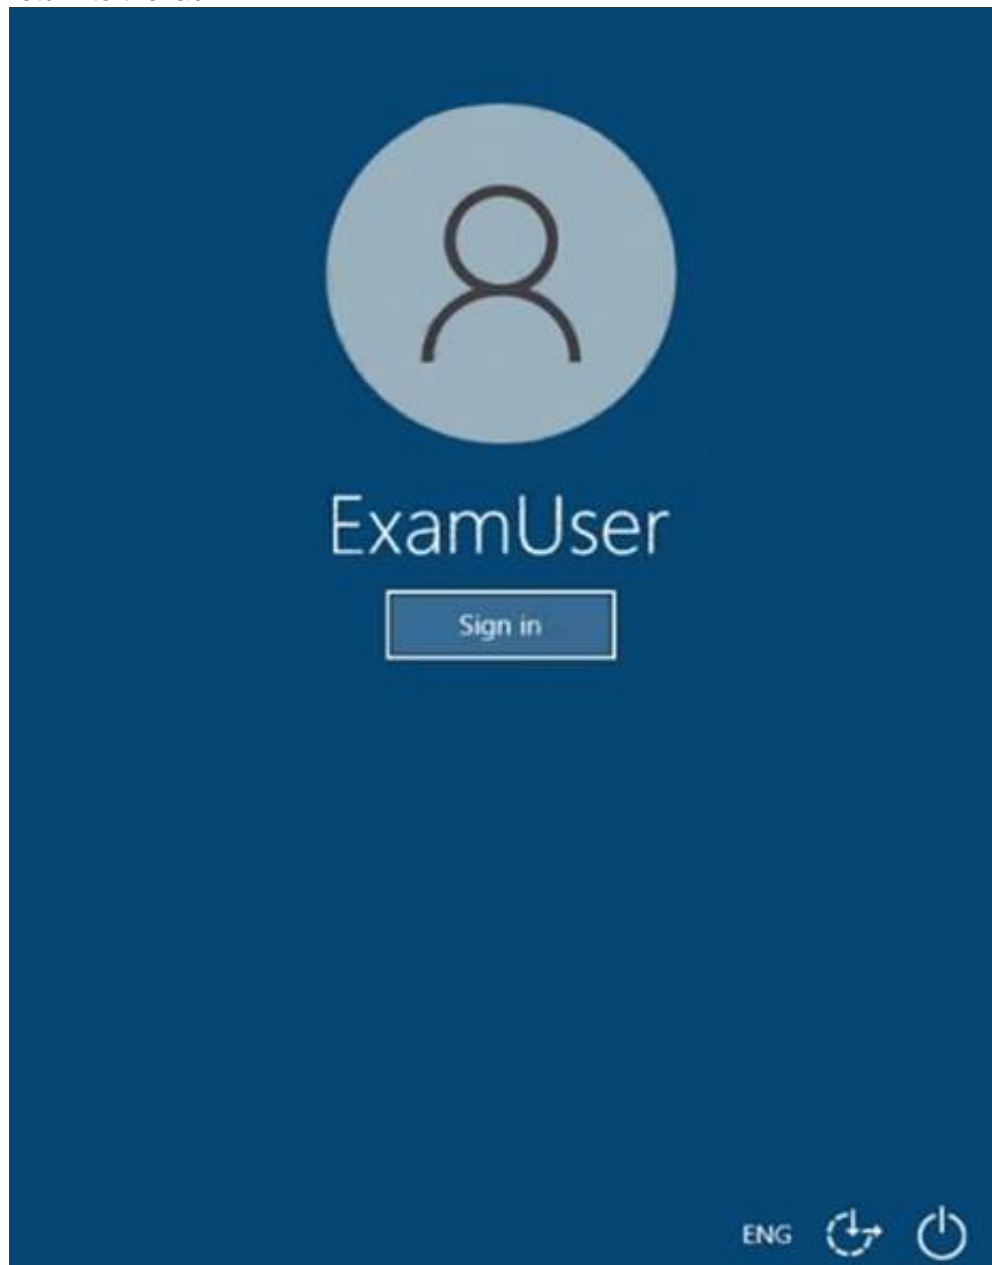

NEW QUESTION 1
- (Exam Topic 5)
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

NEW QUESTION 2
- (Exam Topic 5)
You have a Microsoft Exchange Online tenant that contains three Azure Active Directory (Azure AD) security groups named Administrators, Managers, and Marketing. The tenant contains the users shown in the following table.

Name	Group membership
User1	Managers
User2	Marketing
User3	Administrators
User4	None

The tenant contains the resources shown in the following table.

Name	Type
ConferenceRoom1	Room
ConferenceRoom2	Room
Projector1	Equipment

ConferenceRoom1 has he following policy.

```
PS C:\> get-calendarprocessing "ConferenceRoom1"|fl Allb*,allr*,bookinp*,req*,res*
AllBookInPolicy         : False
AllRequestOutOfPolicy   : False
AllRequestInPolicy      : False
BookInPolicy            : {/o=ExchangeLabs/ou=Exchange Administrative Group
                          (FYDIBOHF23SPDLT)/cn=Recipients/cn=7fddfdd211974ea68d22dae2c891db02-Managers}

ResourceDelegates       : {User4}
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can book ConferenceRoom1 automatically without the approval of User4.	○	○
User2 can book ConferenceRoom1 automatically without the approval of User4.	○	○
User4 can book ConferenceRoom1 pending approval from User3.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
The BookInPolicy allows the Managers group. User1 is in the Managers group so User 1 can book ConferenceRoom1 automatically without the approval of User4.
Box 2: No
The BookInPolicy allows the Managers group. User2 is not in the Managers group so User 2 cannot book ConferenceRoom1 automatically without the approval of User4.
Box 3: No
The RequestInPolicy does not include User4. Therefore, User3 is not allowed to request to book the meeting room either with or without approval.

NEW QUESTION 6
- (Exam Topic 5)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft Exchange Online tenant that uses an email domain named contoso.com. You need to prevent all users from performing the following tasks:

≫ Sending out-of-office replies to an email domain named fabrikam.com.

≫ Sending automatic replies to an email domain named adatum.com.
The solution must ensure that all the users can send out-of-office replies and automatic replies to other email domains on the internet.
Solution: You create one mail flow rule. Does this meet the goal?

A. Yes
B. No

Answer: B

NOTE: Each correct selection is worth one point.

What should you do to ensure that all mailboxes can be synced successfully?

- Enable the MRS proxy endpoint on all servers.
- Disable the MRS proxy endpoint on all servers.
- Update the external URL to outlook.office365.com.

What should you do to ensure that email can be delivered between on-premises users and Microsoft Exchange Online users?

- Configure IMAP to use a self-signed certificate.
- Configure SMTP to use a third-party certificate.
- Disable the MRS proxy endpoint on all servers.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1:
The MRS proxy endpoint needs to be enabled on all mailbox servers.
Box 2:
SMTP is used to deliver email between on-premise users and Exchange Online users. This requires a third-party (public CA) certificate.

You have a Microsoft Exchange Server 2019 hybrid deployment. All user mailboxes are hosted in Microsoft 365. All outbound SMTP email is routed through the on-premises Exchange organization.
A corporate security policy requires that you must prevent credit card numbers from being sent to internet recipients by using email.
You need to configure the deployment to meet the security policy requirement.
Solution: From the Exchange organization, you modify the properties of the Send connectors. Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
You should create a Data Loss Prevention (DLP) policy.

NEW QUESTION 21
- (Exam Topic 5)

You have a Microsoft Exchange Server 2019 hybrid deployment. All user mailboxes are migrated to Exchange Online.
You need to migrate the public folders from the on-premises organizations to Exchange Online.
Which three actions should you perform in sequence before you create the migration batch? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
From Exchange Online, create the target public folder mailboxes.	
From Exchange Online, run the `Set-organizationConfig -RemotePublicFoldermailboxes $Null -PublicFoldersEnabled Loval` command	
From Exchange on-premises, run the `SetmailPublicFolderExternalAddress.ps1` script	
From Exchange on-premises, run the `Export-ModernPublicFolderStatistics.ps1` script	
From Exchange on-premises, run the `Set-OrganizationConfig -RemotePublicFolderMailboxes $Null -PublicFoldersEnabled Local` command

Another administrator at contoso.com plans to deploy an SMTP smart host that uses an IP address of 131.107.2.200.
You need to prepare a solution to route all emails sent to users in the @contoso.com domain from your organization by using the SMTP host. The solution must have a status set to Off until the administrator deploys the smart host.
To complete this task, sign in to the Exchange admin center.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
≫ In the EAC, navigate to Mail flow
>Send connectors, and then click Add +. This starts the New Send connector
wizard.
≫ On the first page, enter the following information:
- Name: Enter a descriptive name for the Send connector, for example, Smart host to Internet.
- Type: Select a descriptive value. For example, Internet
oCr ustom.
When you're finished, click Next.
≫ On the next page, select Route mail through smart hosts, and then click Add +. In the Add smart
host
dialog box that appears, identify the smart host by using one of the following values:

- IP address: For example, 192.168.3.2.
- Fully qualified domain name (FQDN): For example, securitydevice01.contoso.com. Note that the Exchange source servers for the Send connector must be able to resolve the smart host in DNS by using this FQDN.
When you're finished, click Save.

≫ You can enter multiple smart hosts by repeating Step 3. When you're finished, click Next.

≫ On the next page, in the Route mail through smart hosts
that's required by the smart host. Valid values are:
section, select the authentication method
Table Description automatically generated

TABLE 1

Authentication mechanism	Description
None	No authentication. For example, when access to the smart host is restricted by the source IP address.
Basic authentication	Basic authentication. Requires a username and password. The username and password are sent in clear text.
Offer basic authentication only after starting TLS	Basic authentication that's encrypted with TLS. This requires a server certificate on the smart host that contains the exact FQDN of the smart host that's defined on the Send connector.
Exchange Server authentication	Generic Security Services application programming interface (GSSAPI) and Mutual GSSAPI authentication.
Externally secured	The connection is presumed to be secured by using a security mechanism that's external to Exchange. The connection may be an Internet Protocol security (IPsec) association or a virtual private network (VPN). Alternatively, the servers may reside in a trusted, physically controlled network.

≫ When you're finished, click Next.

≫ On the next page, in the Address space
appears, enter the following information:
section, clickAdd +. In the Add domain
dialog box that
- Type: Verify SMTP is entered.
- Fully Qualified Domain Name (FQDN): Enter an asterisk (*) to indicate the Send connector applies to messages addressed to all external domains. Alternatively, you can enter a specific external domain (for example, contoso.com), or a domain and all subdomains (for example, *.contoso.com).
- Cost: Verify 1 is entered. A lower value indicates a more preferred route for the domains you specified. When you're finished, click Save.

≫ Back on the previous page, the Scoped send connector
setting is important if your organization has
Exchange servers installed in multiple Active Directory sites:
- If you don't select Scoped send connector, the connector is usable by all transport servers (Exchange 2013 or later Mailbox servers and Exchange 2010 Hub Transport servers) in the entire Active Directory forest. This is the default value.
- If you select Scoped send connector, the connector is only usable by other transport servers in the same Active Directory site.
When you're finished, click Next.

≫ On the next page, in the Source server
section, clickAdd +. In the Select a Server
dialog box that
appears, select one or more Mailbox servers that you want to use to send outbound mail to the smart host. If you have multiple Mailbox servers in your environment, select the ones that can route mail to the smart host. If you have only one Mailbox server, select that one. After you've selected at least one Mailbox server, click Add, click OK, and then click Finish.
After you create the Send connector, it appears in the Send connector list. From the Send connector list, you can turn the connector on or off. Reference:

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has an Exchange Online tenant that contains 2,000 mailboxes.
A partner company named Fabrikam, Inc. uses a third-party messaging solution. The outbound SMTP server for Fabrikam uses an IP address of 131.107.2.22.
You discover that several email messages from the fabrikam.com domain are erroneously marked as spam. You need to ensure that all the email messages sent from the fabrikam.com domain are delivered successfully
to the user mailboxes of your company.
Solution: You create a spam filter policy. Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
Add Fabrikam.com to the 'Domain allow list' in a spam filter policy.

NEW QUESTION 39
- (Exam Topic 5)
You have a Microsoft Exchange Server 2019 organization that uses an email domain named contoso.com. You plan to move several mailboxes to Microsoft 365.
You need to configure hybrid mail flow to meet the following requirements:

≫ All email messages received from the internet must be filtered for spam by Microsoft 365.

≫ Your company's on-premises firewall must allow email messages between the on-premises Exchange servers and Microsoft 365.
What should you configure? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Mail exchanger (MX) record to configure:

NEW QUESTION 147
- (Exam Topic 5)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft 365 E5 subscription.
You need to ensure that a user named User1 can review audit reports from the Microsoft 365 security center. User1 must be prevented from tracing messages from the Security admin center.
Solution: You assign the Security Reader role to User1. Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
Security Administrator can view the audit reports but cannot create a message trace. Reference:

NEW QUESTION 152
- (Exam Topic 5)
You have a Microsoft Exchange Server 2019 hybrid deployment. You use Advanced Threat Protection (ATP).
You have safe attachments policies configured as shown in the following table.

Name	Action	Action On Error	Enable redirect
Policy1	Dynamic Delivery	Enabled	Enabled
Policy2	Block	Enabled	Disabled

You have the users shown in the following table.

Name	Location	Safe attachments policy
User1	On-premises	Policy1
User2	Exchange Online	Policy2
User3	Exchange Online	None
User4	Exchange Online	Policy1

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
If User1 receives an email message that contains an attachment, the message will be delivered immediately with a placeholder file. The attachment will be reattached if no malware is detected.	○	○
If User2 receives an email message that has detected malware, the message will be placed in quarantine.	○	○
If User4 receives an email message that contains an attachment, and then forwards the message to User3 before attachment scanning is complete, User3 will receive the attachment after the initial attachment scanning is complete.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: No
Dynamic Delivery cannot make changes to on-premise mailboxes after the message has been delivered. Box 2: Yes
Policy2 applies to User2. Policy2 has a block action so the message will be placed in quarantine. Box 3: No
User3 does not have a policy assigned so the attachment will be forwarded without being scanned. Reference:

NEW QUESTION 153
- (Exam Topic 5)
You have a hybrid deployment between a Microsoft Exchange Online tenant and on-premises Exchange Server 2019 organization. The on-premises organization contains several Exchange Server 2019 servers.
You discover that delivery fails for all email messages sent from the on-premises organization to Microsoft 365.
You discover that the certificate for an on-premises Exchange server expired.
You need to resolve the issue as quickly possible. The solution must minimize administrative effort. What should you do on the on-premises Exchange server?

A. Create a new self-signed certificate.
B. Generate a certificate renewal request.
C. Generate a certificate request.
D. Add the certificate for a new root certification authority (CA).

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has a Microsoft Exchange Server 2019 hybrid deployment that contains two Mailbox servers named MBX1 and MBX2.
The company has the departments shown in the following table.

Name	Mailbox location	Number of recipients
Sales	MBX1	300
Production	MBX2	500
Administration	MBX1	200
IT	Exchange Online	50
Managers	Exchange Online	100
Marketing	Exchange Online	350

From the on-premises organization, outbound email is sent directly to the Internet by using DNS lookups. You are informed that some sales department users send email messages that are identified as spam.
You need to automatically block the sales department users from repeatedly sending spam. Solution: You run the Install-AntispamAgents.psl PowerShell script on the MBX1 Mailbox server. Does this meet the goal?

A. yes
B. No

From the on-premises organization, outbound email is sent directly to the Internet by using DNS lookups. You are informed that some sales department users send email messages that are identified as spam.
You need to automatically block the sales department users from repeatedly sending spam. Solution: You modify the outbound spam filter policy in Exchange Online.
Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
From the on-premises organization, outbound email is sent directly to the Internet by using DNS lookups. Therefore, the Exchange Online outbound spam filter will not scan the emails sent from the on-premises mailboxes.

You create a policy to track an activity or in some cases a few related activities, such a sharing a file with an external user by sharing it, assigning access permissions, or creating an anonymous link. When a user performs the activity defined by the policy, an alert is triggered based on the alert threshold settings.

- Activity conditions. For most activities, you can define additional conditions that must be met to trigger an alert. Common conditions include IP addresses (so that an alert is triggered when the user performs the activity on a computer with a specific IP address or within an IP address range), whether an alert is triggered if a specific user or users perform that activity, and whether the activity is performed on a specific file name or URL. You can also configure a condition that triggers an alert when the activity is performed by any user in your organization. The available conditions are dependent on the selected activity.

≫ You can also define user tags as a condition of an alert policy. This results in the alerts triggered by the policy to include the context of the impacted user. You can use system user tags or custom user tags.

- When the alert is triggered. You can configure a setting that defines how often an activity can occur before an alert is triggered. This allows you to set up a policy to generate an alert every time an activity matches the policy conditions, when a certain threshold is exceeded, or when the occurrence of the activity the alert is tracking becomes unusual for your organization.

≫ If you select the setting based on unusual activity, Microsoft establishes a baseline value that defines the normal frequency for the selected activity. It takes up to seven days to establish this baseline, during which alerts won't be generated. After the baseline is established, an alert is triggered when the frequency of the

activity tracked by the alert policy greatly exceeds the baseline value. For
auditing-related activities (such as file and folder activities), you can establish a baseline based on a single user or based on all users in your organization; for malware-related activities, you can establish a baseline based on a single malware family, a single recipient, or all messages in your organization.
- Alert category. To help with tracking and managing the alerts generated by a policy, you can assign one of the following categories to a policy.
- Data loss prevention
- Information governance
- Mail flow
- Permissions
- Threat management
- Others

> When an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the category defined in this setting. This allows you to track and manage alerts that have the
same category setting on the Alerts
based on category.
page in the compliance center because you can sort and filter alerts
- Alert severity. Similar to the alert category, you assign a severity attribute (Low, Medium, High, or Informational) to alert policies. Like the alert category, when an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the same severity level that's set for the alert policy. Again, this allows you to track and manage alerts that have the same severity setting on the Alerts
page. For
example, you can filter the list of alerts so that only alerts with a High
severity are displayed.
- Email notifications. You can set up the policy so that email notifications are sent (or not sent) to a list of users when an alert is triggered. You can also set a daily notification limit so that once the maximum number of notifications has been reached, no more notifications are sent for the alert during that day. In addition to email notifications, you or other administrators can view the alerts that are triggered by a policy on the Alerts
page. Consider enabling email notifications for alert policies of a specific category or that have a higher severity setting.

You need to reduce the likelihood that malicious links contained in emails received by mailboxes in @lab.CloudCredential(1).TenantName are opened.

To complete this task, sign in to the Exchange admin center.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

≫ Navigate to the Exchange Admin Center, and then choose the Advanced Threats
section of the EAC.

≫ Click the Safe Links
tab to examine all existing Safe Links policies:

≫ After navigating to the Safe Links policy page, choose the Add
button (+) to create a new policy. The
New Safe Links Policy
window opens.
- In the resulting window we'll be presented with the options available for creating our new Safe Links policy.

≫ In Name
enter an appropriate, unique, name that describes this policy. In the description enter some text
that provides a little more detail for anyone trying to make sense of the options selected here.

≫ Next we'll choose the action to take for URLs. We can leave this Off, if for example we are creating a policy to exclude a group of users that would otherwise
be affected by another Safe Links policy.

≫ The checkbox Do not track user click
can be selected if you do not wish to use the reporting
functionality available at a later date. This is a key feature when understanding which users clicked a link that was later found to be a threat, so be careful about
choosing to disable user click tracking.

≫ Our final check box provides options for click-through is a link is found to be dangerous. In some circumstances you may trust users to click-through links, or
they may request the ability to do so. In
most circumstances you will not
want a user to click-through the malicious link.

≫ Some URLs, such as those for internal addresses or even trusted partners, may not require re-writing.
Enter these URLs here.

≫ Finally, we will select the scope for the rule under the Applied to

section.

≫ Using similar conditions to transport rules we can select who this rule applies to including:
- Individual recipients
- Recipient domains
- Members of distribution groups

≫ The same conditions can be used for exceptions. When you have configured your rule, choose Save.
After saving the new Safe Links rule it will be shown in the EAC list. Just like Transport Rules, you can use the Enabled column to enable or disable the Safe Links policy.

NEW QUESTION 280
- (Exam Topic 5)
You have a Microsoft Exchange Server 2019 hybrid deployment. You have the on-premises mailboxes shown in the following table.

Name	Forwarding address
User1	User6
User2	None
User3	None
User4	None
User5	None
User6	None

You add the mailbox permissions shown in the following table.

Mailbox	Permission
User2	Send As for User4
User4	Full Access for User3
User6	Send on Behalf for User5

You plan to migrate the mailboxes to Exchange Online by using remote mailbox move requests. The mailboxes will be migrated according to the schedule shown in the following table.

Week	Mailbox
1	User1, User2, User3, User6
2	User4, User5

Mailboxes migrated the same week will have their mailbox move requests included in the same batch and will be cut over simultaneously.
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
The mail forwarding settings of the User1 mailbox will be preserved automatically after the migration.	○	○
