NEW QUESTION 1

What is the primary purpose of Umbrella??s Secure Web Gateway?

- A. exposes shadow IT by providing the ability to detect and report on cloud applications across organizations
- B. analyzes sensitive data in-line to provide visibility and control over sensitive data
- C. isolates web traffic from the user device to prevent the possibility of malware infections
- D. logs and inspects web traffic for full visibility, URL and application controls, and protection against malware

Answer: D

Explanation:

The primary purpose of Umbrella??s Secure Web Gateway (SWG) is to provide a comprehensive security solution that logs and inspects web traffic. This allows for full visibility into the web activities within an organization, enabling URL and application controls, and offering advanced threat protection against malware. SWG acts as a checkpoint between users and the internet, filtering and monitoring web traffic to ensure safe internet access while blocking potentially harmful content. It is designed to enforce security policies, prevent data leakage, and protect against web-based threats by inspecting URLs, detecting threats, and decrypting select encrypted traffic for inspection.

NEW QUESTION 7

Which strategy allows an organization to experience 53% fewer cyberattacks and breaches?

- A. multi-vendor security strategy
- B. cloud-based security strategy
- C. proactive security strategy
- D. decentralized security strategy

Answer: C

Explanation:

Explanation

A proactive security strategy is essential for reducing the number of cyberattacks and breaches an organization experiences. This approach involves anticipating potential security threats and implementing measures to prevent them before they occur. According to research conducted by The Economist Intelligence Unit, organizations that adopt a proactive security strategy, supported by a fully engaged C-suite and board of directors, experience 53% fewer cyberattacks and breaches compared to those that do not. This strategy includes active monitoring of external threats and mobilizing the entire workforce to defend against attacks, combining the latest security technology with new business processes.

NEW QUESTION 8

The average number of SaaS application categories used by an SMB is 13. What does this mean for business?

- A. more security vulnerabilities
- B. less data with more contextualization
- C. less system interactions
- D. less distributed applications

Answer: A

Explanation:

Explanation

The average use of 13 SaaS application categories by an SMB indicates a diverse range of software tools utilized in the business operations. This diversity can lead to more security vulnerabilities for several reasons:

- * 1. Increased Attack Surface: Each SaaS application represents a potential entry point for security threats, so more applications mean a larger attack surface.
- * 2. Complexity in Management: Managing security across multiple applications can be complex, increasing the chance of oversight or errors.
- * 3. Integration Challenges: Integrating different SaaS applications can create security gaps, especially if they are not designed to work together seamlessly.
- * 4. Varied Security Standards: Different SaaS providers may have different levels of security measures, and weaker security in one application can compromise the overall security posture.

Businesses must therefore be vigilant in implementing comprehensive security strategies that encompass all the SaaS applications they use.
