NEW QUESTION 8

Your organization has a Microsoft 365 subscription. All users are assigned a Microsoft 365 Copilot license. You need to prevent the users from generating images by using Copilot. What should you use?

- A. the Microsoft Defender portal
- B. the Microsoft Purview portal
- C. the Microsoft 365 admin center
- D. the Microsoft Entra admin center

Answer: C

Explanation:

The correct answer is C. the Microsoft 365 admin center. Microsoft Learn documents a specific Copilot image generation setting in the Microsoft 365 admin center under Copilot > Settings > Copilot actions > Copilot image generation. Microsoft states that when this scenario is allowed, users can ask Copilot to create, design, and edit images. When it is not allowed, Copilot does not generate images and instead responds with stock or brand images. This directly matches the requirement to prevent users from generating images by using Copilot.

The other options are incorrect because Microsoft does not document this control as being managed from Defender, Purview, or Entra for this scenario. Microsoft also separately notes that organizations can control access to Designer image generation through policy, but the admin experience for managing the Microsoft 365 Copilot scenario itself is explicitly surfaced in the Microsoft 365 admin center. Therefore, for an exam question focused on where an admin should go to disable image generation in Copilot, the best and documented answer is the Microsoft 365 admin center.

NEW QUESTION 9

What can you use to block a user account automatically when a risky sign-in is detected?

- A. Microsoft Entra ID Protection
- B. Microsoft Defender for Office 365
- C. Microsoft Entra Privileged Identity Management (PIM)

NEW QUESTION 10

Your company is evaluating Microsoft 365 Copilot pay-as-you-go billing instead of purchasing a Microsoft 365 Copilot license. In which scenario can pay-as-you-go billing apply?

- A. generating a recap of a Microsoft Teams meeting
- B. using a custom agent that is grounded in work data
- C. performing multi-step reasoning by using the Researcher agent
- D. using the AI assistant to edit a document in Copilot in Word

Answer: B

NEW QUESTION 11

Your organization has a Microsoft 365 subscription. All users have Microsoft 365 Copilot licenses.

You need to identify where sensitive content is being used during Copilot interactions, analyze the content usage patterns, and provide recommendations on applying the appropriate protections.

What should you use?

- A. Microsoft Viva Insights
- B. the Microsoft Purview DSPM for AI solution
- C. Microsoft Security Copilot
- D. the Microsoft Purview Insider Risk Management solution

Answer: B

NEW QUESTION 12

Your organization has a Microsoft 365 subscription.

Which two tasks can you perform by using the Exchange admin center? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a mail flow rule.
- B. Add a custom domain.
- C. Assign a Microsoft Exchange license.
- D. Create a shared mailbox.

Answer: AD

NEW QUESTION 16

Your organization has a Microsoft 365 subscription. All users are assigned Microsoft 365 Copilot licenses.

Some users report receiving Copilot responses that contain information from a Microsoft SharePoint site named Finance. The users report that the information is commercially sensitive.

You need to prevent Copilot from providing responses that contain information from the Finance site.

What should you do?

- A. From Microsoft Purview, create an Information Barrier (IB) policy.
- B. From Microsoft Defender, create a data connector.
- C. From Microsoft Entra, create a Conditional Access policy.
- D. From the Finance site, configure permissions.

Answer: D

NEW QUESTION 18

Your company has a written compliance policy that requires all emails be retained for seven years, and then permanently deleted. Which Microsoft Purview solution should you use?

- A. Information Protection
- B. Insider Risk Management
- C. Data Loss Prevention
- D. Data Lifecycle Management

Answer: D

Explanation:

The correct answer is D. Data Lifecycle Management. Microsoft Learn states that Microsoft Purview retention policies and retention labels, managed under Data Lifecycle Management, support three core outcomes: retain-only, delete-only, and retain and then delete. The requirement in this question is exact: keep email for seven years and then permanently delete it. That is a textbook retain and then delete retention configuration, which Microsoft documents as part of Purview's retention capabilities. Microsoft also recommends using Microsoft 365 retention policies and labels for retaining and deleting emails rather than relying on older Exchange-only approaches in most modern compliance scenarios.

The other options do not meet the requirement. Information Protection focuses on labeling and protecting sensitive information. Insider Risk Management is used to detect and investigate risky user behavior. Data Loss Prevention helps prevent inappropriate sharing or exfiltration of sensitive data. None of those are designed to enforce a timed seven-year retention period followed by automatic permanent deletion. The Microsoft Purview solution explicitly built for that lifecycle requirement is Data Lifecycle Management.

NEW QUESTION 28

Your organization has a Microsoft 365 E5 subscription. You create a Microsoft Purview sensitivity label named Label1. You need to ensure that users can apply Label1 to files in Microsoft 365. What should you use?

- A. an auto-labeling policy
- B. a trainable classifier
- C. a retention label policy
- D. a sensitivity label policy

Answer: D

Explanation:

The correct answer is D. a sensitivity label policy. In Microsoft Purview, creating a sensitivity label by itself does not make it available to users. Microsoft Learn states that after you create sensitivity labels, you must publish them by creating a label policy so that users and groups can see and apply those labels in Microsoft 365 apps and services. Publishing controls which labels are available and to whom they are shown. This is why a sensitivity label policy is required to ensure that users can apply Label1 to files.

The other options do not meet the requirement. Auto-labeling policies apply labels automatically when content matches conditions, but they are not the primary mechanism for simply making a label available for user selection. A trainable classifier is used to identify content categories, not to publish a label. A retention label policy publishes retention labels for records and lifecycle purposes, which is different from sensitivity labeling for classification and protection. Therefore, the correct Microsoft-documented method to let users apply Label1 to files is to publish it using a sensitivity label policy.

NEW QUESTION 33

Your organization has a Microsoft 365 subscription that contains a user named User1. User1 plans to leave your company in two weeks. You need to capture the activity of User1 to identify whether the user is exfiltrating data. Which Microsoft Purview solution should you use?

Answer Area

John can [answer choice].

View all the users in the Microsoft Entra tenant

view all the content in Microsoft SharePoint sites

read all the content in Microsoft Exchange mailboxes

perform eDiscovery of Microsoft 365 Copilot prompts

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The correct answer is View all the users in the Microsoft Entra tenant. In the exhibit, John is assigned the Global Reader role. Microsoft documents that the Global Reader role is intended for users who need to view administrator features and settings in admin centers that a Global Administrator can view, but without edit permissions. That makes it appropriate for read-only visibility into tenant-wide directory and admin information, including users in Microsoft Entra. The other answer choices are not supported by the Global Reader role. Microsoft distinguishes admin-center visibility from access to content in workloads such as SharePoint sites and Exchange mailboxes. Global Reader is a read-only administrative role, not a content access role for reading all documents or mailbox items. Likewise, performing eDiscovery of Microsoft 365 Copilot prompts requires Purview eDiscovery permissions or role group membership, not merely the Global Reader role. Microsoft documents eDiscovery permissions separately in Purview role groups. Therefore, based on the assigned role shown, the valid completion is that John can view all the users in the Microsoft Entra tenant.
