**NEW QUESTION 3**

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

- A. the Scrum Assistant template

- B. the Customer Insights Assistant template
- C. the code interpreter capability
- D. the image generator capability

**Answer: C**

**Explanation:**

The correct answer is C. the code interpreter capability. Microsoft Learn states that the code interpreter capability for Microsoft 365 Copilot declarative agents allows the agent to generate and execute Python code to analyze data and generate visualizations. Microsoft's agent schema documentation explicitly describes Code Interpreter as a capability used to solve complex math problems, analyze data, and generate visualizations. That directly matches the requirement to create charts and visualizations from a Microsoft Excel workbook.

Microsoft documentation also explains that code interpreter supports working with Excel files and is used for scenarios such as data analysis, statistical computations, and generating charts. This makes it the correct configuration for an agent that must reason over workbook data and produce chart-based outputs. By contrast, the image generator capability is for creating images, not for analyzing workbook data. The Scrum Assistant and Customer Insights Assistant options are templates, not the specific technical capability required to read data and build charts from an Excel workbook.

**NEW QUESTION 18**

Your organization has a Microsoft 365 subscription. All users are assigned Microsoft 365 Copilot licenses.

Some users report receiving Copilot responses that contain information from a Microsoft SharePoint site named Finance. The users report that the information is commercially sensitive.

You need to prevent Copilot from providing responses that contain information from the Finance site.

What should you do?

- A. From Microsoft Purview, create an Information Barrier (IB) policy.
- B. From Microsoft Defender, create a data connector.
- C. From Microsoft Entra, create a Conditional Access policy.
- D. From the Finance site, configure permissions.

Answer: D

**NEW QUESTION 22**

Your company has a written compliance policy that requires all emails be retained for seven years, and then permanently deleted. Which Microsoft Purview solution should you use?

- A. Information Protection
- B. Insider Risk Management
- C. Data Loss Prevention
- D. Data Lifecycle Management

Answer: D

Explanation:

The correct answer is D. Data Lifecycle Management. Microsoft Learn states that Microsoft Purview retention policies and retention labels, managed under Data Lifecycle Management, support three core outcomes: retain-only, delete-only, and retain and then delete. The requirement in this question is exact: keep email for seven years and then permanently delete it. That is a textbook retain and then delete retention configuration, which Microsoft documents as part of Purview's retention capabilities. Microsoft also recommends using Microsoft 365 retention policies and labels for retaining and deleting emails rather than relying on older Exchange-only approaches in most modern compliance scenarios.

The other options do not meet the requirement. Information Protection focuses on labeling and protecting sensitive information. Insider Risk Management is used to detect and investigate risky user behavior. Data Loss Prevention helps prevent inappropriate sharing or exfiltration of sensitive data. None of those are designed to enforce a timed seven-year retention period followed by automatic permanent deletion. The Microsoft Purview solution explicitly built for that lifecycle requirement is Data Lifecycle Management.

**Answer Area**

John can [answer choice].

View all the users in the Microsoft Entra tenant

view all the content in Microsoft SharePoint sites

read all the content in Microsoft Exchange mailboxes

perform eDiscovery of Microsoft 365 Copilot prompts

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

The correct answer is View all the users in the Microsoft Entra tenant. In the exhibit, John is assigned the Global Reader role. Microsoft documents that the Global Reader role is intended for users who need to view administrator features and settings in admin centers that a Global Administrator can view, but without edit permissions. That makes it appropriate for read-only visibility into tenant-wide directory and admin information, including users in Microsoft Entra. The other answer choices are not supported by the Global Reader role. Microsoft distinguishes admin-center visibility from access to content in workloads such as SharePoint sites and Exchange mailboxes. Global Reader is a read-only administrative role, not a content access role for reading all documents or mailbox items. Likewise, performing eDiscovery of Microsoft 365 Copilot prompts requires Purview eDiscovery permissions or role group membership, not merely the Global Reader role. Microsoft documents eDiscovery permissions separately in Purview role groups. Therefore, based on the assigned role shown, the valid completion is that John can view all the users in the Microsoft Entra tenant.

**NEW QUESTION 45**

A user named User1 creates a Microsoft 365 Copilot agent named Agent1 and shares the agent to a user named User2. What occurs if an admin blocks Agent1?

- A. Agent1 is accessible to User1 and User2, and no other users can install Agent1.
- B. Agent1 is removed from User1 and User2, and no users can install Agent1.
- C. Agent1 is accessible to User1 and User2 until the users manually uninstall Agent1. No other users can install Agent1.
- D. Agent1 is removed from User2, and User1 can continue to use Agent1.
