Microsoft Power Platform Fundamentals

<https://www.certleader.com/PL-900-dumps.html>

NEW QUESTION 1

A company manages a chain of retail stores. The company stores a list of retail store names and numbers in one Power BI table. The company stores sales transaction data including a transaction ID in another table. The transaction ID includes the store number. You need to show the store name for all retail transactions in all Power BI reports. Which tool should you use?

- A. Query Editor
- B. Power BI Service
- C. Microsoft Excel
- D. Data Connector

Answer: A

Explanation:

Power BI Desktop comes with Query Editor, where you can connect to one or many data sources, shape and transform the data to meet your needs, then load that model into Power BI Desktop.

NEW QUESTION 2

You use Microsoft Flow to create a flow that automatically sends email to a project manager when project team members mark a task as complete. Project team members are prematurely marking tasks as complete. You must add quality control into the process by sending an email to a project lead for confirmation that the task is in fact complete before sending the email to the project manager. You need to modify the flow. Which component should you use?

- A. a process argument
- B. a condition
- C. an expression
- D. a trigger
- E. an action

Answer: B

Explanation:

Use a condition and set the action to send an email.

NEW QUESTION 3

You create a user-owned custom entity by using Common Data Service. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can change the entity ownership from User to Organization-owned.	☐	☐
You can create a business rule for a custom entity that can be used in a Flow.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: No
Common Data Service supports two types of record ownership. Organization owned, and User or Team owned. This is a choice that happens at the time the entity is created and can't be changed.
Box 2: Yes
By combining conditions and actions, you can do any of the following with business rules: Set field values
Clear field values
Set field requirement levels Show or hide fields
Enable or disable fields
Validate data and show error messages
Create business recommendations based on business intelligence.

NEW QUESTION 4

Your company has an on premises Microsoft SQL Server database that contains legacy sales data. You must display information from the database in a new Power Apps app. You need to establish a secure connection between the database and the app. What should you use?

- A. Data source
- B. App
- C. Gateway
- D. Flow

Answer: C

Explanation:

For an on-premises database, identify a data gateway that was shared with you (or create one). Specify Connect using on-premises data gateway, type or paste the server name, the database name, the user name, and the password for the database that you want to use, and specify the authentication type and the gateway.

NEW QUESTION 5

A rapidly growing company wants to empower users to build apps, automate business processes, and analyze data without requiring I expertise or development skills and without increasing IT expenses and dependencies. You need to recommend tools so that users can accomplish specific tasks. Which tools should you recommend? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Scenario	Application
Build automatic workflows that access multiple data sources.	AI Builder Power Apps Microsoft Flow Azure Functions Power BI
Create custom apps that address specific business needs.	AI Builder Power Apps Microsoft Flow Azure Functions Power BI
Design insightful data visualizations.	AI Builder Power Apps Microsoft Flow Azure Functions Power BI

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Microsoft Flow
Microsoft Flow, now called Power Automate, is cloud-based software that allows employees to create and automate workflows and tasks across multiple applications and services without help from developers.
Box 2: Power Apps
PowerApps is a suite of apps, services, connectors and data platform that provides a rapid application development environment to build custom apps for your business needs.
Box 3: Power BI
Power BI is a business analytics solution that lets youvisualizeyour data and share insights across your organization, or embed them in your app or website. Connect to hundreds of data sources and bring your data to life with live dashboards and reports.

NEW QUESTION 6

You build a flow using a template. You want to add support for additional business scenarios. You need to ensure that the new workflow does not break existing functionality. Which flow editing utilities should you use? To answer, drag the appropriate tools to the correct requirements. Each tool may be used once, more than once, or not at all You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Tools	Requirement	Tool
Test		
Flow Checker	Check the new flow for any errors or warnings.	Tool
	Run the flow using previously processed data.	Tool
	Monitor the flow as it is running.	Tool

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Flow Checker
The Flow checker feature will promote higher quality flows by ensuring you follow best practices. By running the checker, you will be able to get answers to questions like: which areas of my flow implementation pose a performance or reliability risk?
For each issue identified, the Flow checker points to specific occurrences within the flow where improvements may be required. And more importantly, you learn how to implement these improvements by following detailed guidance.
Box 2: Test
Box 3: Test

NEW QUESTION 7

A company performs on-site inspections and services for air industrial equipment. Field technicians must perform a series of maintenance checks every time they visit a customer site. Every technician performs maintenance tasks in a different order. Some technicians miss steps. You need to ensure that all technicians perform the same steps in the same order. What should you use?

- A. Business process flow
- B. AI Builder
- C. Business rule
- D. Virtual Agent

Answer: A

Explanation:

You can help ensure that people enter data consistently and follow the same steps every time they work with a customer by creating a business process flow. For example, you might want to create a business process flow to have everyone handle customer service requests the same way, or to require that people get approval for an invoice before submitting an order. Business process flows use the same underlying technology as other processes, but the capabilities that they provide are very different from other features that use processes.

NEW QUESTION 8

A toy company creates a text classification model in AI Builder to monitor customer feedback for specific key words. When negative feedback is received for a toy, the company wants to proactively perform engineering reviews for the toy and schedule additional training sessions for workers who produce the toy. What are two possible ways to achieve the goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Create a canvas app.
- B. Implement the Virtual Agent.
- C. Build a Microsoft Flow.
- D. Use the Common Data Model.

Answer: AC

Explanation:

A (not D): AI Builder comes with:
A ready-to-use business card reader available in canvas as well as in model-driven apps. Business card reader (Canvas)
Business card reader (Model-driven)
Additional canvas components to leverage your AI Builder form processing or object detection models canvas apps.
C: Use the results from your AI model across Power Platform to create end-to-end solutions that meet your business needs, even if you have no coding skills. For example, create a flow that automates document processing in Power Automate, or an app created with PowerApps that predicts whether a supplier will be out of compliance.

NEW QUESTION 9

A large retail company implements Power Apps, Microsoft Flow, and the Common Data Service. The board of directors is asking whether users are finding value in the technology. The company would like to measure and report usage of the software. You need to recommend a tool to determine software usage. What should you recommend?

- A. Microsoft Intune
- B. Azure Stream Analytics
- C. Power Platform Analytics
- D. Dynamics 365 Product Insights

Answer: C

Explanation:

The Power Platform Analytics Usage report is the default reports seen by the logged in environment admin. It provides total app launches and daily active users across all apps in the environment. Admins can filter the view with attributes like device platform, player version, country, state, and city.

NEW QUESTION 10

A company plans to implement solutions that use Common Data Service as a data storage. You need to recommend features to meet the company's needs. Which features should you recommend? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Features	Requirement	Feature
business rules		
business process flows	Validate data across multiple fields and entities regardless of the app used to create data.	Feature
Common Data Model	Create visual guides to ensure that users enter data and perform tasks in a consistent manner.	Feature
	Accelerate development by using a standard set of entities for the most common scenarios.	Feature

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: business rules
You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

Box 2: business process flows
Flows Power Automate includes several types of processes, each designed for a different purpose:

- Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.
- Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.
- Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.
- Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.
- Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.

Box 3: Common Data Model
Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

NEW QUESTION 10

A bank uses Power Platform apps and flows to support business processes. The company would like to use historical client data to predict whether a client's loan application is likely to be approved or rejected. You need to use AI Builder to implement the solution. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions		Answer area
Publish the model.		
Export data into AI Builder.		
Train the model.		
Import data into Common Data Service.	➡	⬆
Use the model in PowerApps or Microsoft Flow.	⬅	⬇

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Import data into Common Data Service.
AI Builder requires the use of Common Data Service, which is the data platform for PowerApps and allows you to store and manage business data. Common Data Service is the platform on which Dynamics 365 apps are built so if you're a Dynamics 365 customer, your data is already in Common Data Service.
Step 2: Train the model Step 3: Publish the model
The last step is to publish your model.
Step 4: Use the model in PowerApps or Microsoft Flow.

NEW QUESTION 11

A company uses Dynamics 365 Supply Chain Management.
You need to use Microsoft Flow to automate the process of receiving and tracking raw materials. Which type of connector should you use?

- A. Common Data Service
- B. Dynamics 365
- C. Dynamics 365 for Fin & Ops
- D. Dynamic Signal

Answer: A

Explanation:

Dynamics 365 for Finance and Operations is now being licensed as Dynamics 365 Finance and Dynamics 365 Supply Chain Management.
You can use Common Data Service to enable the flow of data between Finance and Operations apps and Dynamics 365 Sales.

NEW QUESTION 16

A user is creating their first canvas app in Power Apps.
The user does not know what types of controls they can include. You need to recommend solutions for the user.
Which types of controls would you recommend using in Power Apps? To answer, select the appropriate control in the dialog box in the answer area.
NOTE: Each correct selection is worth one point.

Scenario	Control
View the date, time, and location of upcoming internal meetings.	Meeting-screen template Gallery List box
Create a meeting request from within the app.	Meeting-screen template Gallery List box
Drill down into customer contact records in Dynamics 365 Sales to view a photo of a customer you are meeting.	Image People-screen template Add picture

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Box 1: Gallery

A Gallery control can show multiple records from a data source, and each record can contain multiple types of data. For example, a Gallery control can show multiple contacts with each item showing contact information that includes a name, an address, and a phone number for each contact.

Box 2: Meeting-screen template

In a canvas app, add a meeting screen that lets users create and send meeting requests from their Office 365 Outlook accounts. Users can search for attendees in their org and add external email addresses. If your tenant has meeting rooms built into Outlook, users can select a location as well.

Box 3: Image

If you add one or more Image controls to your app, you can show individual images that aren't part of a data set, or you can incorporate images from records in data sources.

NEW QUESTION 18

A distribution company has multiple warehouses.

Tax rates charged on sales orders need to be calculated based on locality and region. You need to recommend a cost-effective solution that can be implemented quickly. What should you recommend?

- A. Check AppSource for a tax add-on.
B. Create alerts in Dynamics 365 Finance for tax table changes.
C. Implement the Common Data Model.
D. Run a Power BI report.
E. Write scripts and code tax updates.

Answer: B

NEW QUESTION 22

You create a business rule on contact entity to enforce the requirement that users must enter either a telephone number, fax number, or an email when creating a new record.

The company decides to remove fax number from the condition. You need to update the business rule.

What are two ways of achieving the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Save a copy of the rule and change the conditio
B. Deactivate and delete the original rule.
C. Deactivate the business rule and change the condition.
D. Take a snapshot of the business rule and change the condition.
E. Change the condition and activate the change.

Answer: AD

NEW QUESTION 25

A company plans to implement Power Platform apps. The company does not plan to use any development tools or plug-ins.

Which actions can you perform?

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can synchronize account names with a third-party proprietary database.	☐	☐
You can create invoices from orders and then send the invoices to the customer.	☐	☐

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

The Power Platform uses PowerApps, Power BI, and Power Automate (previously named Flow) to customize, extend, and build all the apps you need for your business and unlock the potential of Office 365 and Dynamics 365.

NEW QUESTION 28

A company uses a third party application and an approval process via email. At the end of the month, the IT department enters the data into Microsoft Excel to create pivot charts.

The Excel pivot charts must use the same data source as Dynamics 365 Field Service to generate charts and reports.

You need to recommend a solution.

What should you recommend? To answer, select the appropriate configuration in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Solution
Create an approval workflow.	Dynamics 365 Workflow Notifications Microsoft Outlook Integration AI Builder Microsoft Flow
Connect to report data.	Common Data Service and Power BI Third-party from AppSource Custom Code flat file integration Dynamics 365 Field Service

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Box 1: Dynamics 365 Workflow notifications

You can configure the system to send email messages to users when workflow-related events occur. Note:

- Go to Navigation pane > Modules > System administration > Users > Users.
- In the list, find and select the desired record.
- On the Action pane, click User options.

Click the Workflow tab. Make sure that the Notifications section is expanded. In the Notifications section, you can specify how you want the user to be notified about workflow-related events.

Box 2: Dynamics 365 Field Service

Supply Chain Management enables synchronization of business processes between Dynamics 365 Supply Chain Management and Dynamics 365 Field Service. The integration scenarios are configured by using extensible Data integrator templates and Common Data Service to enable the synchronization of business processes. Standard templates can be used to create custom integration projects, where additional standard and custom fields and entities can be mapped to adjust the integration and meet specific business needs.

NEW QUESTION 32

A company uses Dynamics 365 Supply Chain Management.

When a sales order is created for one of the customers that a specific user manages, a Microsoft Outlook task must be created to remind the user to perform any follow up activities that are required.

You need to implement the functionality to create Outlook tasks.

Which two features should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. AI Builder
- B. Power Apps
- C. Business Events
- D. Microsoft Flow
- E. Common Data Service

Answer: CD

Explanation:

Business events in Microsoft Power Automate

Business events can be consumed in Microsoft Power Automate via the application connector. The connector has a trigger that is named when a business event occurs. This trigger can be used to subscribe to any of the business events that are available in the target instance of the application.

NEW QUESTION 37

You need to use Microsoft Flow to perform data-management tasks when users interact with the sales opportunities in Dynamics 365.

Which three types of triggers can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. record requested
- B. record deletion
- C. record creation
- D. record updated
- E. record selected

Answer: BCD

Explanation:

Triggers like When a record is created, When a record is updated, and When a record is deleted initiate your

NEW QUESTION 42

This question requires that you evaluate the BOLD text to determine if it is correct.

A company requires that service representatives schedule customer visits every six months. Each service representative is required to enter a scheduled task for the next checkup as they are leaving a client site. A service representative wants to automate task entry by creating a business process flow that can be initiated from the service call screen on a phone.

Review the underlined text. If it makes the statement correct, select “No change is needed.” If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. a scheduled
- C. an instant
- D. an action

Answer: D

Explanation:

Note: Create a flow (see step 6 below)

- 1). Sign in to PowerApps.
- 2). In the left navigation bar, select Business logic, and then select Flows.
- 3). In the upper-left corner of the My Flows page, select New, and then select Create from blank.
- 4). Option to create a flow without using a template

Near the bottom of the page that appears, select Search hundreds of connections and triggers.

- 5). In the search box, type PowerApps, and then select the PowerApps icon.
- 6). Create a PowerApps trigger
- 7). On the next page, select the PowerApps icon again, and then select New step.
- 8). In the box that says Search connectors and actions, specify an action for your flow, as in this example:

NEW QUESTION 47

You plan to use Microsoft Flow to monitor what people are saying about your company's products. You store the feedback for research and development purposes.

You need to recommend Flow components to use for the solution.

To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Components

Answer Area

action	Requirement	Component
expression	Retrieve the top five posts from your company's Facebook page.	Component
service	Enter the resulting posts into the product database.	Component
trigger	Combine author and link fields into a single field.	Component
flow type	Run flow every hour.	Component

Components	Answer Area		
		Requirement	Component
action			
expression	Retrieve the top five posts from your company's Facebook page.		trigger
service	Enter the resulting posts into the product database.		action
trigger	Combine author and link fields into a single field.		expression
flow type	Run flow every hour.		flow type

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Box 1: Trigger

A trigger is something that triggers or starts the workflow. It could be a new file uploaded to a document library, a new item created in the list or an email sent to your Inbox – something that will start (kick-off the workflow).

There are two types of triggers:

- Automatic trigger is pre-programmed into the workflow based on a certain rule (i.e. new document or item created, email sent, etc.)
- Manual Trigger is a trigger initiated by a user. Unlike with automatic trigger above, the workflow will only start when initiated manually by the end user (for example, from the Document Library for a selected file). Manual trigger is only supported for certain types of workflows (i.e. Get feedback from your manager for the selected file)

Box 2: action

An action is something that occurs as a result of the workflow. Box 3: expression

Sometimes users just need to do basic operations like getting the current time, adding numbers together, or replacing a part of a string of text. That's possible inline in any flow action. Microsoft Flow leverages the same Workflow Definition Language used by Azure Logic apps. For new users who are unfamiliar with the expression language, there is an inline help experience that shows how to use each expression as they build out their flow.

Box 4: flow type

There are four different Flow types that you can choose from when starting out. You can create a scheduled flow, automated flow, instant flow, or a business process flow.

NEW QUESTION 51

You are new to working with Microsoft Flow. You create a flow that extracts birth dates for users and then sends a birthday greeting email to users on their birthday.

The flow does not properly extract birth dates. Where should you make changes?

- A. Connectors
B. Expression
C. Templates

Answer: A

Explanation:

Select the new Date Time connector. There you will see all of the actions, which help you to convert time zones to format them for local time in an email, add or subtract times, or just get the current time.

NEW QUESTION 53

You have a Power BI report.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statement	Yes	No
You can export data from a visualization in a Power BI report.	☐	☐
You can show the data behind a visual report on your screen without exporting the data.	☐	☐
You must export data to view supporting data for a KPI.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Yes
If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report.
Note: Export data from a Power BI dashboard

>

Choose the Export data icon.

>

Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data.

>

Your browser will prompt you to save the file. Once saved, open the .csv file in Excel.

Box 2: No
Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel.

Box 3: Yes
A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file.
Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.

NEW QUESTION 58

A company is using Power BI to build visualizations.
The company's IT support team needs to know when to install Power BI Desktop on users' computers and where the Power BI Service will suffice to perform tasks. You need to recommend solutions for the company.
What should you recommend? To answer, drag the appropriate components to the correct requirements. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Tools	Answer Area	
	Requirement	Component
Power BI Service only	Create dashboards.	Tool
Power BI Desktop only	Create reports.	Tool
Power BI Desktop or Power BI Service	Create calculated columns.	Tool
	Configure security.	Tool
	Configure sharing.	Tool

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

In a Venn diagram comparing Power BI Desktop and the Power BI service, the area in the middle shows how the two overlap. Some tasks you can do in either Power BI Desktop or the service. The two sides of the Venn diagram show the features that are unique to the application and the service.

NEW QUESTION 60
