

Microsoft

Exam Questions AB-730

AI Business Professional

NEW QUESTION 1

A colleague from another company shares a link to a prompt.
When you select the link, you receive the following response: "Prompt not found. Sorry, it looks like the prompt is no longer available."
What is a possible cause of the response?

- A. The prompt is a scheduled prompt.
- B. The prompt contains a reference to a file that you do NOT have access to.
- C. The prompt is outdated.
- D. The prompt contains a file that has a sensitivity label applied.
- E. The prompt is outside of your organization.

Answer: E

Explanation:

Microsoft 365 Copilot operates within the security, compliance, and identity boundaries of a Microsoft 365 tenant. Shared prompts, prompt links, and Copilot artifacts are governed by organizational access controls and tenant isolation. If a prompt is created and shared from outside your organization, cross-tenant access may not be supported depending on the sharing configuration and administrative policies.
When a user attempts to open a prompt that resides in another organization's tenant without proper cross-tenant sharing permissions, Copilot cannot locate or validate the resource within the user's own environment. As a result, the system displays a "Prompt not found" message.
Option B would typically result in an access or permissions error rather than the prompt being unavailable entirely. Sensitivity labels and scheduled prompts do not inherently cause a "not found" error. Therefore, the most likely cause is that the prompt exists outside your organization's tenant boundary and is not accessible to you.

NEW QUESTION 2

You need to access Microsoft 365 Copilot from a web browser. Which URL should you use?

- A. https://m365.cloud.microsoft
- B. https://copilotstudio.microsoft.com
- C. https://myapps.microsoft.com
- D. https://myaccountmicrosoft.com

Answer: A

Explanation:

Microsoft 365 Copilot can be accessed via its dedicated web experience for enterprise users. The correct web entry point for Microsoft 365 Copilot is https://m365.cloud.microsoft, which provides authenticated access to Copilot features within the Microsoft 365 environment.
This URL routes users into the Microsoft 365 ecosystem where Copilot integrates with organizational data such as SharePoint, OneDrive, Teams, and Outlook. It ensures that users are authenticated through Microsoft Entra ID and that access controls are enforced according to tenant policies.
Option B refers to Copilot Studio, which is used to build and manage custom copilots and agents rather than access the Microsoft 365 Copilot chat experience.
Option C (My Apps) is a general application launcher portal. Option D is an incorrect account management URL and does not provide Copilot access.
Therefore, to access Microsoft 365 Copilot from a web browser, the correct URL is https://m365.cloud. microsoft.

NEW QUESTION 3

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area		
Statements	Yes	No
Microsoft 365 Copilot can surface data from Microsoft Teams chats.	☐	☐
Microsoft 365 Copilot can schedule, draft, and send emails based on certain conditions.	☐	☐
Microsoft 365 Copilot can summarize, draft, and answer questions about content from Microsoft Teams meetings.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Microsoft 365 Copilot can use Microsoft Graph-grounded data (based on the user's permissions) to help users work with Microsoft 365 content. This includes surfacing and summarizing information from Teams chats, so statement 1 is true. Copilot can also summarize and generate content related to Teams meetings (for example, meeting recap details, key discussion points, and follow-up actions when meeting artifacts such as transcript/notes are available), and it can answer questions and draft related content—so statement 3 is true.
Statement 2 is false because, while Copilot can draft emails and help prepare messages, it does not independently schedule and send emails automatically based on conditions as a native Copilot function. Conditional sending is typically handled through workflow automation tools (for example, Power Automate) and still requires appropriate configuration, permissions, and governance. In enterprise environments, this separation helps reduce risk by ensuring that automated outbound communication remains controlled, auditable, and compliant.

NEW QUESTION 4

Select the answer that correctly completes the sentence.

Answer Area

You are creating an agent in the Microsoft 365 Copilot app. The agent persona must be warm and friendly. To set the persona, you should modify the

capabilities.

description.

instructions

suggested prompts.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The correct answer is instructions because an agent's persona—such as being warm, friendly, formal, or analytical—is defined through its behavioral and communication guidance. In Microsoft 365 Copilot, the Instructions field controls how the agent responds, including tone, style, personality, response structure, and interaction patterns. The description typically explains what the agent does, not how it communicates. Capabilities define what tasks the agent can perform, such as summarizing documents or analyzing data. Suggested prompts provide example user queries but do not control the agent's personality or communication style. To establish a warm and friendly persona, the instructions should explicitly state guidance such as: "Respond in a supportive, conversational tone. Use clear and positive language. Be encouraging and approachable." This ensures consistent tone across all interactions. Defining persona through instructions reflects prompt engineering best practices in generative AI, enabling predictable behavior, improved user experience, and alignment with organizational communication standards within Microsoft 365 Copilot environments.

NEW QUESTION 5

Select the answer that correctly completes the sentence.

Answer Area

Overreliance is a common risk associated with generative AI, where

users exploit vulnerabilities to elicit unauthorized behavior.

the model is tricked into exposing confidential information.

the model generates misleading, inaccurate, or irrelevant content.

users accept the AI-generated output without verifying its accuracy

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Overreliance is a common risk associated with generative AI, where

users exploit vulnerabilities to elicit unauthorized behavior.

the model is tricked into exposing confidential information.

the model generates misleading, inaccurate, or irrelevant content.

users accept the AI-generated output without verifying its accuracy

NEW QUESTION 6

You use Microsoft 365 Copilot.
You regularly upload the same five files to Copilot chats.
You need to simplify referencing the files in the chats.
What are two ways to achieve the goal?

- A. Send a prompt that includes the files, and then save the prompt.
- B. Create a notebook that references the files.
- C. Ask the data engineers to create a fine-tuned model.
- D. Create an agent that has a knowledge source.
- E. Zip the documents and upload the ZIP file to the chats.

Answer: BD

Explanation:

Microsoft 365 Copilot provides structured ways to persist and reuse knowledge sources to avoid repeatedly uploading the same files. Creating a notebook that references the five files (Option B) allows those documents to remain attached within a persistent workspace. Copilot can then consistently ground responses in those files without re-uploading them for every conversation. Creating an agent with a defined knowledge source (Option D) also provides a reusable solution. By configuring the five files as part of the agent's knowledge base, the agent can automatically reference them in future interactions. Saving a prompt does not persist file attachments. Fine-tuning models is not part of standard Microsoft 365 Copilot user workflows. Uploading a ZIP file does not improve reference management and may reduce accessibility of individual documents. Therefore, the correct solutions are to create a notebook that references the files and to create an agent with a knowledge source.

NEW QUESTION 7

You are a project coordinator for a small consulting firm.
 You are responsible for tracking client communications, managing project timelines, and preparing weekly status updates for internal stakeholders.
 You have a Microsoft 365 Copilot license.
 You create an agent to help you monitor project milestones, follow up on client emails, and generate weekly summary reports.
 With whom can you share the agent?

- A. only Microsoft Teams channel members
- B. any person who has a valid email address
- C. the people in your organization and people that have personal Microsoft accounts
- D. only the people in your organization

A.

Answer: D

NEW QUESTION 8

You sign in to the Microsoft 365 Copilot app by using your work account as shown in the following exhibit

A colleague tells you that when they open the Microsoft 365 Copilot app, they have access to the Researcher agent. You need to access to the Researcher agent. What should you do?

- A. From Microsoft Edge, use your work account to sign in to <https://copilot.microsoft.com>.
- B. Select Explore agents and then search for Researcher.
- C. Sign in to the Copilot app by using a personal account
- D. Request a Microsoft 365 Copilot license from an administrator.

A.

Answer: B

NEW QUESTION 9

You use Microsoft 365 Copilot.
You need to delete all your conversations by using the least amount of effort.
What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. the Microsoft 365 Copilot web app
B. the My Account portal in Microsoft 365
C. the Microsoft 365 Copilot desktop app
D. the Settings app in Windows 11

A.

Answer: B

Explanation:

Microsoft provides centralized activity management controls through the My Account portal, which allows users to manage privacy settings, activity history, and data associated with Microsoft 365 services, including Copilot. When the requirement is to delete all conversations with minimal effort, the most efficient method is to use the account-level activity management tools rather than deleting conversations individually.

The My Account portal enables bulk management of Copilot activity data, allowing users to clear conversation history in a consolidated manner. This approach aligns with Microsoft's privacy-by-design framework, giving users control over their AI-generated interaction history without requiring administrative intervention. Using the Copilot web or desktop app would typically require manually deleting conversations one at a time, increasing effort. The Windows 11 Settings app is unrelated to Microsoft 365 Copilot data management.

Therefore, to delete all Copilot conversations efficiently and with the least amount of effort, the correct approach is to use the My Account portal in Microsoft 365.

NEW QUESTION 10

HOTSPOT
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can chat with the Analyst agent from within an existing Microsoft 365 Copilot conversation.	☐	☐
You can chat with the Researcher agent from within an existing Microsoft 365 Copilot conversation.	☐	☐
You can chat with multiple agents concurrently within an existing Microsoft 365 Copilot conversation.	☐	☐

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
You can chat with the Analyst agent from within an existing Microsoft 365 Copilot conversation.	☒	☐
You can chat with the Researcher agent from within an existing Microsoft 365 Copilot conversation.	☒	☐
You can chat with multiple agents concurrently within an existing Microsoft 365 Copilot conversation.	☒	☐

NEW QUESTION 10

HOTSPOT
While using Microsoft 365 Copilot, content is returned from a website. You need to verify the exact search query used to find the website. What should you use?
To answer, select the appropriate options in the answer area.

Answer Area

Today

Give me the current temperature in Ghana. Don't be verbose. Just the temp.

 Copilot 

83°F in Accra, Ghana 1.

NEW QUESTION 13

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Prompt injection can cause data exposure and unintended system behavior.	☐	☐
Prompt injection can be used to embed malicious or harmful instructions.	☐	☐
Prompt injection is a security vulnerability unique to generative AI systems that interpret and respond to natural language inputs.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Prompt injection is a generative AI security risk where an attacker inserts instructions (often hidden in text, documents, webpages, or user inputs) to override or manipulate the assistant's intended behavior. This can lead to unintended actions such as ignoring policy controls, producing unsafe outputs, or attempting to reveal sensitive information. Because generative AI systems follow natural-language instructions, they can be socially engineered to prioritize malicious content unless safeguards are in place. This is why prompt injection can cause data exposure (for example, attempting to extract confidential content from grounded sources) and can also embed harmful instructions that redirect the model's behavior. In enterprise settings like Microsoft 365 Copilot, mitigations include grounding boundaries, permission trimming, content filtering, and instruction hierarchy (system policies over user instructions). From a business governance perspective, users should treat untrusted inputs (emails, documents, web text) as potentially hostile and apply least-privilege access and validation when using AI outputs in decision-making.

NEW QUESTION 16

You receive several images from a colleague. You suspect that the images were generated by using Microsoft 365 Copilot. What can you use to verify whether the images were AI-generated?

- A. file names
- B. watermarks
- C. content credentials
- D. file descriptions

Answer: C

NEW QUESTION 20

HOTSPOT - Select the answer that correctly completes the sentence.

Answer Area

The Common Data Model
Enterprise data protection (EDP)
Sensitivity labels
Zero Trust

_____ in Microsoft 365 Copilot ensures that business data stays within a Microsoft 365 tenant and is **NOT** used to train AI models.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

The Common Data Model
Enterprise data protection (EDP)
Sensitivity labels
Zero Trust

_____ in Microsoft 365 Copilot ensures that business data stays within a Microsoft 365 tenant and is **NOT** used to train AI models.

NEW QUESTION 22

You are using Microsoft 365 Copilot to plan a trip and have asked Copilot to remember several details about the trip. You cancel the trip plans. You need to ensure that Copilot forgets the details. What should you do?

- A. From the My Account portal, delete the Copilot activity history.
- B. From Copilot delete custom instructions.
- C. From Copilot delete memories.
- D. From Copilot delete all the conversation about the trip.

Answer: C

Explanation:

Microsoft 365 Copilot includes a memory capability that allows it to retain user-provided preferences or details across interactions when explicitly instructed to remember them. These stored details are referred to as memories and are separate from standard conversation history. If you previously asked Copilot to remember specific trip-related details, those details are stored as structured memory items. Simply deleting the conversation does not necessarily remove stored memory entries. Likewise, deleting activity history through the My Account portal removes conversation records but does not directly manage structured Copilot memories. Custom instructions define persistent behavioral preferences and are unrelated to trip-specific stored data. To ensure Copilot no longer retains those trip details, you must delete the stored memories directly within Copilot. Microsoft documentation explains that users can view and manage saved memories and remove them individually to control what Copilot retains. Therefore, the correct action to ensure Copilot forgets the trip details is to delete the memories.

NEW QUESTION 24

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Word. Which two tasks can you achieve by using Copilot in Word?

- A. Insert a table of contents based on the headings in your document.
- B. Insert a custom watermark that has specific text and formatting.
- C. Generate a summary of the key points in your document.
- D. Customize the page margins to match your company's document standards.

Answer: AC

Explanation:

Copilot in Word assists with content generation, summarization, rewriting, and structural organization. It can analyze document headings and insert a table of contents based on structured heading styles, supporting document navigation. It can also generate summaries of key points, which aligns directly with generative AI text analysis capabilities.

Custom watermark formatting and precise page margin configuration are traditional Word formatting functions and are not core generative AI capabilities of Copilot.

Therefore, the correct answers are A and C.

=====

NEW QUESTION 27

You are a medical researcher.

You need to ensure that Microsoft 365 Copilot responds to you in a professional manner that is appropriate to your field. What is the best approach to achieve the goal?

- A. In the conversation, attach an example to your prompts.
- B. From Settings, configure Custom instructions.
- C. In the conversation, create a sample prompt and save it to the Copilot Prompt Gallery.
- D. From Settings, configure Copilot Memory.

Answer: B

Explanation:

Custom instructions allow users to define persistent preferences for tone, style, and response behavior across conversations. Microsoft documentation explains that Custom instructions help tailor Copilot responses to professional roles, communication styles, and domain expectations.

For a medical researcher requiring consistently professional, field-appropriate responses, configuring Custom instructions in Settings ensures that Copilot maintains the desired tone and terminology in future interactions.

Attaching examples influences only a single conversation. Saving prompts to the Prompt Gallery aids reuse but does not enforce tone globally. Copilot Memory stores factual preferences but is not intended for style configuration.

Therefore, the best and most comprehensive approach is to configure Custom instructions in Settings.

NEW QUESTION 31

You create a Microsoft 365 Copilot notebook and add a file named Process.docx from a local folder. Yesterday, you updated Process.docx in the local folder. What will occur when you chat in the notebook?

- A. The chat will reference both versions of Process.docx.
- B. The chat will reference the most recent version of Process.docx.
- C. The chat will reference only the original version of Process.docx.

A.

Answer: C

Explanation:

Microsoft 365 Copilot notebooks use the version of a file that was uploaded or attached at the time it was added to the notebook. When a document such as Process.docx is added from a local folder, Copilot references that uploaded snapshot of the file. If the file is later modified locally, the notebook does not automatically sync or refresh with the updated local version unless the updated file is re-uploaded.

Microsoft guidance on grounding and file references explains that Copilot works with the specific content stored in Microsoft 365 or the attached artifact within the notebook session. Since the updated version remains in the local folder and was not reattached, Copilot continues to use the originally added version.

Therefore, during subsequent chats in the notebook, Copilot references only the original uploaded version of Process.docx.

=====

NEW QUESTION 35

You use Microsoft 365 Copilot to generate a training plan.

You need to check if there are any existing training plans in your organization that are similar to the new training plan. What should you use in Copilot?

- A. Search
- B. Designer
- C. Apps
- D. Pages

A.

Answer: A

Explanation:

Microsoft 365 Copilot integrates with Microsoft Search to help users discover relevant content across their organization's Microsoft 365 data estate, including SharePoint, OneDrive, Teams, and Exchange. When the objective is to determine whether similar training plans already exist, the appropriate action is to perform a search across organizational content.

Using Search allows Copilot to query indexed enterprise documents and return files, plans, or related materials that the user has permission to access. This supports content reuse, avoids duplication of work, and aligns with Microsoft's guidance on leveraging organizational knowledge efficiently.

Designer is focused on visual content creation, Apps provides access to Microsoft 365 applications, and Pages is used for creating and organizing content within Copilot. None of these options are intended for discovering existing documents across the tenant.

Therefore, to identify similar existing training plans within your organization, the correct tool to use in Copilot is Search.

=====

NEW QUESTION 36

You are discussing Microsoft 365 Copilot with a colleague. The colleague asks which data Copilot uses to answer questions when using the Work scope. What should you tell your colleague?

- A. Copilot provides responses based only on the general knowledge that Copilot was trained on.
- B. Copilot provides responses based on all the data in your organization's Microsoft 365 environment and the general knowledge that Copilot was trained on.
- C. Copilot provides responses based only on data that the user can access and the general knowledge that Copilot was trained on.
- D. Copilot provides responses based only on data that the user can access.

A.

Answer: C

Explanation:

Microsoft 365 Copilot operates within two primary knowledge boundaries: its foundational large language model training data and the organizational data available within the Microsoft 365 tenant. However, Copilot strictly enforces Microsoft's security and compliance model, meaning it only retrieves and uses data that the signed-in user is authorized to access.

When using the Work scope, Copilot combines the general knowledge it was trained on with organizational data such as documents, emails, chats, calendars, and files stored in Microsoft 365. Importantly, Copilot respects role-based access control and existing permissions. It does not surface information from content the user does not have access to.

Option A is incomplete because Work scope includes organizational data. Option B is incorrect because Copilot does not access all tenant data indiscriminately; it is permission-scoped. Option D is incomplete because Copilot also leverages its general training knowledge.

Therefore, the correct explanation is that Copilot provides responses based only on data the user can access, combined with its general training knowledge.

NEW QUESTION 38

You receive the following response to a prompt: "Sorry, it looks like I can't respond to this. Let's try a different topic."

What is a possible cause of the response?

- A. The prompt is too vague to elicit a response.
- B. The prompt contains language that violates safety guidelines.
- C. The prompt contains more than five requests.
- D. The prompt is larger than the allowed context window.

Answer: B

Explanation:

Microsoft 365 Copilot follows Microsoft's Responsible AI principles and enforces strict content safety policies. When a prompt violates safety guidelines---such as containing harmful, abusive, illegal, or restricted content---the system may refuse to generate a response. The refusal message shown is consistent with safety filtering behavior.

Generative AI systems include moderation layers that evaluate prompts before generating output. If the prompt is classified as unsafe or non-compliant with policy, Copilot blocks the request and encourages the user to try a different topic.

A vague prompt typically results in a generic or clarifying response rather than a refusal. There is no fixed limit of five requests per prompt. Exceeding the context window usually results in truncation or processing errors, not a safety-based refusal message.

Therefore, the most likely cause of the response is that the prompt contains language that violates safety guidelines.

NEW QUESTION 40

You are comparing the difference between Microsoft 365 Copilot and Microsoft 365 Copilot Chat.

What is available in both versions?

- A. the Researcher agent
- B. Copilot Pages
- C. Copilot Notebooks

Answer: B

NEW QUESTION 45

You use Microsoft 365 Copilot to create a proposal in Microsoft Word based on a document in a Microsoft SharePoint library.

You need to ensure that the information cited in the proposal is accurate.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Manually verify the citations in the generated content.
- B. Use Copilot in Word to verify the citations.
- C. Create an agent that contains your organization's editorial standards and use the agent to verify the citations.
- D. Create a notebook that contains all the reference material and use the notebook to verify the citations.

Answer: A

NEW QUESTION 50

You create a Microsoft 365 Copilot notebook and add a file named Process.docx from a Microsoft SharePoint site as a reference.

Yesterday, a user updated Process.docx in the SharePoint site. What will occur when you chat in the notebook?

- A. The chat will reference only the original version of Process.docx.
- B. The chat will reference the most recent version of Process.docx.
- C. The chat will reference both versions of Process.docx.

Answer: B

NEW QUESTION 52

HOTSPOT

Select the answer that correctly completes the sentence.

Answer Area

From Microsoft 365 Copilot, you can use

agent settings

capabilities

instructions

suggested prompts

to help users begin conversations with an agent and guide the users to use the agent more effectively.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

From Microsoft 365 Copilot, you can use

agent settings

capabilities

instructions

suggested prompts

to help users begin conversations with an agent and guide the users to use the agent more effectively.

NEW QUESTION 53

You sign in to the Microsoft 365 Copilot app by using your work account as shown in the exhibit.

A colleague tells you that when they open the Microsoft 365 Copilot app, they have access to the Researcher agent. You need to access the Researcher agent. What should you do?

- A. From Microsoft Edge, use your work account to sign in to <https://copilot.microsoft.com>.
- B. Select Explore agents and then search for Researcher.
- C. Sign in to the Copilot app by using a personal account.
- D. Request a Microsoft 365 Copilot license from an administrator.

Answer: B

NEW QUESTION 55

HOTSPOT

What are two limitations of prompt scheduling in Microsoft 365 Copilot? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

You can schedule the prompt to run as often as:

Once per hour

Once per day

Once per week

The maximum number of times that a scheduled prompt can run is:

15 times

365 times

Unlimited

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You can schedule the prompt to run as often as:

Once per hour

Once per day

Once per week

The maximum number of times that a scheduled prompt can run is:

15 times

365 times

Unlimited

NEW QUESTION 56

You attend many Microsoft Teams meetings. You want to ensure that you can catch up on key points and next steps after each meeting. Which Microsoft 365 Copilot feature should you use after the meetings?

- A. Recap
- B. Meeting Whiteboard
- C. Meeting info
- D. Thread summaries

Answer: A

NEW QUESTION 59

You are a marketing assistant preparing for a budget meeting with your manager. You need to evaluate key spending and performance trends from the last year to understand which marketing channels deliver the best return on investment (ROI). What should you use in Microsoft 365 Copilot to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Analyst agent
- B. Chat
- C. the Researcher agent
- D. a notebook

Answer: A

NEW QUESTION 61

HOTSPOT
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
Microsoft 365 Copilot is trained on your organization's business data.	☐	☐
Microsoft 365 Copilot can summarize emails in mailboxes that were shared with you.	☐	☐
Microsoft 365 Copilot leverages the security framework defined in Microsoft 365 to provide you with access to emails, documents, and other enterprise data.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements

Microsoft 365 Copilot is trained on your organization's business data.

Microsoft 365 Copilot can summarize emails in mailboxes that were shared with you.

Microsoft 365 Copilot leverages the security framework defined in Microsoft 365 to provide you with access to emails, documents, and other enterprise data.

Yes

No

NEW QUESTION 65

You open Microsoft 365 Copilot as shown in the exhibit. What can you infer about the Standings conversation?

- A. The conversation contains only anonymous data.
- B. The conversation contains a verified response.
- C. The conversation was added to a notebook.
- D. The conversation contains a scheduled prompt.
- E. The conversation was shared.

Guaranteed success with Our exam guides

visit - <https://www.certshared.com>

Answer: B

NEW QUESTION 68

You have a Microsoft 365 subscription.
You do NOT have a Microsoft 365 Copilot license.
When you send a prompt in Microsoft 365 Copilot Chat, which three sources does Copilot Chat use to respond? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. chat data in Microsoft Teams
- B. your organization's databases
- C. the prompt context
- D. organizational data in Microsoft 365
- E. internet search data
- F. the conversation history

Answer: CEF

NEW QUESTION 69

HOTSPOT
Select the answer that correctly completes the sentence.

Answer Area

Microsoft Defender for Cloud

Microsoft Entra ID

Microsoft Intune

Microsoft Purview

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Microsoft Defender for Cloud

Microsoft Entra ID

Microsoft Intune

Microsoft Purview

enables organizations to apply governance policies to conversations generated by using Microsoft 365 Copilot.
