

Microsoft

Exam Questions 70-339

Managing Microsoft SharePoint Server 2016

NEW QUESTION 1

You have an on-premises SharePoint 2016 environment. You want to use Power View and PowerPivot features including Power View reports that are embedded in Microsoft Excel workbooks.

You need to deploy the new features.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Install PerformancePoint Services.
- B. Install SQL Server 2016 Reporting Services (SSRS) in SharePoint integrated mode.
- C. Install an Office Online server.
- D. Install SQL Server 2016 Reporting Services (SSRS) in native mode.

Answer: BC

NEW QUESTION 2

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You are the SharePoint administrator for a company.

You must provide an on-premises SharePoint solution that helps monitor and analyze your business in order to make informed business decisions that align with the objectives and strategies for the company. The solution must include the following features:

- Dashboards
- Scorecards
- Key Performance Indicators (KPI) You configure Power BI.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation: You need PerformancePoint Services which is a SharePoint BI tool. This is not the same as Power BI. References:

[https://technet.microsoft.com/en-us/library/ee424392\(v=office.16\).aspx](https://technet.microsoft.com/en-us/library/ee424392(v=office.16).aspx)

NEW QUESTION 3

Contoso, Ltd. acquires WingTip Toys. You manage the SharePoint farms for both organizations. The following table lists relevant information about farm indexing operations:

Farm	Indexed items	Entries per index partition	Indexes
Contoso	80 million	10 million	8
WingTip Toys	100 million	10 million	10

The content for Contoso and WingTip Toys must be indexed in the same search topology. Contoso wants to limit the number of Search Service applications and index partitions that must be deployed in the environment.

You need to configure the search topology for the Contoso farm to index content from both SharePoint farms. In the Contoso farm, what should you do?

- A. Create 10 additional index partitions in the existing Search Service application.
- B. Create a new Search Service application, and then add 18 index partitions.
- C. Create one additional index partition in the existing Search Service application.
- D. Create a new Search Service application that indexes content from the WingTip Toys farm.

Answer: A

NEW QUESTION 4

A company plans to deploy a SharePoint 2016 farm. The company only has enough budget to purchase four SharePoint Server licenses and two SQL Server licenses.

The farm must be highly available.

You need to deploy the SharePoint 2016 farm.

Which two server role sets can you use? Each correct answer presents a complete solution.

- A. Two front-end servers and two custom servers.
- B. Two front-end servers and two application servers.
- C. One front-end server, one application server, and two custom servers.
- D. One front-end server, one application server, one Search Server, and one Distributed Cache server.

Answer: AB

Explanation: References:

NEW QUESTION 5

You are a SharePoint administrator You set up a publishing website that is based on product catalogue data. You are configuring Search to retrieve and display

content from the publishing website. Content managers have site collection administrator permissions. You need to ensure that multiple crawls can occur for the same content at the same time. What should you do? To answer, select the appropriate value from each list in the answer area.

Search administrators must enable the following crawl type:

full crawl
continuous crawl

Role that must initiate a full index of the catalog:

site owner
content managers

Answer:

Explanation:

Search administrators must enable the following crawl type:

full crawl
continuous crawl

Role that must initiate a full index of the catalog:

site owner
content managers

NEW QUESTION 6

Your organization has a complex retention schedule that clearly defines retention policies for all document types. Each department has its own SharePoint site. In many cases, a single document library on a department site may contain financial files, human resources files, and project documentation. The following table lists the retention policies that are in place.

Content type	Retention policy
Financial records	Delete files after five years.
Human resources files	Archive files after four years.
Project documentation	Retain files for three years after the project end date.

You must administer retention rules from a single location for each type of document and must leverage out of the box functionality. You need to configure the

SharePoint environment to comply with the retention schedule. What should you do?

- A. Configure information management policies for the document libraries.
- B. Activate the Disposition Approval feature.
- C. Activate the In-Place Records Management feature.
- D. Configure information management policies on content types.
- E. Activate library and folder-based retention.

Answer: D

NEW QUESTION 7

You are a SharePoint Administrator for Contoso, Ltd.
While doing weekly maintenance you discover that a web application at <http://sharepoint.contoso.com> has an orphan site. The orphan site is located in the WSS_Content database.
You need to resolve the issue. What should you do?

- A. Run the following Windows PowerShell command: `$wa =Get-SPWebApplicationhttp://sharepoint.contoso.com$wa.Sites.SyncRoot`
- B. In Central Administration, select the <http://sharepoint.contoso.com> web applicatio
- C. Select the database that contains the orphaned sit
- D. Select Remove database and click O
- E. Run the Windows PowerShell cmdlet `Dismount-SPContentDB`.
- F. Run the following Windows PowerShell command: `$ContentDb = "WSS_Content"$db = Get-SPDatabase | where {$_.name -eq $ContentDb}Remove-SPContentDatabase $dbMount-SPContentDatabase–WebApplicaionhttp://sharepoint.contoso.com–Name $ContentDb`
- G. Run the following Windows PowerShell command: `$wa =Get-SPWebApplicationhttp://sharepoint.contoso.com$wa.Sites[0].Dispose();`

Answer: B

NEW QUESTION 8

You are the SharePoint administrator for Contoso. You are establishing a disaster recovery (DR) location for the SharePoint farm. You plan to create service application databases for the DR environment that are configured to use read-only mode.
You need to add the service applications to the passive farm.
For each service application, which option should you implement? To answer, select the appropriate option from each list in the answer area.

Service Application	Option
User Profile	<div><div></div><div>Failover SQL Server to the DR environment Grant the DR farm read and write access to the primary SQL Server Create a new database in the failover farm</div></div>
Managed metadata	<div><div></div><div>Failover SQL Server to the DR environment Grant the DR farm read and write access to the primary SQL Server Create a new database in the failover farm</div></div>

Answer:

Explanation:

Service Application	Option
User Profile	<div><div>▼</div><div>Failover SQL Server to the DR environment Grant the DR farm read and write access to the primary SQL Server Create a new database in the failover farm</div></div>
Managed metadata	<div><div>▼</div><div>Failover SQL Server to the DR environment Grant the DR farm read and write access to the primary SQL Server Create a new database in the failover farm</div></div>

NEW QUESTION 9

You are the SharePoint administrator for Contoso, Ltd. You deploy a new team site for the Marketing department to the company's SharePoint environment. The manager for the Marketing department must be able to add and manage groups in the new site. You need to grant the correct permissions to the manager while minimizing administrative impact. Which permission level should you grant to the manager?

- A. Designer
- B. Approver
- C. Site administrator
- D. Contributor
- E. Site Collection administrator

Answer: C

NEW QUESTION 10

You are a SharePoint Administrator at Contoso, Ltd. The company acquires WingTips Toys, which has its own SharePoint farm. Each company will keep its existing Active Directory.
You need to recommend methods to synchronize users.
For each activity, which user synchronization option should you recommend? To answer, select the appropriate option from each list in the answer area.
NOTE: Each correct selection is worth one point.

Manage user identities for both farms.	<div><div>▼</div><div>Active Directory Direct Import</div><div>Microsoft Identity Management</div><div>SharePoint User Profile service application</div></div>
Configure User Profile Synchronization for each farm.	<div><div>▼</div><div>Active Directory Direct Import</div><div>Microsoft Identity Management</div><div>SharePoint User Profile service application</div></div>

Answer:

Explanation: References:
<https://docs.microsoft.com/en-us/sharepoint/administration/install-microsoft-identity-manager-for-user-profiles>- <https://docs.microsoft.com/en-us/SharePoint/install/create-a-user-profile-service-application>

NEW QUESTION 10

You provision and configure a new SharePoint farm. The farm has not been backed up. You need to back up all services applications in the farm. How should you complete the Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to need to drag the split bar between panes or scroll to view content.

NEW QUESTION 13

You are the SharePoint administrator for a company. You have an on-premises SharePoint 2016 farm and an Office 365 SharePoint Online environment. The SharePoint Online environment uses a search index. You configure a Search Service application (SSA).

You need to plan the integration between the SSA to the Office 365 tenant.

For each step, which action should you perform? To answer, select the appropriate option from each list in the answer area.

1.	<div data-bbox="1635 341 1726 424" style="float: right;">▼</div> <div> Configure an Azure Access Control Service allocation proxy. Create a new managed account. Create a SharePoint claims provider. </div>
2.	<div data-bbox="1635 801 1726 884" style="float: right;">▼</div> <div> Register a trusted security token. Create a trusted root authority. Register a new claims provider. </div>
3.	<div data-bbox="1635 1291 1726 1374" style="float: right;">▼</div> <div> Publish the local service application Configure the SharePoint Service host. Configure a SharePoint Service application proxy. Create a new SharePoint subscription service proxy. </div>

Answer:

Explanation:

1.

Configure an Azure Access Control Service allocation proxy.
 Create a new managed account.
 Create a SharePoint claims provider.

2.

Register a trusted security token.
 Create a trusted root authority.
 Register a new claims provider.

3.

Publish the local service application
 Configure the SharePoint Service host.
 Configure a SharePoint Service application proxy.
 Create a new SharePoint subscription service proxy.

NEW QUESTION 18

You have an existing SharePoint 2016 on-premises environment. You use document libraries as file archives. Users report that they cannot upload documents larger than 3 gigabytes (GB).

You need to ensure that users can upload any type of file up to 4 GB in size. What should you do?

- A. On each front-end server in the farm, locate the following registry key: HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\WebClient\Parameter
- B. Set the value of the FileSizeLimitInBytes key to 4294967295. Then, restart the Web Client service.
- C. In SharePoint Central Administration, change the value of the Maximum Upload Size property for the web application.
- D. Run the following Windows PowerShell command: \$WebApp.MaximumFileSizePerExtension.Add("MaxFileSize", 4096000)
- E. Add the following markup to the web.config file for the web application: <httpRuntime executionTimeout="999999"maxRequestLength="4096000" requestValidationMode="2.0" />

Answer: B

NEW QUESTION 21

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have an existing SharePoint 2016 on-premises environment. You are configuring a SharePoint hybrid solution.

You must store all personal sites in Office 365.

You configure the Managed Metadata service and User Profile service applications. You create a My Site Host site collection. In SharePoint Central Administration, you grant the Create Personal Site and Follow People and Edit Profile permissions to users and configure hybrid OneDrive for Business settings. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 22

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the

solution meets the stated goals.
You have an existing SharePoint 2016 on-premises environment. You are configuring a SharePoint hybrid solution.
You must store all personal sites in Office 365.
You create App Management service, Managed Metadata service, and User Profile service applications. You create a web application and site collection for the My Site Host. You grant users the Create Personal Site and Follow People and Edit Profile permissions. Then, you create an audience for the users that will be redirected to Office 365. In the SharePoint Central Administration, you configure hybrid OneDrive for Business settings.
Does this solution meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 27

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You manage an on-premises SharePoint Server 2016 farm and SharePoint Online.
You plan to deploy a SharePoint Search solution. The solution must meet the following requirements: You implement bi-directional hybrid topologies.
Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 28

You plan to deploy SharePoint Server 2016 for an organization. The default language for the installation is English.
You need to install multiple language packs on the SharePoint Server.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Extract the language pack from the latest software updates download.

Run serverlanguagepack.exe for the language pack.

Run the SharePoint Products and Technologies Wizard.

Run the SharePoint Products Configuration Wizard.

Restart the SharePoint Server.

Download the language pack.

NEW QUESTION 40

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the SharePoint administrator for a company.

The SharePoint environment is causing excessive information to be recorded in the diagnostic logs.

You need to configure the SharePoint farm to only write events to the Windows event log that are equal to or more severe than the Error level.

You run the following Windows PowerShell command: Set-SPDiagnosticConfig -errorReportingEnable

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 43

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the SharePoint administrator for a company.

Users report that pages from the human resources (HR) division site are taking a long time to render. You need to troubleshoot the reasons for the page rendering issues.

You examine the Unified Logging Service (ULS) logs for performance issues and resource usage information. Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 45

You manage a SharePoint 2016 farm.

You need to import user profiles and photos from Active Directory to the SharePoint 2016 farm. Which tool or service should you use?

- A. User Profile service application
- B. Active Directory Import
- C. Microsoft Identity Manager
- D. Microsoft Forefront Identity Manager

Answer: A

Explanation: References:

<https://technet.microsoft.com/en-us/library/jj219646.aspx>

NEW QUESTION 48

You are an administrator for an on-premises SharePoint 2016 farm. A partner organization needs access to some of the resources in the farm. The partner organization does not use Windows Active Directory and does not have third-party signed certificates. The partner organization does not have the personnel or expertise to set up and manage a public key infrastructure (PKI). The partner organization can supply you with a file that lists the users who need access to your SharePoint farm.

All access to SharePoint resources must be authenticated.

You need to configure authentication for the partner organization. What should you do?

- A. Configure forms-based authentication.
- B. Configure a federated relying party trust.
- C. Configure a cross-forest trust.

D. Configure anonymous access.

Answer: A

NEW QUESTION 53

You are the administrator for a SharePoint 2016 farm.

You need to integrate Microsoft System Center Operations Manager dashboards and real-time diagnostic data with the SharePoint 2016 farm.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Configure Microsoft SharePoint Insights.
- B. Configure Visio Services.
- C. ConfigureSystemCenter Integration with Office 365 by using private cloud integration.
- D. Deploy the Microsoft System Center Operations Manager SharePoint web part.

Answer: BD

NEW QUESTION 58

You are the system administrator for a company. The company's infrastructure includes the following:

- a SharePoint farm named sharepoint.contoso.com
- a Microsoft Exchange web URL named exchange.contoso.com

You need to configure integration between SharePoint and Exchange to support eDiscovery. What should you do? To answer, select the appropriate option from each list in the answer area.

Answer area

Step	Action
1	<div><div><div>New-SPTtrustedSecurityTokenIssuer</div><div>.\Configure-EnterprisePartnerApplication.ps1</div><div>New-SPTtrustedServiceTokenIssuer</div></div><div>-Name Exchange -MetadataEndPoint "https://exchange.contoso.com/autodiscover/metadata/json/1"</div></div>
2	Run the following script: <code>\Configure-EnterprisePartnerApplication.ps1 -AuthMetadataUrl "https://sharepoint.contoso.com/_layouts/15/metadata/json/1" -ApplicationType SharePoint</code>
3	Add authorized users to the <div><div></div><div>Compliance Management</div><div>Discovery Management</div><div>RecordsManagement</div></div> role group.

NEW QUESTION 62

You are the administrator for a company's SharePoint 2016 farm. Employees use Search functionality extensively. Employees report that display as they enter queries are often irrelevant. You identify the following requirements:

- You must add several specific search refiners to Search results pages.
- You must expand query results by using synonyms for search keywords. You need to implement the improvements to search functionality.

For each requirement, which action should you perform? To answer, drag the appropriate action to the correct requirement. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Note: Each correct selection is worth one point.

Actions	Requirement	Action
Create and deploy a thesaurus.	Expand queries with synonyms.	Action
Configure authoritative pages.	Set up custom refiners.	Action
Manage query rules.	Edit phrases that are shown to users as they start typing a query.	Action
Manage query spelling correction.		
Create custom entity extractors.		
Manage query suggestion.		

Answer:

Explanation:

Actions	Requirement	Action
Create and deploy a thesaurus.	Expand queries with synonyms.	Create and deploy a thesaurus.
Configure authoritative pages.	Set up custom refiners.	Create custom entity extractors.
Manage query rules.	Edit phrases that are shown to users as they start typing a query.	Manage query suggestion.
Manage query spelling correction.		
Create custom entity extractors.		
Manage query suggestion.		

NEW QUESTION 64

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the

solution meets the stated goals.
You have an existing SharePoint 2016 on-premises environment. You are configuring a SharePoint hybrid solution.
You must store all personal sites in Office 365.
You create and configure a User Profile service application and deploy an App Management service application. You deploy a My Site host collection. In SharePoint Central Administration, you create an audience. On the Configure hybrid OneDrive for Business settings page, you enter a value for the My Site URL field and specify the audience.
Does this solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 67

You manage a SharePoint Server. The operating system, Search index files, and blob cache are located on separate drives.
You observe the following issues:
file lock out errors
delays in indexing of content
overall poor SharePoint Search performance
occasional virus and malware warning
You determine that antivirus scans are causing the issues. You need to resolve the issues.
How should you configure antivirus scanning? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Item	Action
Blob Cache folders	<div><div></div><div>exclude</div><div>include</div></div>
Search index files	<div><div></div><div>exclude</div><div>include</div></div>
Operating System files	<div><div></div><div>exclude</div><div>include</div></div>

Answer:

NEW QUESTION 68

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.
Once you answer a question in this section you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.
You are the SharePoint administrator for a company.
You must provide an on-premises SharePoint solution that helps monitor and analyze your business in order to make informed business decisions that align with the objectives and strategies for the company. The solution must include the following features:
• Dashboards
• Scorecards
• Key Performance Indicators (KPI) You configure Delve.
Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation: You need PerformancePoint Services which is a SharePoint BI tool. References:
[https://technet.microsoft.com/en-us/library/ee424392\(v=office.16\).aspx](https://technet.microsoft.com/en-us/library/ee424392(v=office.16).aspx)

NEW QUESTION 71

A company's purchasing department creates and manages all contracts with external vendors and partners. You have the following requirements:

- * You must create and save all contracts directly in a SharePoint document library. Contracts must remain on SharePoint for a period of at least seven years.
- * Any employee of the purchasing department must be able to create, edit, or delete a contract until the contract is marked as finalized.
- * Employees must not be permitted to delete finalized contracts.
- * You must grant purchasing department employees Contribute rights to the library. You need to configure the SharePoint document library.

What should you do? To answer, drag the appropriate actions to the correct steps. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Actions

Configure the In Place Records Management feature for the purchasing site collection.

Configure Record Declaration settings for the Contracts dicument library.

Configure a retention policy for the Contracts document library.

Create a Disposition workflow for the Contracts document library.

Manage item scheduling for the Con-tracts document library.

Answer Area

Step	Action
1	Create a purchasing department site collection based on the Publishing Portal template.
2	<div>Action</div>
3	Configure Records Declaration settings on the purchasing department site collection.
4	<div>Action</div>

Answer:

Explanation:

Actions

Configure the In Place Records Management feature for the purchasing site collection.

Configure Record Declaration settings for the Contracts dicument library.

Configure a retention policy for the Contracts document library.

Create a Disposition workflow for the Contracts document library.

Manage item scheduling for the Con-tracts document library.

Answer Area

Step	Action
1	Create a purchasing department site collection based on the Publishing Portal template.
2	<div>Configure the In Place Records Management feature for the purchasing site collection.</div>
3	Configure Records Declaration settings on the purchasing department site collection.
4	<div>Configure Record Declaration settings for the Contracts dicument library.</div>

NEW QUESTION 72

You are the administrator for a SharePoint 2016 farm. You configure a connection to the SharePoint Store. Users report that they cannot select or install specific apps from the SharePoint Store. Users can install other apps. You need to allow users to purchase and install any type of apps from the SharePoint Store. What should you do?

- A. Activate the Internet-facing endpoints feature for apps.
- B. Configure the Store settings to allow users to purchase apps.
- C. Deploy an App Catalog.
- D. Delete the existing App Catalog.
- E. Then, delete and provision the Subscription Setting and App Management service applications.

Answer: A

NEW QUESTION 76

You administer a SharePoint 2016 farm.
You must create a fully isolated sandbox term store for the user. Changes that the user makes must not affect the farm term store. The user must be able to manage the contributors list for the term store.
In the table below, identify the action that you must perform for each environment.
NOTE: Make only one selection in each column. Each correct selection is worth one point.

Answer area

Action	Central Administration	Site collection settings
Create Content Type Syndication Hub.	<input type="radio"/>	<input type="radio"/>
Add a new Managed Metadata service application.	<input type="radio"/>	<input type="radio"/>
Grant the Group Manager permission to the user.	<input type="radio"/>	<input type="radio"/>
Add the Managed Metadata Service application proxy to a default group.	<input type="radio"/>	<input type="radio"/>
Create a local term set.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation: **Answer area**

Action	Central Administration	Site collection settings
Create Content Type Syndication Hub.	<input checked="" type="radio"/>	<input type="radio"/>
Add a new Managed Metadata service application.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 79

You are assisting Company1 in the development of a website that displays information about their products to customers on the Internet. Company1 web publishers will not have access to publish directly to the Internet site.
You have the following requirements:

- Web publishers must be able to update web pages from a SharePoint site collection that is only accessible on the Company1 internal network.
- Web page updates must be published on an automated basis to a SharePoint site collection that is accessible from the Internet.

You need to configure the website.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Configure content type publishing

Create a content deployment job

Configure content sources

Create source and destination site collections

Create a content deployment path

Create publishing content types

Answer:

Explanation:

Actions

Configure content type publishing

Create a content deployment job

Configure content sources

Create source and destination site collections

Create a content deployment path

Create publishing content types

Create source and destination site collections

Create a content deployment path

Create a content deployment job

NEW QUESTION 82

You are the administrator for a SharePoint 2016 farm. You configure an App Catalog and a SharePoint Store.

Users report that they get an error when they try to add an app to their sites.
 You need to allow users to add apps from the SharePoint Store and ensure that all previously requested apps are added.
 For each requirement, what should you do?

Requirement	Action
Investigate the issue with adding errors	<div> <div>▼</div> <div> Configure SharePoint Store settings to allow end users to purchase apps Enable installation of apps that require accessible Internet-facing endpoints Set and enable the URL for the SharePoint app store </div> </div>
Install all apps requested by user	<div> <div>▼</div> <div> Purchase additional app licenses Approve user app requests that originate from the App Catalog Add apps that cannot be installed to a Monitored Apps list and analyze installation errors Collect the required apps list from users and add them manually </div> </div>

Answer:

Explanation:

Requirement	Action
Investigate the issue with adding errors	<div> <div>▼</div> <div> Configure SharePoint Store settings to allow end users to purchase apps Enable installation of apps that require accessible Internet-facing endpoints Set and enable the URL for the SharePoint app store </div> </div>
Install all apps requested by user	<div> <div>▼</div> <div> Purchase additional app licenses Approve user app requests that originate from the App Catalog Add apps that cannot be installed to a Monitored Apps list and analyze installation errors Collect the required apps list from users and add them manually </div> </div>

NEW QUESTION 84

Your organization sells products online. You store all product information in a secure Microsoft SQL Server database. Members of the online marketing team only access the database by using an online website administration application. The organization's sales and product development teams do not have direct access to database. Single sign-on is enabled in the environment.
 You identify the following requirements for the sales and product development teams:
 You need to provide access to the product database while leveraging out-of-the box SharePoint functionality. Which actions should you perform in sequence? To answer, select the appropriate options in the answer area.

Answer Area

Step	Action
1	<div>▼</div> <div>Create a Secure Store target application that implements individual ticket mapping. Create a Secure Store target application that implements group mapping.</div>
2	<div>▼</div> <div>Create an external content type. Create a content type that is based on a Report Builder report.</div>
3	<div>▼</div> <div>Configure alternate access mappings. Configure Report Server. Create an external list.</div>

Answer:

Explanation:

Answer Area

Step	Action
1	<div>▼</div> <div>Create a Secure Store target application that implements individual ticket mapping. Create a Secure Store target application that implements group mapping.</div>
2	<div>▼</div> <div>Create an external content type. Create a content type that is based on a Report Builder report.</div>
3	<div>▼</div> <div>Configure alternate access mappings. Configure Report Server. Create an external list.</div>

NEW QUESTION 89

You are customizing standard content types for an organization. For the tracking of a department, you must allow users to easily select or enter a value. In some cases, users may refer to a single department by more than one name. Users must be able to select or type any name for a department but the document must be associated with only one department.

You need to create a column that supports the requirements. What should you do?

- A. Create a Choice site column that uses check boxes.
- B. Create a Choice site column that uses a drop-down menu.
- C. Create a Managed Metadata site column.
- D. Create a Choice list that uses a drop-down menu.

Answer: B

Explanation: <http://en.share-gate.com/blog/start-learn-sharepoint-advanced-column-types>

NEW QUESTION 91

Your development team deploys a new SharePoint Store app that interacts with the user by using an FRAME. When the user loads a SharePoint page, the IFRAME is empty.

You need to ensure that the SharePoint Store app loads properly.

How should you configure authentication and authorization for the app? To answer, select the appropriate option from each list in the answer area.

Authentication	Authorization
<div> <div>▼</div> <div> Self-signed certificate Microsoft Azure Active Directory Control </div> </div>	<div> <div>▼</div> <div> user permissions app and user permissions </div> </div>

Answer:

Explanation:

Authentication	Authorization
<div> <div>▼</div> <div> Self-signed certificate Microsoft Azure Active Directory Control </div> </div>	<div> <div>▼</div> <div> user permissions app and user permissions </div> </div>

NEW QUESTION 94

During the upgrade from SharePoint2013to SharePoint2016, you discover there is a missing feature. You review the logs and observe the following error message:

Message: Database [WSS_Contoso_OR01] has reference(s) to a missing feature: Id= [4be9a980-965f-486f-9eda-074e284875d7].

Remedy: The feature with Id 4be9a980-965f-486f-9eda-074e284875d7 is referenced in the database [WSS_Contoso_OR01], but is not installed on the current farm.

The missing feature may cause upgrade to fail. Please install any solution which contains the feature and restart upgrade if necessary.

You need to identify the page that is missing the feature. Which of the following will identify the page?

- A. On the SharePoint Server, run the following Windows PowerShellcommand:Test-SPContentDatabase-Narne SdbName-WebApplication \$wa| Select Category, Message |Where {\$_.Category-eq "MissingFeature"}
- B. On the SharePoint Server, run the following Windows PowerShellcommand:Test-SPContentDatabase-Name SdbName-WebApplication \$wa| Select Category, Message | Where{\$_.Category-eq "MissingSetupFile"}
- C. On the SQL Server, run the following SQL syntax against WSS_Contoso_OR01 :SELECT FeatureId, FullURL From WebsInner JOIN FeaturesOnWebs.Id=Features.WebIdWHEREFeatureId='4be9a980-965f-486f-9eda-074e284875d7'ORDERBYFeatur
- D. On the SharePoint Server, review the Health Analyzer and find the missing dependencies.

Answer: A

NEW QUESTION 98

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the SharePoint administrator for a company.

Users report that pages from the human resources (HR) division site are taking a long time to render. You need to troubleshoot the reasons for the page rendering issues.

You analyze the SharePoint health reports. Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 102

A company has an on-premises SharePoint farm. The company also uses SharePoint Online. Employees must be able to access on-premises sites and SharePoint Online resources.

You must use single sign-on (SSO). You need to configure authentication.

Which three options should you configure? Each correct answer presents part of the solution.

- A. Windows Azure directory synchronization without Password Sync
- B. server to server authentication
- C. Active Directory Federation Services 2.0 with SSO
- D. forward proxy configuration
- E. Windows Azure directory synchronization with Password Sync

Answer: CDE

NEW QUESTION 107

You are a SharePoint administrator for Contoso, Ltd. You manage an on-premises SharePoint environment. A user named User1 is the site collection administrator for the Human Resources (HR) site. User1 leaves the company and is replaced with a user named User2. Access requests for the HR SharePoint site are still being sent to User1. You need to ensure that User2 receives all access requests to the HR site. How should you complete the Windows PowerShell commands? To answer, select the appropriate Windows PowerShell segment from each list in the answer area.

\$obj=

Get-SPSite
Get-SPWeb
Get-SPSiteUrl

\$obj.RequestAccessEmail= "User2@contoso.com"

\$obj Update()
Set-SPSite
Set-SPWeb
Set-SPSiteURL
\$obj Close()

Answer:

Explanation:

\$obj=

Get-SPSite
Get-SPWeb
Get-SPSiteUrl

\$obj.RequestAccessEmail= "User2@contoso.com"

\$obj Update()
Set-SPSite
Set-SPWeb
Set-SPSiteURL
\$obj Close()

NEW QUESTION 110

You are the SharePoint administrator for Contoso, Ltd. You plan to use the contoso.com domain for the deployment of a new SharePoint environment. You need to deploy a SharePoint app to support ContosoApp1. How should you configure the URL for the SharePoint app? To answer, select the appropriate option from each list in the answer area.

Answer Area

http://

contoso.com

prefix-apphash.contosoapps.com

mysites.contoso.com

/

sites/web1/ContosoApp1

ContosoApp1

sites

Answer:

NEW QUESTION 113

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are the SharePoint administrator for a company. The SharePoint environment is causing excessive information to be recorded in the diagnostic logs. You need to configure the SharePoint farm to only write events to the Windows event log that are equal to or more severe than the Error level. You run the following Windows PowerShell command: Set-SPLogLevel –EventSeverity Error Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 118

You upgrade a company's SharePoint 2013 farm to SharePoint 2016. You are responsible for optimizing the performance of the SharePoint 2016 farm. You must improve page load performance and implement PerformancePoint in the farm. You need to deploy additional MinRole servers in the environment. For each requirement, which MinRole role should you implement? To answer, drag the appropriate MinRole role to the correct requirement. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

MinRole roles

Application

Search

SingleServer

Distributed Cache

Custom

Front-end web

NEW QUESTION 121

You are a SharePoint administrator for Contoso, Ltd. You manage a large SharePoint Server farm. You configure a single SharePoint Search application for the farm. The Search Service application has five crawl databases. All crawl databases have content. Contoso would like to crawl content from a partner company named WingTip Toys. This crawled content must be stored in a dedicated crawl database. You need to configure the environment. What should you do?

- A. Provision a new Search Server for the existing Search Service applicatio
- B. Add dedicated crawl components for WingTip Toys to the new Search Server.
- C. Create a dedicated Microsoft SQL Server instance for the WingTip crawl database.
- D. Add a crawl database to the existingSearch Service application.
- E. Provision a new Search Service applicatio
- F. Configure the Search Service application to crawl WingTip Toys content.

Answer: C

Explanation: Maximum crawl databases per Search Service application increased from 5 to 15 in SharePoint 2016. References:
[https://technet.microsoft.com/en-gb/library/cc262787\(v=office.16\).aspx](https://technet.microsoft.com/en-gb/library/cc262787(v=office.16).aspx)

NEW QUESTION 123

You have a SharePoint 2016 farm that has two Web front-end servers, two application servers, one SQL Server instance, and an Office Web Apps 2013 server. Business users create reports that contain links to files that are stored in different document libraries. You have a workflow that moves documents modified more than 30 days ago from any document libraries to a designated archive library. Users report that after documents are moved to the archive library, the links in the reports do not work. You need to ensure that the document links still work for archived documents when users open documents in Office Online. Which feature should you use?

- A. Managed Metadata navigation
- B. Durable Links
- C. Path-based redirects
- D. Document identifiers

Answer: B

NEW QUESTION 128

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the SharePoint administrator for a company.

Users report that pages from the human resources (HR) division site are taking a long time to render. You need to troubleshoot the reasons for the page rendering issues.

You monitor the SharePoint BLOB cache, the ASP.NET output cache, and the SharePoint object cache.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 131

You plan to install SharePoint Server 2016 in a new environment. You need to install the SharePoint Server prerequisite components. For each prerequisite installation method, which tool or command line utility should you use?

Install from a network share	<div> <div>▼</div> <div> Setup.exe PrerequisiteInstaller.exe SharePoint Products Configuration Wizard Microsoft SharePoint Products and Technologies 2016 Preparation Tool </div> </div>
Install from the Internet	<div> <div>▼</div> <div> Setup.exe PrerequisiteInstaller.exe SharePoint Products Configuration Wizard Microsoft SharePoint Products and Technologies 2016 Preparation Tool </div> </div>

Answer:

-URI
 -Confirm
 -Partition Mode
 -DefaultProxyGroup

NEW QUESTION 144

You are responsible for optimizing the SharePoint 2016 farm.

You need to improve the performance of Distributed Cache services. Which Windows PowerShell command should you run?

- A. Add-SPDistributedCacheServiceInstance
- B. Set-SPRequestManagementSettings -ThrottlingEnabled \$true
- C. Clear-SPDistributedCacheItem -ContainerType DistributedDefaultCache
- D. Update-SPDistributionCacheSize -CacheSizeInMB 16384

Answer: D

Explanation: References:

<https://docs.microsoft.com/en-us/powershell/module/sharepoint-server/Update-SPDistributedCacheSize?view=s>

NEW QUESTION 148

You have a SharePoint Online environment. You enable the Delve feature.

The human resources (HR) team is concerned that private, sensitive documents from the HR team site are appearing in Delve. You have created a HideFromDelve column in the library and the documents continue to appear in Delve. The column is a Yes/No type and every item in the library must have a value. You need to perform steps to configure Delve to show only specific documents and update existing items in the library with minimum effort.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Re-index the document library.	
Reset the crawl index.	
Do not specify a default value for the site column.	
Create a new crawl property named ows_HideFromDelve .	
Set the default value for the site column to No .	
Update the value of the HideFrom-Delve property for each item.	
Set the default value for the site column to Yes .	

Answer:

Explanation: References:
<http://www.learningsharepoint.com/2016/06/23/how-to-hide-documents-from-delve-office-365/>

NEW QUESTION 150

A college plans to enable personal sites for all users. All personal sites will be created in a dedicated web application. All staff, faculty members, and students have access to the same SharePoint environment. You need to ensure that only college staff and faculty members can create personal sites. What should you do?

- A. Manage user permissions for the User Profile service application.
- B. Define site app permissions for the intranet site collection.
- C. Manage organization subtypes for the User Profile service application.
- D. Define permission levels for the intranet collection.

Answer: A

Explanation: <https://technet.microsoft.com/en-us/library/ee721063.aspx>

NEW QUESTION 152

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the SharePoint administrator for a company.

You must provide an on-premises SharePoint solution that helps monitor and analyze your business in order to make informed business decisions that align with the objectives and strategies for the company. The solution must include the following features:

You install and configure PerformancePoint Services. Does the solution meet the goal?

- A. Yes
- B. No

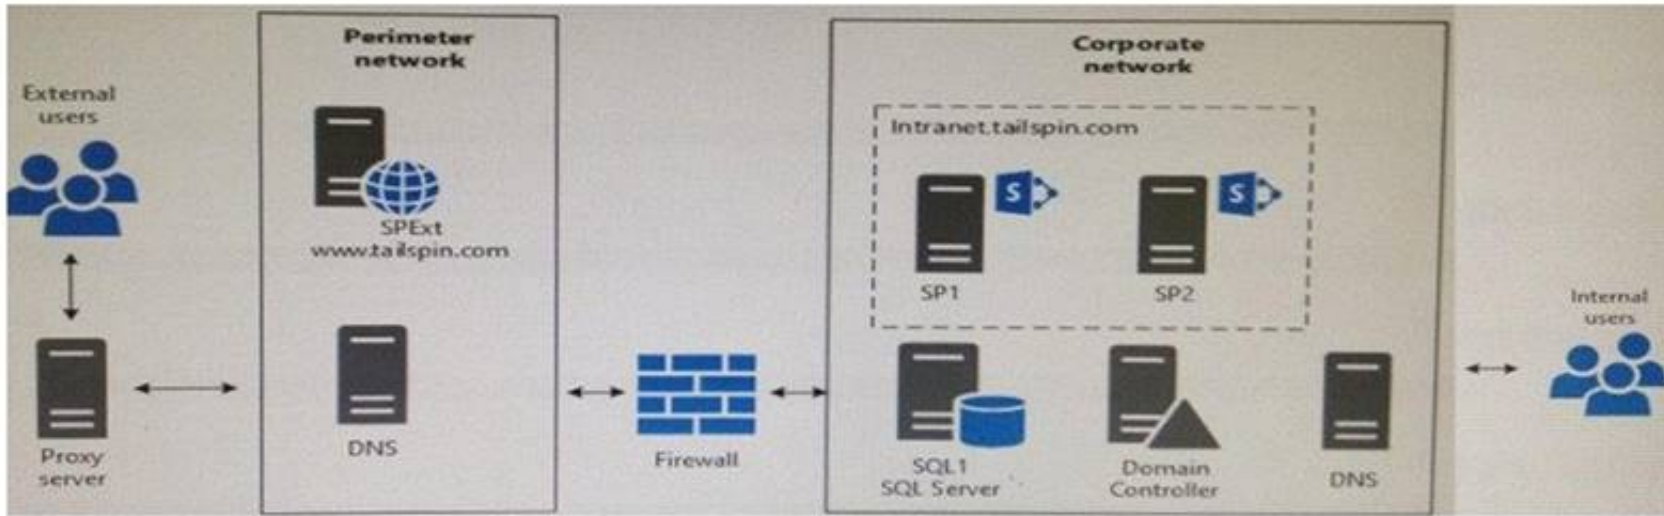

Answer: A

Explanation: Topic 2, Tailspin Toys
 Background

Tailspin Toys manufactures and sells toys and games. The company also resells board games. The new chief executive officer (CEO) recently launched an effort to update the company's information technology (IT) infrastructure. The CEO wants a blog site to provide updates in plain text about the progress of company projects and the overall health of the company to employees. Content from this site will be used to populate some content on the internet-facing site.

You hire a consultant to design and deploy a SharePoint farm. The company plans to use the farm to create internal collaboration sites, and e-commerce site, and a place to display public announcements.

The following diagram shows the topology of the SharePoint farm:

General

You must create a separate site collection for each department. You must base each site collection on the Team site template. The direct URL for each site collection must use the following format:

<http://departmentname.tailspin.com>.

You must place the site collections for all departments in the same web application, if possible. You must place the site collection for departments that have unique requirements in separate web applications.

Business continuity

You identify the following requirements related to continuity of the business:

- All SharePoint services must be highly available.
- The SharePoint environment must be able to withstand the failure of a single system without affecting accessibility.

You must monitor the SharePoint environment to ensure that systems are available and that response times meet service level agreements (SLAs). In the event the times are not within the required thresholds, the system must alert SharePoint administrators. You must create a site that allows department managers to view the performance data that has been collected. The use of additional monitoring software will be performed where it can be justified.

Governance and security

Governance requirements

- Marketing department employees may create team sites. All other sites must be created by members of the information technology (IT) administration staff.
- You must handle requests for new sites by using a Help Desk site on SharePoint
- The corporate taxonomy must be managed by the SharePoint administrative staff. Users must not be allowed to create their own information architecture. Exceptions to this requirement will be handled on a case by case basis.

- All information in SharePoint must be consistently identified and readily accessible by using searches. Search components must be configured to provide the best search results while minimizing administrative overhead.

Security requirements

Anonymous access is only permitted for Internet-facing sites. Authentication is required for all sites. Authentication must occur through the Active Directory Domain Services environment. All custom apps must be installed and managed by the SharePoint administrative staff. Any requests for new apps must be submitted through the Help Desk site.

Hardware and storage

Hardware requirements

You must minimize the number of servers and applications whenever possible. You must only deploy additional servers and applications if the requesting department manager provides the appropriate documentation to support the need.

File storage requirements

Content must not be stored in the perimeter network. All access to SharePoint content from the Internet must be handled through servers in the perimeter network. Human resources (HR) data must be kept separate from all other data.

HR department

The HR manager needs a website to implement time management and leave requests. The HR manager has found an app that will provide this functionality on a SharePoint independent software vendor website, and would prefer to use this app as opposed to creating a custom in-house app. This app will only need to access to data in the HR site collection.

You must create a site for the HR department that allows new employees to read required documents regarding policies and procedures. The site must also provide all employees access to other HR documentation such as the employee handbook, employee leave procedures, and acceptable use guides.

IT department

You must implement a Help Desk website and associated workflows. To create the site, you must access data from a Microsoft Excel workbook into a SQL Server database by using an SQL Server Integration Services (SSIS) package. You must access data from other data sources.

Employees must be able to fill out a help request on the site and then check the status of the request. The IT department staff must be able to respond to the requests, update the status of requests, and close requests. IT department managers must be able to track the status of requests, and generate reports on the progress of requests.

Marketing department

Collaboration sites

Marketing department employees must be able to create their own collaboration sites in SharePoint. The collaboration sites will be used for new product release discussions and marketing plans related to those new products. The URL for the collaboration sites must use the format: [/products/productname](#).

Custom terms

The marketing department must be able to use custom terms when identifying marketing strategies. Other departments must not be able to use custom terms. This requirement has been approved by management.

Public-facing sites

You must create a site for the marketing department that provides information to potential customers about the current product line and any products in development. The marketing team must be able to access this site by using their mobile devices.

Sales department

The sales manager needs a site to display sales progress data. The site must include KPIs and metrics that are generated by using information from a database stored on a SQL Server. Sales department employees are often away from the office. They must be able to access SharePoint data from external locations and when they are offline. Sales department employees need a site that customers can access to purchase products and check on the status of orders.

NEW QUESTION 157

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to monitor the environment.

You run the following Windows PowerShell cmdlet: `Set-SPLogLevel`

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 162

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.
You need to monitor the environment.
You configure System Center Operations Manager 2012 R2 with a web application monitor. Does the solution meet the goal?

- A. Yes.
- B. No.

Answer: A

NEW QUESTION 165

You need to monitor the environment.
You run the following Windows PowerShell cmdlet: Set-SPDiagnosticConfig
Does this solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 166

You need to implement the Managed Metadata Service (MMS) application for the websites.
For each website, which MMS configuration option should you use? To answer, select the appropriate option from each list in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Website	MMS configuration option
Marketing	<div><div></div><div>a new MMS term store</div><div>a new MMS term group</div><div>an open term set</div><div>a closed term set</div></div>
Sales	<div><div></div><div>a new MMS term store</div><div>a new MMS term group</div><div>an open term set</div><div>a closed term set</div></div>

Answer:

Explanation:

Answer Area

Website	MMS configuration option
Marketing	<div><div></div><div>a new MMS term store</div><div>a new MMS term group</div><div>an open term set</div><div>a closed term set</div></div>
Sales	<div><div></div><div>a new MMS term store</div><div>a new MMS term group</div><div>an open term set</div><div>a closed term set</div></div>

NEW QUESTION 167

You need to monitor the environment.
You create a performance data collector set. Does this solution meet the goal?

- A. Yes

B. No

Answer: A

NEW QUESTION 170

You need to deploy the HR app.

Which options should you recommend? To answer, select the appropriate setting from each list in the answer area.

Deployment component	Option
Method	<div><div></div><div>The site owner must add the app from a list of available apps for the site. The site owner must add the app from the App Catalog. The SharePoint administrator must add the app from the SharePoint Store The SharePoint administrator must install the app by using Windows PowerShell.</div></div>
App permission request scope	<div><div></div><div>SPSite SPWeb SPList Tenancy</div></div>

Answer:

Explanation:

Deployment component	Option
Method	<div><div></div><div>The site owner must add the app from a list of available apps for the site. The site owner must add the app from the App Catalog. The SharePoint administrator must add the app from the SharePoint Store The SharePoint administrator must install the app by using Windows PowerShell.</div></div>
App permission request scope	<div><div></div><div>SPSite SPWeb SPList Tenancy</div></div>

NEW QUESTION 171

You need to configure the web application that will support the marketing department collaboration sites. What should you implement?

- A. an alternate access mapping for each productname value
- B. a wildcard inclusion managed path
- C. an explicit inclusion managed path
- D. a new web application for each productname value

Answer: B

NEW QUESTION 172

You need to deploy the web application to support the marketing department.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create a teams managed path for the web application.

Enable Self-Service Site Creation for all departmental web applications.

Enable Self-Service Site Creation for the marketing department web application.

Create a products managed path for the web application.

Enable anonymous access for the web application.

Create a web application for all departments.

Create a web application for the marketing department.

Answer Area

>

<

⤴

⤵

Answer:

Explanation:

Actions

Create a teams managed path for the web application.

Enable Self-Service Site Creation for all departmental web applications.

Enable Self-Service Site Creation for the marketing department web application.

Create a products managed path for the web application.

Enable anonymous access for the web application.

Create a web application for all departments.

Create a web application for the marketing department.

Answer Area

Create a web application for the marketing department.

Create a products managed path for the web application.

Enable Self-Service Site Creation for the marketing department web application.

NEW QUESTION 176

You need to implement the site collection for the sales department. What should you do?

- A. In Central Administration, create a web application for the department site
- B. Then, create the sales site collection.
- C. Create a web application for the department site
- D. Then, run the following Windows PowerShell commands: New-SPWebApplication –Name “Tailspin Toys Departments” –Port 80 –Host Headerdepartments.tailspin.com –URL “http://departments.tailspin.com”-ApplicationPool “TailspinAppPool”New-SPSite ‘http://sales.tailspin.com’–HostHeaderWebApplication‘http://departments.tailspin.com’ – Name ‘Sales’ -Description ‘Sales Department Site’-OwnerAlias ‘tailspin\administrator’-Language 1033 -Template ‘STS#0’
- E. In Central Administration, create a web application for sales departmen
- F. Then, run the following Windows PowerShell commands: New-SPSite ‘http://sales.tailspin.com’–HostHeaderWebApplication‘http://Sales.tailspin.com’ – Name ‘Sales’ -Description ‘Sales Department Site’-OwnerAlias ‘tailspin\administrator’-Language 1033 -Template ‘STS#0’

Passing Certification Exams Made Easy

visit - <https://www.surepassexam.com>

G. In Central Administration, create a web application for the sales department sites and enable Self-Service Site Creation.
H. Then, run the following Windows PowerShell commands: New-SPSite 'http://sales.tailspin.com' -HostHeaderWebApplication'http://Sales.tailspin.com' -Name 'Sales'-Description 'Sales Department Site'-OwnerAlias 'tailspin\administrator'-Language 1033 -Template 'STS#0'

Answer: C

NEW QUESTION 181

You need to implement the Sales Progress website. Which service application should you create and configure?

- A. a Business Data Connectivity Service application
- B. an Application Management Service application
- C. the Access Service 2010 service application
- D. the PerformancePoint Service application

Answer: D

Explanation: Topic 3, Contoso LTDBackground

Contoso, Ltd. is a manufacturing company that serves the oil and gas industry. The company produces materials and chemicals that are used in the production of gasoline. Contoso has recently acquired several smaller companies including A. Datum, Litware, Inc., and Northwind Traders. Contoso has now grown from a local company to a company that has offices in multiple geographies.

The company has the following offices:

Function	Secondary function	Name	Location	Number of employees	Content size in terabytes (TB)
Corporate HQ	IT	Contoso	Dallas	500	8 TB
Finance and Acquisitions	IT	A. Datum Corporation	London	100	4 TB
Manufacturing	Trading, Finance	Litware Inc.	Beijing	50	1 TB
Trading	Finance	Northwind Traders	New York	25	2 TB
Field Employees		N/A	Various locations worldwide	100	

Corporate structure

Contoso is divided into business units based on their function primarily, and then by geographic region. The corporate language is English. Contoso has a major datacenter that is located near their Dallas facilities. A. Datum Corporation has a contract with a third-party datacenter in London, England. Contoso intends to move their environment fully to the cloud in the future, and will use SQL Databases in the cloud for business continuity.

Contoso has, up until recently, handled all collaboration between employees using a single file share, email, USB flash drives, and local storage. With a growing need for global cooperation and collaboration, Contoso has elected to implement a SharePoint environment. You must minimize the cost for the solution.

SharePoint environment

- Each businessfunctionalgroup requires a unique site collection. You must create child site collections for each geographical region that is part of the business functional group.
- The SharePoint taxonomy must follow the corporate structure.
- All existing corporate content must be migrated to the new SharePoint 2016 environment.
- The SharePoint environment must be accessible to all employees 24 hours a day, 7 days a week, and 365 days a year.

Data

- You must retain all records for compliance reasons.
- You must share sales data by using Microsoft Excel. The sales data must be available online.
- The Beijing office must be able to share information to external partners.

Employee requirements

- Employees must only use SharePoint Designer to edit SharePoint pages.
- Employees must be able to edit Excel workbooks in a browser.
- Employees must have access to PowerPivot.

Editing of SharePoint pages

Contoso has decided that they will allow employees to edit SharePoint 2016 pages only by using SharePoint Designer. Employees must edit pages in a development environment that is located in Dallas. Changes must be applied to the production environment by using a backup/restore operation on the individual site collection. The development environment is an exact replica of the production environment.

Technical requirements SharePoint requirements

You identify the following requirements for the SharePoint environment:

Backup and disaster recovery

- The environment must be backed up at all times. You must not permit the loss of more than one hour of data.
- In the event of a disaster, the SharePoint environment must remain accessible to all employees. All disaster response and recovery plans and protocols will be available from the corporate SharePoint instance. The maximum acceptable downtime for the environment is four hours.
- In the case of failure, you must be able to restore the environment to any point within three weeks before the failure.

SharePoint farm

- You must ensure that specific offices can share content with external partners.
- You must log activities related to PowerPivot in the SharePoint usage logs.
- You must implement Search services from the on-premises farm.

Deployment guidelines

You have the following guidelines and protocols for implementing the SharePoint environment:

- You must install and configure all servers in an identical way.

- You must provision all site collections by using the SPSite.Copy method at the content database level. You must use reproducible and traceable methods to provision sites.
- You must track information about SharePoint installations in Active Directory Domain Services.
- You must specify different service accounts for each service application.
- Users in the Dallas test environment must be able to create content databases on demand.

Planned environments

You plan to implement the following environments:

Datacenter	Environment	Function	Authorization
Dallas	SharePoint2016 On-premises	Primary site	All employees
Dallas	SharePoint2016 On-premises	Test environment	IT employees
Dallas	SharePoint2016 On-premises	Development environment	Dev employees, IT employees
Denver	SharePoint Online	Test environment for Office 365	IT employees
London	SharePoint2016 On-premises	High availability and failover	All employees
Hong Kong	SharePoint Online	Collaboration for China, Trading, and Finance	All employees in China, Trading, and Finance

Groups and accounts

You must create the following groups:

Account name:	Service application/role
IT admins	Monitor SharePoint 2016 and perform user administration tasks.
SharePoint installation	Install and configure SharePoint 2016
SQL admins	Administer SQL Server and provision SQL Server databases.

You must create the following service accounts:

Account name:	Service application/role
Network service	Office Online Services
SharePoint farm	Farm administrator
SQL admin	SQL Server Service account

Monitoring and management

You must implement monitoring for the following aspects of the SharePoint solution:

- SecurityYou must be notified if administrator accounts are used to run application pools or if the server farm account is used for other services.
 - PerformanceYou must monitor database index fragmentation and whether the paging file size is sufficient.
 - AvailabilityYou must monitor free space on drives and receive an alert if a drive is running out of space. You must also be notified if one or more servers are not responding.
 - SharePoint page performanceYou must monitor the manufacturing, trading, and finance instances in Beijing for the any performance issues. You must also log attempts to connect to the instances from locations outside of the corporate network.
 - Connectivity between Office 365 and the on-premises SharePoint 2016 environment You must monitor connectivity between the two environments.
- Contoso is concerned that unauthorized users may gain access to sensitive information. You must log any attempts to access sensitive information. The company is especially interested in the logging the following actions:
- attempts to open documents that contain personal information

- editing sensitive documents
- printing sensitive documents

NEW QUESTION 186

You need to define the content database architecture. What should you create?

- A. a content database for each site collection based on business function
- B. a content database based on geography for each site collection
- C. a single content database for the entire environment
- D. a content database for each business function, with site collections based on geography

Answer: B

NEW QUESTION 189

You need to create a new farm. What should you do?

- A. Run the following Windows PowerShell cmdlet: New-SPCentralAdministration
- B. Run Setup and then run the SharePoint Configuration Wizard.
- C. Run the following Windows PowerShell cmdlet: Connect-SPConfigurationDatabase
- D. Run the following Windows PowerShell cmdlet: New- SPConfigurationDatabase

Answer: B

NEW QUESTION 191

You need to ensure that users can edit SharePoint pages. What should you do?

- A. Run the following PowerShell command: \$webAppObj = Get-SPWebApplication –Identity [URL]\$webAppObj.AllowDesigner = \$true\$webAppObj.Update()
- B. Enable SMTP connection encryption.
- C. In the System Settings section of Central Administration, convert the server role to Custom.
- D. Run the following PowerShell cmdlet: Set-SPO365LinkSettings

Answer: A

NEW QUESTION 192

You need to monitor the resources for the Beijing office.

Which three components should you implement? Each correct answer presents part of the solution.

- A. search
- B. proxy settings
- C. Distributed Cache
- D. SAML authentication
- E. claims authentication

Answer: BDE

NEW QUESTION 197

How should you complete the Windows PowerShell command? To answer, select the appropriate Windows PowerShell segment from each list in the answer area.

Answer area

▼

Restore-SPSite
Restore-SPFarm
Backup-SPSite
Restore-SPDeletedSite

▼

-Directory
-Identity

Answer:

Explanation: **Answer area**

▼

Restore-SPSite
Restore-SPFarm
Backup-SPSite
Restore-SPDeletedSite

▼

-Directory
-Identity

NEW QUESTION 198

You need to update the production environment with pages that employees update.
 How should you complete the Windows PowerShell command? To answer, select the appropriate Windows PowerShell segment from each list in the answer area.

<input type="text"/>	<input type="text"/>
Restore-SPSite	-Directory
Restore-SPFarm	-Identity
Backup-SPSite	
Restore-SPDeletedSite	

Answer:

Explanation:

<input type="text"/>	<input type="text"/>
Restore-SPSite	-Directory
Restore-SPFarm	-Identity
Backup-SPSite	
Restore-SPDeletedSite	

NEW QUESTION 203

You need to select the backup solution for Contoso. Which solution should you use?

- A. premium tier Azure backup
- B. Basic tier Azure backup
- C. an on-premises backup solution
- D. Standard tier Azure backup

Answer: C

Explanation: Topic 4, Blue Yonder Airlines

Background

General

Blue Yonder Airlines manufactures, sells, and services small commercial jet aircraft. The company has offices worldwide. Blue Yonder currently uses both SharePoint2013 and SharePoint 2016. The company has a public website that is based on an ASP. NET web application.

Service environment (SharePoint 2013)

- The legacy SharePoint 2013 farm runs SharePoint Server 2013.
- This farm has over 200 site collections that are hosted on 20 content databases. There is no clear documentation that details which site collections are located in which content databases.
- The SQL Server for the SharePoint 2013 is ServerRole2013.

Requirements File metadata

Every file stored within the system must contain the following common document properties:

- Document Status
- Department
- Author
- Enterprise Keywords

Values for the Document Status property must be displayed in English, Spanish, or French. The display language must be based on a user's language preferences.

Additional fields or settings may be added in the future.

You must be able to manage file metadata settings from a single location. When you make changes to settings, the changes must be applied to site collections and existing documents. This location must not be a part of the existing marketing, HR, or procurement team sites.

Site collections

Each departmental site must have a separate site collection. All departmental sites must be hosted in a single web application which is located at <http://sp.bluevonder.com>.

Locations for the storage of personal documents for each employee should be created in a dedicated web application.

Governance

No custom development is permitted. Custom solutions must not be installed on the farm. Only configurations based on standard functionality are acceptable. Employees in the marketing, HR, and procurement departments are only permitted to have Read, Contribute, or Edit permissions to their sites.

Human resources

The human resources (HR) department is responsible for sharing information with all employees related to four themes: my work, my benefits, and my career. The naming of these themes may change overtime, and additional themes maybe added. It must be possible for someone from the HR team to edit the themes.

The HR site on the intranet is divided into a top level site with three subsites. Each subsite represents a unique team.

The global navigation of the HRsite must feature a listing of the relevant themes and link to custom pages that list content for each theme. The site must not display links to subsites or other pages on the HR site.

Team site URL

The HR site must use the URL <http://hrbluevonder.com>

Marketing

The marketing department will use SharePoinitto publish brochures, marketing materials, and announcements. Only final versions of these documents maybe added to the marketing team site for sharing with other Blue Yonder employees. Once a file is published, employees must be able to access the file by using a consistent link even if the file is renamed or moved within the site.

User file storage

Files that are in draft mode must not be accessible to any user except the author until the file is ready for review. Each marketing employee must have a single location for storing draft work, work in progress materials, and other personal files. Files stored in this location must only be accessible to the employee that owns the area unless the employee chooses to share a file with other users.

The storage location must be created automatically for an employee and must not require assistance from IT for configuration.

The URL for each employees' site must be <http://employees.bluevonder.com/mv/personal/username>. where username represents the login of the employee.

Public website

The public website is not part of the SharePoint environment. It is a standalone ASP.NET website. Content on the public website, including news and job postings, is updated once a month. Information posted to the public website must be accessible by using search. Information stored in the Downloads section of the website must not be crawled due to the large size and the number of files.

Team site URL

The team site for The department must use the URL, <http://marketina.bluevonder.com>.

Procurement

The procurement department uses SharePoint to store contracts and related documents. You must store these documents in a few document libraries as possible. The documents may contain precedents or terms that are relevant for reuse. The procurement site stores over 20 million documents. The term store for the site contains two million terms.

File storage

Currently, the site consumes approximately 100 gigabytes (GB) of storage. This is expected to double within a year. It is expected that search will be a key feature for this group.

Search

When a search is conducted and a user hovers over the search result, the user must be able to easily launch the document, visit the library that is stored in, or preview the file. The links to the document and the library must appear above the preview of the file.

Team site URL

The site for the department must use the URL <http://procurement.bluevonder.com>

Products

The product team uses the legacy SharePoint 2013 farm. You must upgrade the farm to SharePoint Server 2016 so that the product team can take advantage of all the services that are available to the other departments.

The existing products site is very active. You must ensure that users cannot change the site content during the upgrade process.

SharePoint 2016 Logical architecture

- The SharePoint environment has two web applications. One web application is used for Departmental Collaboration, and the other is used for Central Administration.
- Each departmental site should be configured as a separate site collection.
- All departmental sites should be hosted within the same web application. The web application is accessible at the URL <http://sp.bluevonder.com>
- Locations for the storage of personal documents for each employee should be created in a dedicated web application.

Server environment

- The server farm is configured with SharePoint Server 2016 and Office Online Server. No additional addons or software packages are installed.
- The SQL Server for the SharePoint 2016 farm is ServerRole2016.
- The farm should leverage MinRole with a dedicated server for search.

NEW QUESTION 205

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to display the values for the Document Status and Department properties. You configure variations on the site.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation: The requirement is to change the values of metadata field settings from a single location and changes to the settings should be applied to all the site collections and existing documents. So Term Set and Managed Metadata column is the preferred way to implement the Document Status and Department properties.

NEW QUESTION 209

You need to migrate the product team site.

What should you do? To answer, drag the appropriate actions to the step. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Actions

Run the Windows PowerShell cmdlet **Get-SPContentDatabase**.

Run the Windows PowerShell cmdlet **Export-SPWeb**.

Run the Windows PowerShell cmdlet **Backup-SPFarm**.

Set the value of the Database Read-Only property to **True**.

Create a Full Read user policy for the web application.

On ServerRole2016, run the Windows PowerShell cmdlet **New-SPContentDatabase**.

Answer area

Step

Action

1 Copy the URL of product team site.

2

Action

3 Connect to ServerRole2013.

4

Action

5 Backup the content database.

6 Restore and attach database to ServerRole2016.

Answer:

Explanation:

Actions

Run the Windows PowerShell cmdlet **Get-SPContentDatabase**.

Run the Windows PowerShell cmdlet **Export-SPWeb**.

Run the Windows PowerShell cmdlet **Backup-SPFarm**.

Set the value of the Database Read-Only property to **True**.

Create a Full Read user policy for the web application.

On ServerRole2016, run the Windows PowerShell cmdlet **New-SPContentDatabase**.

Answer area

Step

Action

1 Copy the URL of product team site.

2

Run the Windows PowerShell cmdlet **Get-SPContentDatabase**.

3 Connect to ServerRole2013.

4

Set the value of the Database Read-Only property to **True**.

5 Backup the content database.

6 Restore and attach database to ServerRole2016.

NEW QUESTION 212

You need to configure SharePoint to support the required common document properties. Which two actions should you perform? Each correct answer presents part of the solution.

- A. Activate the Metadata Navigation and Filtering feature.
- B. In each site collection, define content types and site columns.
- C. Create a site collection
- D. Define content types and site columns.
- E. Activate the Content Type Syndication Hub feature.
- F. Create a library
- G. Create columns and save the library as a template.

Answer: CD

Explanation: The requirement is to manage the field settings from a single place. For that, content type hub should be implemented. From scenario: Every file stored within the system must contain the following common document properties:

Document Status
 Department
 Author

Enterprise Keywords

You must be able to manage file metadata settings from a single location. When you make changes to settings, the changes must be applied to site collections and existing documents. This location must not be a part of the existing marketing, HR, or procurement team sites.

NEW QUESTION 215

You need to complete the configuration of the Search2016 farm.
How should you complete the Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NEW QUESTION 216

You need to configure SharePoint Server URLs to allow access to the following sites:
For each site, which feature should you configure? To answer, drag the appropriate feature to the correct site. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Passing Certification Exams Made Easy

visit - <https://www.surepassexam.com>

Answer:

Explanation: As per the requirements of Case Study, HR, Marketing Team and Procurement should have a dedicated URLs for them. Hence they should be implemented as Host Header site collection. For Marketing employees, it'll be a personal site and they should be able to publish the content on Marketing team site which can be done using content deployment path.
Scenario: Each departmental site must have a separate site collection.

NEW QUESTION 217

You need to ensure that employees can access published marketing materials. Which feature should you configure?

- A. Promoted Links
- B. Permission levels
- C. Managed paths
- D. Durable Links

Answer: D

NEW QUESTION 221

You need to configure the HR site.
For each requirement, which action should you perform? To answer, drag the appropriate action to the correct requirement. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Actions		Answer area	
		Requirement	Action
Set site navigation to Structured .		Manage a central list of themes.	Action
Set site navigation to Managed .		Allow HR team members to edit themes.	Action
Add themes as links in navigation settings.		Display themes as global navigation links.	Action
Add themes as terms in the Term store.	● ● ● ●		
Add themes as items in a custom list.			
Grant HR team members Contribute access for the themes custom list.			
Set HR team members as contributors for the themes term set.			

Answer:

Explanation:

Actions		Answer area	
		Requirement	Action
Set site navigation to Structured .		Manage a central list of themes.	Add themes as terms in the Term store.
Set site navigation to Managed .		Allow HR team members to edit themes.	Set HR team members as contributors for the themes term set.
Add themes as links in navigation settings.		Display themes as global navigation links.	Set site navigation to Managed .
Add themes as terms in the Term store.	● ● ● ●		
Add themes as items in a custom list.			
Grant HR team members Contribute access for the themes custom list.			
Set HR team members as contributors for the themes term set.			

NEW QUESTION 224

You need to configure search for the marketing public website. What should you create?

- A. a Content type
- B. a SharePoint Site content source
- C. a Web Sites content source
- D. an Enterprise Search Center

Answer: C

Explanation: From scenario:

The public website is not part of the SharePoint environment. It is a standalone ASP.NET website. Content on the public website, including news and job postings, is updated once a month. Information posted to the public website must be accessible by using search. Information stored in the Downloads section of the website must not be crawled due to the large size and the number of files.

NEW QUESTION 228

You need to design a logical architecture for the procurement team site. You create multiple content databases for the site collection. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 230

You need to configure search for the marketing public website. What should you create?

- A. a Result source
- B. a SharePoint Site content source
- C. a Crawl rule
- D. a Basic Search Center

Answer: A

Explanation: From scenario:

The public website is not part of the SharePoint environment. It is a standalone ASP.NET website. Content on the public website, including news and job postings, is updated once a month. Information posted to the public website must be accessible by using search. Information stored in the Downloads section of the website must not be crawled due to the large size and the number of files.

NEW QUESTION 235

The marketing team requires a location for the storage of their draft files. You need to configure the system to support their requirements. What should you do? To answer, select the appropriate action from each list in the answer area.

Step

Action

1

▼
Create a new web application
Create a new site collection based on the My Site Host template
Create a new site collection based on My Site template
Configure My Site settings
Configure personalization settings on web application
Configure permissions policy on web application

2

Configure Self-Service Site Creation.

3

▼
Create a new web application
Create a new site collection based on the My Site Host template
Create a new site collection based on My Site template
Configure My Site settings
Configure personalization settings on web application
Configure permissions policy on web application

4

Configure web application user policy.

5

▼
Create a new web application
Create a new site collection based on the My Site Host template
Create a new site collection based on My Site template
Configure My Site settings
Configure personalization settings on web application
Configure permissions policy on web application

Answer:

Explanation: References:

<http://www.sharepointdiary.com/2016/12/configure-my-sites-in-sharepoint-2016-step-by-step.html>

NEW QUESTION 240

You are planning the hybrid environment for OneDrive for Business.

You need to determine what the end-user experience will be for Dallas and Seattle SharePoint users.

What should you conclude? To answer, select the appropriate end-user experience from each list in the answer area.

End-users

OneDrive for Business Location

Dallas on-premises SharePoint users

▼

On-premises
Office 365

Seattle on-premises SharePoint users

▼

On-premises
Office 365

Dallas Office 365 SharePoint users

▼

On-premises
Office 365

Seattle Office 365 SharePoint users

▼

On-premises
Office 365

Answer:

Explanation: Box 1: On-premises
You must configure the Dallas SharePoint farm as a hybrid environment with the Office 365 tenant. Box 2: Office 365
Seattle: You must implement a new SharePoint environment. Box 3: Office 365
You must configure the Dallas SharePoint farm as a hybrid environment with the Office 365 tenant. Box 4: Office 365
Seattle: You must implement a new SharePoint environment.

NEW QUESTION 245

You need to upgrade the SharePoint 2013 corporate farm.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Upgrade the site collections.

Change the Denver farm databases to read only and then back up the Denver databases.

Change the Boston farm databases to read only and then back up the Boston databases.

Create a new SharePoint 2016 farm and copy over the Denver databases from backups.

Create a new SharePoint 2016 farm and copy over the Boston databases from backups.

Attach the upgrade the databases.

Answer:

Explanation: Scenario: Boston. You must upgrade the existing SharePoint farm to SharePoint 2016. Employees who use the farm must be able to continue using the farm during the upgrade process.

To upgrade from Microsoft SharePoint Server 2013 with the March 2013 Cumulative Update to SharePoint Server 2016, you use the database-attach method. In the database-attach method, you first create and configure a SharePoint Server 2016 farm. Then you copy the content and service application databases from the SharePoint Server 2013 with the March 2013 Cumulative Update farm, and then attach and upgrade the databases. This upgrades the data to the new version. Site owners can then upgrade individual site collections.

References: <https://docs.microsoft.com/en-us/sharepoint/upgrade-and-update/overview-of-the-upgrade-process>

NEW QUESTION 247

You need to ensure that sales department users can create sites.

You

grant sales department users permissions to create personal sites in the <http://Dallas.contoso.com/personal> site collection.

Does the solution meet the goal?

A. Yes

B. No

Answer: A

NEW QUESTION 252

You need to ensure that sales department users can create sites.
You grant sales department users the Full Control permission for the `http://Dallas.contoso.com/sites/Sales` site. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation: Wrong URL. Sales users must be able to create child sites under the `http://customer.contoso.com` web application.

NEW QUESTION 256

You need to configure the hybrid SharePoint environments.
In the table below, identify the features that you must deploy to each environment.
NOTE: Make only one selection in each column. Each correct selection is worth one point.

SharePoint environment features	Dallas	Seattle
Hybrid site features	<input type="radio"/>	<input type="radio"/>
Hybrid OneDrive for Business	<input type="radio"/>	<input type="radio"/>
Cloud hybrid search	<input type="radio"/>	<input type="radio"/>
Deploy Microsoft Identity Management Server	<input type="radio"/>	<input type="radio"/>
Deploy Azure Active Directory Connect	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation: Dallas: You must support OneDrive for Business, Site following, Profiles, and the Extensible app launcher (= Hybrid Site Features)
Seattle: You must support only OneDrive for Business and Profiles (= Hybrid OneDrive for Business).

NEW QUESTION 261

You need to configure hybrid OneDrive for Business permissions for sales users.
How should you configure the environment? To answer, select the appropriate option from each list in the answer area.
NOTE: Each correct selection is worth one point.

Farm

Dallas.contoso.com
 Chicago.contoso.com

Action

enable
 disable

Permission 1

Create personal site
 Create Subsites

Permission 2

Follow People and Edit Profile
 Browse Directories

Answer:

Explanation: Scenario:

You must support only OneDrive for Business and Profiles.

Requirements for sales department employees

Sales users must be able to create child sites under the <http://customer.contoso.com> web application.

Sales users must be able to create site collections.

NEW QUESTION 265

You need to upgrade the SharePoint farm for warehouse users. Which Windows PowerShell cmdlet should you run first?

- A. Mount-SPContentDatabase
- B. Test-SPContentDatabase
- C. Convert-SPWebApplication
- D. Test-SPSite

Answer: A

Explanation: Scenario: Boston: You must upgrade the existing SharePoint farm to SharePoint 2016. Employees who use the farm must be able to continue using the farm during the upgrade process.

The Mount-SPContentDatabase cmdlet attaches an existing content database to the farm. If the database being mounted requires an upgrade, this cmdlet will cause the database to be upgraded.

The default behavior of this cmdlet causes an upgrade of the schema of the database and initiates upgraded builds for all site collections within the specified content database if required. To prevent initiation of upgraded builds of site collections, use the NoB2BSiteUpgrade parameter. This cmdlet does not trigger version-to-version upgrade of any site collections.

NEW QUESTION 267

You need to implement the server environment for Seattle.

Where should you deploy the server roles? To answer, drag the appropriate server or servers to the correct roles. Each server or set of servers may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Server or Servers

Answer area

Server or Servers	Role	Server or servers
Server1 only	Front-end	Server or Servers
Server3 only	Application	Server or Servers
Server1 and Server5	Distribution Cache	Server or Servers

Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions

2nd - Questions and Answers in PDF Format

70-339 Practice Exam Features:

- * 70-339 Questions and Answers Updated Frequently
- * 70-339 Practice Questions Verified by Expert Senior Certified Staff
- * 70-339 Most Realistic Questions that Guarantee you a Pass on Your First Try
- * 70-339 Practice Test Questions in Multiple Choice Formats and Updates for 1 Year

100% Actual & Verified — Instant Download, Please Click
[Order The 70-339 Practice Test Here](#)
