

Microsoft

Exam Questions 70-346

Managing Office 365 Identities and Requirements

NEW QUESTION 1

- (Exam Topic 1)

Contoso, Ltd. plans to use Office 365 for email services and Skype for Business Online. Contoso has four unique domain names. You need to migrate domain names to Office 365.

Which two domain names should you exclude from the migration? Each correct answer presents part of the solution.

- A. contoso.us
- B. contoso
- C. contoso.local
- D. contoso.co

Answer: BC

Explanation:

There are no practical limits on the number of domains that can be verified to Office 365 Enterprise. The rules are simple: you need to verify a domain, and you need to assign the domain based on the needs (or Domain Intent). Domain Intent is what the domain services will be configured as; there are three different types of services for Domain Intent.

A top-level domain (TLD) is the part of the domain name located to the right of the dot ("."). The most common TLDs are .com, .net, and .org. Some others are .biz, .info, and .ws. These common TLDs all have certain guidelines, but are generally available to any registrant, anywhere in the world.

B: contoso- single labeled domain / or also known as a second-level domain - not valid C: contoso.local - internal labeled domain - not valid

NEW QUESTION 2

- (Exam Topic 1)

You administer the Office 365 environment for a company that has offices around the world. All of the offices use the same Office 365 tenant.

You need to ensure that all users can access the services that are available in their regions. Which setting or service should you update?

- A. User location settings
- B. User licenses
- C. Service usage address
- D. Rights management

Answer: A

Explanation:

The User Location settings will allow you to set sign-in status and user locations for all the users that are on your network notwithstanding the physical location where they find themselves.

References:

<http://blogs.perficient.com/microsoft/2014/11/office-365-assign-licensing-user-location-via-active-directory/>

NEW QUESTION 3

- (Exam Topic 1)

Fabrikam has the Office 365 Enterprise E3 plan.

You must add the domain name fabrikam.com to the Office 365 tenant. You need to confirm ownership of the domain.

Which DNS record types should you use? To answer, drag the appropriate DNS record type to the correct location or locations in the answer area. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Verification Method	DNS Record Type
Preferred	<input type="text"/>
Alternate	<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.

MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

NEW QUESTION 4

- (Exam Topic 1)

Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must to manage Office 365 delegation for the company.

You need to ensure that User1 can assign administrative roles to other users. What should you do?

- A. Create an Office 365 tenant and assign User1 the password administrator role.
- B. Use a password administrator account to assign the role to User1.
- C. Use a user management administrator account to assign the role to User1.
- D. Create an Office 365 tenant and assign User1 the global administrator role.

Answer: D

Explanation:

The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).

References:

<https://support.office.com/client/Assigning-admin-roles-eac4d046-1afd-4f1a-85fc-8219c79e1504>

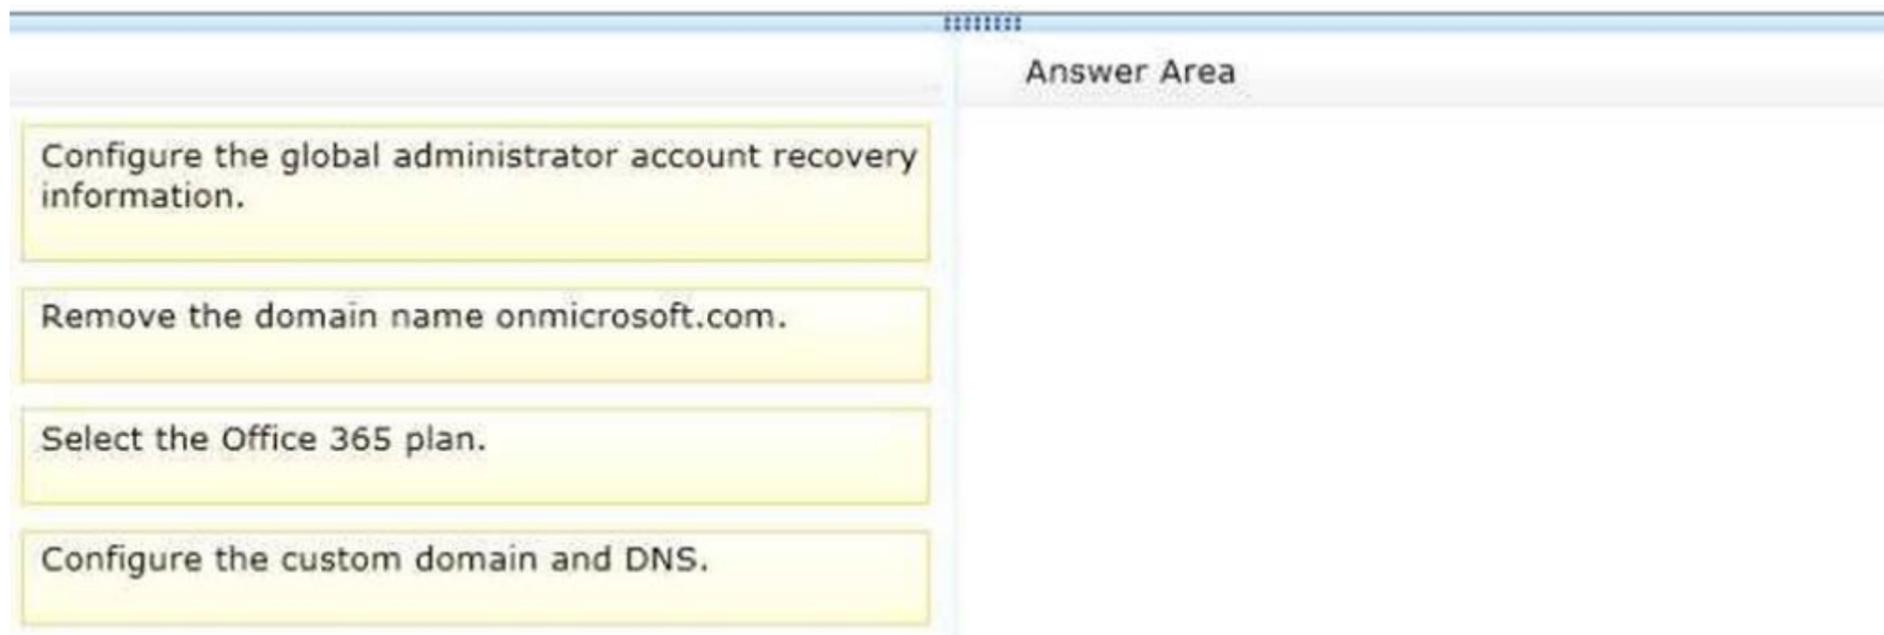

NEW QUESTION 5

- (Exam Topic 1)

A company plans to implement an Office 365 environment to manage email. All user accounts must be configured to use only a custom domain.

You need to provision an Office 365 tenant for the company.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows an exam interface. On the left, there is a list of four actions in yellow boxes: "Configure the global administrator account recovery information.", "Remove the domain name onmicrosoft.com.", "Select the Office 365 plan.", and "Configure the custom domain and DNS.". On the right, there is a grey box labeled "Answer Area".

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The tenant is your Office 365 account, including hosted Exchange, Skype for Business, SharePoint, and your Office 365 Active Directory. The first account that you create when you first purchase Office 365 is the "owner" of your tenant. This account should be an admin account, not a person. This account does not normally require an Office 365 license. Relating to SharePoint, all of your site collections are within your tenant. You can have any number of domains within your tenant (with e-mail accounts), but you will have only one root SharePoint URL: <https://xxx.sharepoint.com>.

The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).

When setting up Office 365 the first step is to purchase your subscription which includes choosing the plan. Step 2 involves the selection of the sign-on method and this is where the global administrator account is of consequence. Step 3 involves the collecting of information such as domain names and DNS, locations, etc... Step 4 is the actual migration plan and schedule, step 5 – the Microsoft account and organizational account, step 6 – the SkyDrive and SkyDrive Pro, and step 7 – the Windows Intune section.

Thus you should perform step 1 through 3 to ensure that all user accounts to make use of a custom domain for their e-mail.

References:

Katzer, Matthew and Don Crawford, Office 365 Migrating and Managing your Business in the Cloud, Apress Media, New York, 2013, pp 87- 93, 373

<http://office.microsoft.com/en-gb/office365-suite-help/add-your-domain-to-office-365-HA102818660.aspx>

NEW QUESTION 6

- (Exam Topic 2)

You are the Office 365 administrator for your company.

You need to ensure that trusted applications can decrypt rights-protected content.

Which four Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Microsoft Azure Rights Management (previously known as Windows Azure Active Directory Rights Management). To be able to decrypt rights protected documents you need to make sure that Microsoft Azure Rights Management is set up. Also you will need to enable a SuperUser account because The Active Directory Rights Management Services (AD RMS) super users group is a special group that has full control over all rights-protected content managed by the cluster. Its members are granted full owner rights in all use licenses that are issued by the AD RMS cluster on which the super users group is configured. This means that members of this group can decrypt any rights-protected content file and remove rights-protection from it.

The super users group is not enabled and is not assigned a group by default. This can be done by running the appropriate commands in sequence which are:

References:
<https://technet.microsoft.com/en-us/library/dn569291.aspx> <https://technet.microsoft.com/en-us/library/dn151475%28v=exchg.150%29.aspx>

NEW QUESTION 7

- (Exam Topic 2)

Your company has an Office 365 subscription. You create a new retention policy that contains several retention tags. A user named Test5 has a client computer that runs Microsoft Office Outlook 2007. You install Microsoft Outlook 2010 on the client computer of Test5. Test5 reports that the new retention tags are unavailable from Outlook 2010.

You verify that other users can use the new retention tags. You need to ensure that the new retention tags are available to Test5 from Outlook 2010. What should you do?

- A. Instruct Test5 to repair the Outlook profile.
- B. Modify the retention policy tags.
- C. Run the Set-Mailbox cmdlet.
- D. Force directory synchronization.

Answer: A

Explanation:

When deploying retention policies it is part of the procedure to create the tags and add it to the retention policies prior to the deployment. Also part of the procedure is to determine which Microsoft Outlook client versions are in use. In this case the Test5version has been changed and Test5 will then have to repair his/her Outlook profile accordingly.

NEW QUESTION 8

- (Exam Topic 2)

A company plans to deploy an Office 365 tenant. You have the following requirements:

- ▶ Administrators must be able to access the Office 365 admin center.
- ▶ Microsoft Exchange Online must be used as a Simple Mail Transfer Protocol (SMTP) relay for a line-of-business application that sends email messages to remote domains.
- ▶ All users must be able to use the audio and video capabilities in Microsoft Skype for Business. You need to configure the ports for the firewall.

Which port should you use for each application? Select the correct answer from each list in the answer area.

Answer Area

Applications	Port or ports
SMTP relay	<input type="text"/> TCP 25 TCP 443 TCP 587
Office 365 admin center	<input type="text"/> TCP 80 TCP 443 TCP 10106
Skype (outbound video sessions)	<input type="text"/> RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059
Skype (outbound audio sessions)	<input type="text"/> RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol (UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable.

TCP port 25 is used for simple mail transfer protocol which is used to e-mail routing between mail servers. TCP port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions. RTP/UDP port 50020-50039 must be used for outbound video sessions. RTP/UDP port 50000-50019 must be used for outbound audio sessions.

NEW QUESTION 9

- (Exam Topic 2)

You are the SharePoint Online administrator for Contoso, Ltd. The company purchases an Office 365 Enterprise E1 plan. The public-facing website must use SharePoint Online and the custom domain contoso.com. You need to configure the DNS settings for the public-facing SharePoint site.

How should you configure the DNS settings? Select the appropriate options from each list in the answer area.

Answer Area

Record	Hostname	Points To Address
<input type="text"/>	<input type="text"/>	<input type="text"/>

Answer Area

Record	Hostname	Points To Address
<input type="text"/> A CNAME MX SRV	<input type="text"/> www.contoso.com contoso-public.office.com contoso-public.onmicrosoft.com contoso-public.sharepoint.com	<input type="text"/> www.contoso.com contoso-public.office.com contoso-public.onmicrosoft.com contoso-public.sharepoint.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The CNAME record is used to redirect one domain to another in the DNS system. When a name server looks up a domain and finds that it has a CNAME record, the server replaces the first domain name with the CNAME, and then looks up the new name.

NEW QUESTION 10

- (Exam Topic 2)

Your company has a subscription to Office 365 for midsize business and enterprises. The company uses Microsoft Skype for Business Online. You need to open ports on the network firewall to enable all of the features of Skype for Business Online. Which port or ports should you open? (Each correct answer presents part of the solution. Choose all that apply.)

- A. inbound TCP443
- B. outbound TCP 5061
- C. outbound UDP 3478
- D. outbound TCP 443
- E. outbound UDP 50000 to outbound UDP 59999
- F. inbound TCP 8080

Answer: ACDE

Explanation:

A: inbound TCP 443 is the port for the Skype for Business for Business client service.
 C: outbound UDP 3478 is the UDP port for Skype for Business audio and video sessions.
 D: outbound TCP 443 is the port for the Skype for Business data sharing sessions as well as the Video and Audio and application sharing sessions.
 E: outbound UDP 50000 to outbound UDP 59999 is the port for Skype for Business audio and video sessions. References:
<https://adam-hand.com/cloud-technologies/firewall-ports-for-office-365/>

NEW QUESTION 10

- (Exam Topic 2)

A company deploys an Office 365 tenant. You must provide an administrator with the ability to manage company information in Office 365. You need to assign permissions to the administrator by following the principle of least privilege. Which role should you assign?

- A. Global administrator
- B. Service administrator
- C. Billing administrator
- D. User management administrator

Answer: A

Explanation:

Global admin: Has access to all administrative features. Global admins are the only admins who can assign other admin roles. You can have more than one global admin in your organization. The person who signs up to purchase Office 365 becomes a global admin. Only the global administrator role will allow you to manage company information by means of editing the organization profile. None of the other roles are enabled to manage organization information. References:
<https://support.office.com/en-US/Article/Assigning-admin-roles-eac4d046-1afd-4f1a-85fc-8219c79e1504>

NEW QUESTION 11

- (Exam Topic 2)

You create an Office 365 tenant. You assign administrative roles to other users. You hire a new user named User2.

User2 must NOT be able to change passwords for other users. You need to assign an administrative role to User2. Which role should you assign?

- A. Service administrator
- B. Global administrator
- C. Delegate administrator
- D. Password administrator

Answer: A

Explanation:

Being the Service Administrator will allow User2 to manage service requests and monitor service health, while not allowing User2 to have the ability to change passwords for other users.

NEW QUESTION 16

- (Exam Topic 2)

An organization plans to deploy Exchange Online. You must support all Exchange Online features. You need to create the required DNS entries. Which two DNS entries should you create? Each correct answer presents part of the solution.

- A. A
- B. SRV
- C. MX
- D. CNAME

Answer: CD

Explanation:

C: The MX record is used to send incoming mail for your domain to the Exchange Online service in Office 365.

D: The CNAME record is used to help Outlook clients to easily connect to the Exchange Online service by using the Autodiscover service. Autodiscover automatically finds the correct Exchange Server host and configures Outlook for users.

NEW QUESTION 18

- (Exam Topic 2)

You implement Office 365 for an organization.

You must create the correct DNS entries needed to configure Exchange Online.

Which DNS entries should you create? To answer, drag the appropriate DNS record type to the correct purpose. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

	Purpose	DNS Record Type
A	Helps prevent outbound email messages from being flagged as spam	<input type="text"/>
CNAME	Configures email message routing	<input type="text"/>
MX	Outlook autodiscover record is used to help users easily configure their desktop clients	<input type="text"/>
SRV		
TXT		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.

MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

CNAME (alias or canonical) record redirects one domain to another in the DNS system. When a name server looks up a domain and finds that it has a CNAME record, the server replaces the first domain name with the CNAME, and then looks up the new name.

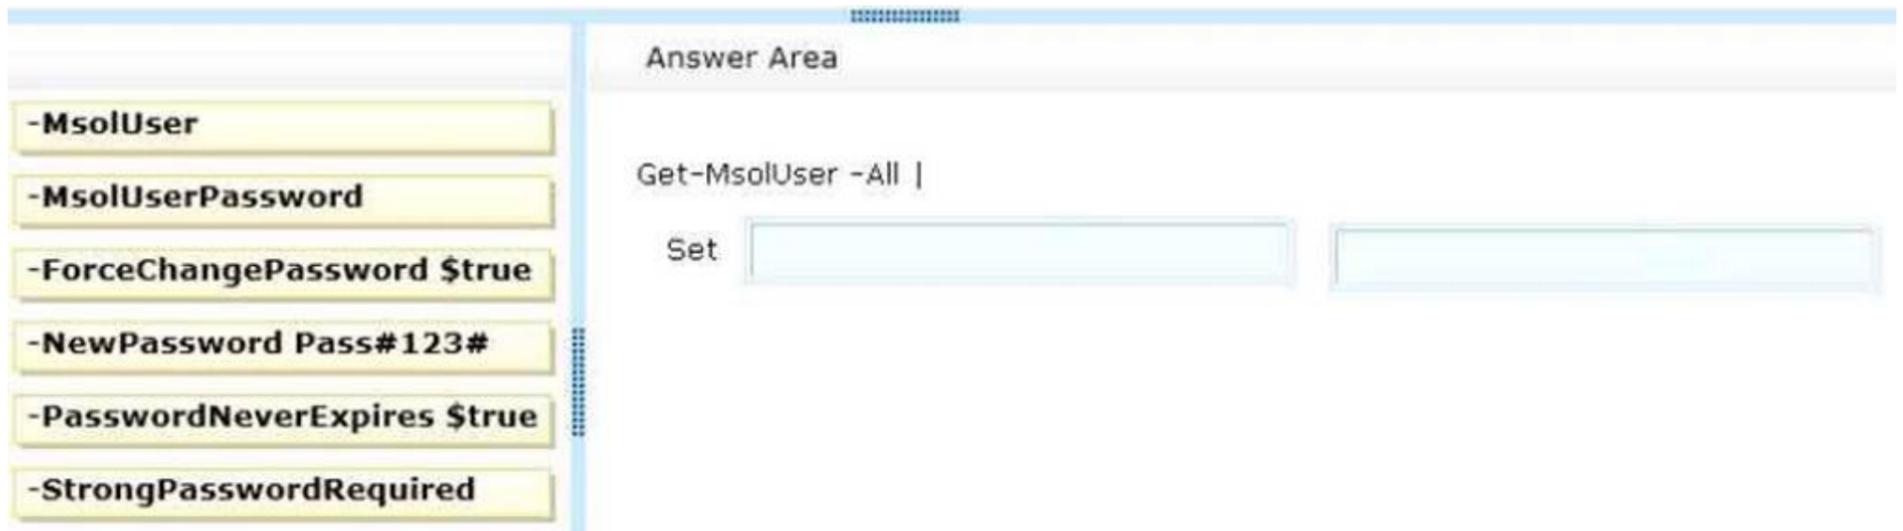

NEW QUESTION 23

- (Exam Topic 3)

You are the Office 365 administrator for your company. Your company uses Office 365 for collaboration. You must reset the password for all of the employees in your company.

You need to ensure that all employees create a new password the next time they sign in to Office 365.

How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: -MsolUserPassword

The Set-MsolUserPassword cmdlet is used to change the password of a user. Box 2: -NewPassword Pass#123#
 The Set-MsolUserPassword -NewPassword <string> sets the new password for the user.

NEW QUESTION 25

- (Exam Topic 3)

A company migrates to Office 365. 2,000 active users have valid Office 365 licenses assigned.

An additional 5,000 user accounts were created during the migration and testing processes. These users do not have any licenses assigned.

You need to remove the Office 365 user accounts that do not have any licenses assigned by using the least amount of administrative effort.

Which Windows PowerShell command should you run?

- A. Get-MsolUser -All-EnabledFilter "DisabledOnly" | Remove-MsolUser -Force
- B. Get-MsolUser-EnabledFilter "DisabledOnly" | Remove-MsolUser -Force
- C. Get-MsolUser -All -UnlicensedUsersOnly | Remove-MsolUser -Force
- D. Get-MsolUser -UnlicensedUsersOnly | Remove-MsolUser-Force

Answer: C

Explanation:

Step 1: Get all unlicensed users:

The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users. We must use both the -All and the -UnlicensedUsersOnly parameters to retrieve all unlicensed users.

Parameters include:

- ▶ All [<SwitchParameter>] If present, then all results will be returned.
- ▶ UnlicensedUsersOnly [<SwitchParameter>] The filter for only users who are not assigned a license. Step 2: Remove these users through the Remove-MsolUser -Force command.

NEW QUESTION 28

- (Exam Topic 3)

You are the Office 365 administrator for your company.

Users report that their passwords expire too frequently, and they do not receive adequate notice of password expiration.

Account passwords must remain active for the longest duration allowed. Users must receive password expiration notifications as early as possible.

You need to configure the password expiration policy.

How should you set the policy on the password page of the Office 365 admin center? To answer, drag the appropriate duration to the correct location. Each duration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The maximum number of days you can set the 'Days before password expire' to is 730. This will make the password valid for the longest duration.

To be notified as early as possible on that the password is about to expire, we should set the maximum value, which is 30, to the 'days before users are notified that their password will expire' setting.

Note: Set a user's password expiration policy References:

<https://support.office.com/en-us/article/Set-a-users-password-expiration-policy-0f54736f-eb22-414c-8273-498a>

NEW QUESTION 31

- (Exam Topic 3)

A company has 50 employees that use Office 365.

You need to enforce password complexity requirements for all accounts.

How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

We use Get -MsolUser to get all users. We then enforce strong password complexity to each of these users through StrongPassWordRequired parameter of the Set -MsolUser command. The output of get command is used in the set command through the concatenating function (the symbol |).

Box 1: -MsolUser

The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users. An individual user will be retrieved if the ObjectId or UserPrincipalName parameter is used. Box 2: MsolUser

The Set-MsolUser cmdlet is used to update a user object. This cmdlet should be used for basic properties only. Parameter: -StrongPasswordRequired <Boolean> Sets whether or not the user requires a strong password.

NEW QUESTION 35

- (Exam Topic 3)

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on-premises solutions. You are configuring the Windows Azure Active Directory Sync tool.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users. What should you do?

- A. Use the Office 365 admin center to import the file.
- B. Create a Windows PowerShell script to import account data from the file into Active Directory.
- C. Use the Windows Azure Management Portal to import the file.
- D. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

Answer: B

Explanation:

To force a sync with the Windows Azure Active Directory Sync tool:

- ▶ Open Powershell (as admin)
- ▶ Type Import-Module DirSync
- ▶ Then Type Start-OnlineCoExistenceSync

To simplify further you can write the commands as a PowerShell script.

NEW QUESTION 36

- (Exam Topic 3)

Your company has a hybrid deployment of Office 365. You need to create a group. The group must have the following characteristics:

- ▶ Group properties are synchronized automatically.
- ▶ Group members have the ability to control which users can send email messages to the group. What should you do?

- A. Create a distribution group and configure the Mail Flow Settings.
- B. Create a dynamic distribution group.
- C. Create a new role group.
- D. Create a distribution group and configure the Membership Approval settings.

Answer: C

Explanation:

The member of the role group can all do administrative tasks. When you create a role group you can select between the following three roles:

- ▶ Application Impersonation
- ▶ Distribution Groups
- ▶ Mail Recipients. References:

<https://blogs.perficient.com/microsoft/2015/04/office-365-allowing-users-to-edit-exchange-groups-they-manage>

NEW QUESTION 40

- (Exam Topic 3)

You are the Office 365 administrator for your company. The company has Office 365 Enterprise E3 licenses for each of its 250 employees. The company does not allow email or Skype for Business Online licenses to be assigned to external contractors.

User1 is an external contractor who requires access to SharePoint and Office Web Apps only. You need to add a license for User1's account.

What should you do? To answer, drag the appropriate action to the correct location or locations. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area	
Step	Action
1.	Sign in to the Office 365 admin center.
2.	<input type="text"/>
3.	Add an Office Web App with SharePoint (Plan 1) plan.
4.	<input type="text"/>
5.	Assign licenses to User1.

Select the purchase services option.

Select the licensing option.

Select the users and groups option.

Enable External Users in SharePoint.

Add an Office 365 Enterprise E3 license for User1.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step	Action
1.	Sign in to the Office 365 admin center.
2.	Select the purchase services option.
3.	Add an Office Web App with SharePoint (Plan 1) plan.
4.	Select the users and groups option.
5.	Assign licenses to User1.

NEW QUESTION 44

- (Exam Topic 3)

A company deploys an Office 365 tenant.

You prepare to use the bulk add tool to add users to Office 365. You need to prepare a file to use with the bulk add tool.

Which fields must you include in the file? Select the correct answer from each list in the answer area. NOTE: Each correct selection is worth one point.

Field	Required?
User Name	<input type="checkbox"/>
Display Name	<input type="checkbox"/>
First Name	<input type="checkbox"/>
Last Name	<input type="checkbox"/>
Job Title	<input type="checkbox"/>

Field	Required?
User Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Display Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
First Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Last Name	<input type="checkbox"/> Yes <input type="checkbox"/> No
Job Title	<input type="checkbox"/> Yes <input type="checkbox"/> No

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

How to add multiple users with bulk import in Office 365 Only the user name and display name are required entries.

The bulk import feature of Office 365 allows you to import multiple users' information into Office 365 from a single file source. The file must be a comma-separated values (CSV) file and adhere to the required format. It will then automatically do the rest of the thing for you. Only the user name and display name are required entries in the CSV file.

NEW QUESTION 47

- (Exam Topic 3)

You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to cloud-based services. You enable multi-factor authentication.

Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

You need to configure the environment. What should you do?

- A. Disable AD FS multi-factor authentication.
- B. Configure an IP blacklist for the main office location.
- C. Disable the AD FS proxy.
- D. Configure an IP whitelist for the main office location.

Answer: D

Explanation:

With ADFS you now get the option to whitelist an IP for multi-factor authentication (MFA).

For example, if you enable multi-factor authentication. Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

References:

<https://msdn.microsoft.com/en-us/library/azure/dn807156.aspx>

NEW QUESTION 52

- (Exam Topic 3)

Your company uses Office 365. You need to identify which users do NOT have a Microsoft Exchange Online license assigned to their user account.

Which Windows PowerShell cmdlet should you use?

- A. Get-ManagementRoleAssignment
- B. Get-User
- C. Get-RoleGroupMember
- D. Get-LogonStatistics
- E. Get-RemovedMailbox
- F. Get-MSOLContact
- G. Get-Recipient
- H. Get-Mailbox
- I. Get-Group
- J. Get-MailboxStatistics
- K. Get-MSOLUser
- L. Get-MailContact

Answer: K

Explanation:

We use the Get-MsolUser -UnlicensedUsersOnly command to retrieve all users which do not have a Microsoft Exchange Online license.

The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users.

The -UnlicensedUsersOnly [<SwitchParameter>] parameter filters for only users who are not assigned a license.

NEW QUESTION 56

- (Exam Topic 3)

Fabrikam Inc. plans to use the domain fabrikam.com for Office 365 user identities, email addresses, Session Initiation Protocol (SIP) addresses, and a public-facing home page.

Single sign-on (SSO) between Office 365 and the on-premises Active Directory is NOT required. You need to configure the Office 365 plan.

Which four Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer Area

Update-MsolFederatedDomain

Set-MsolDomain

Get-MsolDomainVerificationDns

New-MsolDomain

Get-MsolDomainFederationSettings

Confirm-MsolDomain

New-MsolFederatedDomain

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box1. First we need to add the domain.

The New-MsolDomain cmdlet is used to create a new domain object. This cmdlet can be used to create a domain with managed or federated identities.

Box2. Next we need to check the DNS before the domain can be confirmed.

The Get-MsolDomainVerificationDns cmdlet is used to return the DNS records that need to be set to verify a domain.

Box3. Now we can confirm the domain.

The Confirm-MsolDomain cmdlet is used to confirm ownership of a domain. In order to confirm ownership, a custom TXT or MX DNS record must be added for the domain. The domain must first be added using the New-MsolDomain cmdlet (step 1), and then the Get-MsolDomainVerificationDNS cmdlet (step 2) should be called to retrieve the details of the DNS record that must be set.

Box4. Next we can set fabrikam.com as the default domain.

The Set-MsolDomain cmdlet is used to update settings for a domain. This cmdlet can be used to change the default domain setting for the company.

NEW QUESTION 59

- (Exam Topic 3)

A company uses Office 365 services. You implement the Windows Azure Active Directory Sync tool in the local environment.

An employee moves to a new department. All Office 365 services must display the new department information for the employee.

You need to update the employee's user account.

Where should you change the value of the department attribute for the employee?

- A. The Active Directory management page in the Windows Azure Management Portal
- B. The Users and groups page in the Office 365 admin center
- C. The on-premises Active Directory
- D. The Metaverse Designer

Answer: C

Explanation:

The Active Directory Synchronization allows you to sync your Active Directory Objects such as users and groups to your Office 365 account. This is a one-way synchronization, which means you continue to manage users On-Premises, and your changes will appear on Office 365 SharePoint. So if you want to change the user information of employee you must use the On-Premises Active Directory.

NEW QUESTION 61

- (Exam Topic 3)

Litware Inc. has an Office 365 Enterprise E1 plan. Employees have access to all Office 365 services. Employees in the human resources (HR) department must continue to use the on-premises SharePoint 2013 deployment due to legal requirements.

You need to disable access to SharePoint Online for all HR department employees.

How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- MsolUser
- MsolUserRole
- MSOnline
- MsolService
- MsolSubscription
- MsolUserLicense
- MsolLicenseOptions
- SHAREPOINTWAC
- SHAREPOINTSTANDARD

```

Import-Module MSOnline
$cred = Get-Credential
Connect-MsolService -cred $cred
$license = New 
    -AccountSkuId "litware:STANDARDPACK"
    -DisabledPlans 
Get  -All -Department "HR" |
Set  -LicenseOptions $license
    
```

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: -MsolLicenseOptions
 We must create license object. The New-MsolLicenseOptions cmdlet creates a new License Options object. Box 2: SHAREPOINTSTANDARD
 We must disable SharePoint Online. SharePoint Online is denoted by SHAREPOINTSTANDARD.
 The New-MsolLicenseOptions-DisabledPlans <string[]> produces a list of service plans to disable when assigning this license to the user.
 Box 3: We get all HR department users through the Get -MsolUser -All -Department "HR" command. The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users.
 Box 4: For these retrieved users we use the Set-MsolUserLicense command to apply the license we constructed.
 The Set-MsolUserLicense cmdlet can be used to adjust the licenses for a user.

NEW QUESTION 65

- (Exam Topic 3)
 Your company subscribes to an Office 365 Plan E3. A user named User1 installs Office Professional Plus for Office 365 on a client computer. From the Microsoft Online Services portal, you assign User1 an Office Professional Plus license. One month after installing Office, User1 can no longer save and edit Office documents on the client computer. User1 can open and view Office documents.
 You need to ensure that User1 can save and edit documents on the client computer by using office. What should you do?

- A. Install the Office Customization Tool.
- B. Reinstall Office Professional Plus.
- C. Install the Microsoft Online Services Sign-in Assistant.
- D. Upgrade the subscription to Plan E4.

Answer: C

Explanation:

Office 365 ProPlus is offered as a monthly subscription. The subscription for User1 has run out and the program has been deactivated. The user should choose Sign In to activate Office 365 ProPlus. This is done through the Microsoft Online Services Sign-in Assistant.
 References:
[http://technet.microsoft.com/en-us/library/gg702619\(v=office.15\).aspx](http://technet.microsoft.com/en-us/library/gg702619(v=office.15).aspx)

NEW QUESTION 68

- (Exam Topic 4)
 An organization plans to migrate to Office 365. You use the Windows Azure Active Directory (AD) Sync tool. Several users will not migrate to Office 365. You must exclude these users from synchronization. All users must continue to authenticate against the on-premises Active Directory.
 You need to synchronize the remaining users.
 Which three actions should you perform? Each correct answer presents part of the solution.

- A. Populate an attribute for each user account.
- B. Disable the user accounts in Active Directory.
- C. Perform a full synchronization.
- D. Configure the connection filter.
- E. Run the Windows PowerShell command Set-MsolDirSyncEnabled -EnableDirSync \$false.

Answer: ACD

Explanation:

To implement user attribute-based Directory synchronization filtering you need to add an attribute to each user object that is to be filtered in your on-premises Active Directory. Then you need to enable Active Directory synchronization filtering and configure the connection filter to use the user attribute. Finally, you must perform a full synchronization.

NEW QUESTION 70

- (Exam Topic 4)

An organization purchases an Office 365 plan for 10,000 user accounts. You have a domain controller that runs Windows Server 2008 R2. The forest functional level is set to Windows Server 2000.

The organization must be able to synchronize user attributes from the on-premises Active Directory Domain Services environment to Office 365.

You need to prepare to install the Azure AD Connect

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Upgrade the domain controller to Windows Server 2012.
- B. Install Microsoft .NET Framework 3.5SP1 and Microsoft .NET Framework 4.0.
- C. Install Windows Server 2012 Standard edition.
- D. Raise the forest functional level to Windows Server 2008 R2.
- E. Join a workstation to an Active Directory domain.

Answer: BD

Explanation:

B: The directory synchronization computer must run the Microsoft .NET Framework 3.5 SP1 and the Microsoft .NET Framework 4.0 or higher.

D: The minimum forest functional level requirement for Office 356 is Windows Server 2003. We must therefore raise the forest functional level.

NEW QUESTION 75

- (Exam Topic 4)

You are the Office 365 administrator for your company. The company synchronizes the local Active Directory objects with a central identity management system. The environment has the following characteristics:

- ▶ Each department has its own organizational unit (OU).
- ▶ The company has OU hierarchies for partner user accounts.
- ▶ All user accounts are maintained by the identity management system. You need to ensure that partner accounts are NOT synchronized with Office 365.

What should you do?

- A. Configure OU-based filtering by using Azure Active Directory Connect (Azure AD Connect).
- B. In the Azure Active Directory portal, configure OU-based filtering.
- C. Configure user attribute-based filtering by using Azure Active Directory Connect (Azure AD Connect).
- D. In the Azure Active Directory portal, configure user attribute-based filtering.

Answer: A

Explanation:

You can use Azure AD Connect to enable Active Directory synchronization filtering. This allows you to filter out objects that should not be synchronized to the cloud. The objects that can be filtered are:

Organizational-units (OUs), domains, and user-attributes.

NEW QUESTION 80

- (Exam Topic 4)

An organization prepares to migrate to Office 365. The organization has one domain controller named NYC-DC1 and one server named NYC-DS that is designated as the directory synchronization computer.

The organization has the following servers:

Server	Operating System	Forest Function Level
NYC-DC1	Windows Server 2008 R2	Windows 2000
NYC-DS	Windows Server 2003	

You plan to upgrade the servers to support directory synchronization.

You must upgrade each server to meet only the minimum requirements by using the least amount of administrative effort.

You need to ensure that you can use the Azure AD Connect to synchronize the local Active Directory with Office 365.

What should you do? Select the correct action from each list in the answer area.

Server	Requirement
NYC-DC1	<div style="border: 1px solid black; padding: 5px;"> <div style="text-align: right; margin-bottom: 5px;">▼</div> <p>Raise the forest functional level to Windows Server 2003. Raise the forest functional level to Windows Server 2008. Raise the forest functional level to Windows Server 2008 R2. Install Windows Server 2012.</p> </div>
NYC-DS	<div style="border: 1px solid black; padding: 5px;"> <div style="text-align: right; margin-bottom: 5px;">▼</div> <p>Install the 64-bit version of Windows Server 2008 Standard edition. Install Windows Server 2008 R2 Standard edition. Install Windows Server 2008 R2 Datacenter edition. Install Windows Server 2012.</p> </div>

A. Mastered

B. Not Mastered

Answer: A

Explanation:

The minimum forest functional level requirement for Office356 is Windows Server 2003.

The minimum domain controller requirement for office 356 is 32-bit Windows Server 2003 Standard Edition with Service Pack 1 (SP1). From the available options, the minimum requirement is met by Windows Server 2008 R2 Standard Edition.

References:

<http://msdn.microsoft.com/en-us/library/azure/jj151831.aspx>

NEW QUESTION 84

- (Exam Topic 5)

A company deploys an Office 365 tenant. You install the Active Directory Federation Services (AD FS) server role on a server that runs Windows Server 2012. You install and configure the Federation Service Proxy role service. Users sign in by using the Security Assertion Markup Language (SAML) protocol.

You need to customize the sign-in pages for Office 365.

Which pages should you customize? To answer, drag the appropriate page to the correct customization. Each page may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Customization	ASP.NET Page
Change the list of trusted claims providers that are displayed	
Authenticate users	
Change the overall appearance of all pages	

A. Mastered

B. Not Mastered

Answer: A

Explanation:

The HomeRealmDiscovery.aspx page shows a drop-down list that contains the list of trusted claims providers configured for AD FS.

The IdpInitiatedSignOn.aspx page is used to handle SAML-based IdP-initiated single sign-on (SSO).

The MasterPage.master is a template for all .aspx pages and can be used to change the overall appearance of all pages.

NEW QUESTION 86

- (Exam Topic 5)

You are the Office 365 administrator for your company. You prepare to install Active Directory Federation Services (AD FS).

You need to open the correct port between the AD FS proxy server and the AD FS federation server. Which port should you open?

- A. TCP 80
- B. TCP 135
- C. TCP 389
- D. TCP 443
- E. TCP 636
- F. TCP 1723

Answer: D

Explanation:

Secure Sockets Layer (SSL) is used to secure communications between federation servers, clients, Web Application Proxy, and federation server proxy computers. HTTP over SSL (HTTPS) uses TCP port 443.

NEW QUESTION 88

- (Exam Topic 5)

A company has a Windows Server 2008 domain controller and a SharePoint 2007 farm. All servers on the network run Windows Server 2008.

You must provide single sign-on for Office 365 SharePoint sites from the company's network. You need to install the required software.

What should you install? To answer, drag the appropriate action to the correct location. Each answer may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

.NET Framework 3.5 with Service Pack 1

AD FS 2.0

Rollup 3 for AD FS 2.0

SharePoint Server 2013

SharePoint Server 2010 with Service Pack 1

Step	Action
1.	Install <input type="text"/>
2.	Install <input type="text"/>
3.	Install <input type="text"/>
4.	Configure trusts between environments
5.	Configure Active Directory synchronization

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Active Directory Federated Services (AD FS) is required to support single sign-on.

On a Windows Server 2008 computer AD FS can be installed as a separate installation package known as AD FS 2.0. The .NET Framework 3.5 with Service Pack 1 is a prerequisite for AD FS 2.0 software and is not automatically be installed by the AD FS 2.0Setup Wizard. We must therefore install the .NET Framework 3.5 with Service Pack 1 first.

Once .NET Framework 3.5 with Service Pack 1 is installed, we can run the AD FS 2.0 installation package. Once AD FS 2.0 is installed, we must install the AD FS hotfixes. The hotfixes are included in Update Rollup 3 for AD FS 2.0.

<https://technet.microsoft.com/en-us/library/dn151311.aspx>

<http://technet.microsoft.com/en-us/library/cc771145.aspx>

NEW QUESTION 92

- (Exam Topic 5)

A company named Fabrikam, Inc. is deploying an Office 365 tenant. You install Active Directory Federation Services (AD FS) on a server that runs Windows Server 2012.

The company's environment is described in the following table:

Description	Fully Qualified Domain Name
Cluster DNS Name	fs.fabrikam.com
Server node in cluster	server1.fabrikam.com
Server node in cluster	server2.fabrikam.com

You must obtain a certificate from a certification authority and install it on the federation servers. You need to specify the subject name for the certificate. Which name should you specify?

- A. fs.fabrikam.com
- B. server1.fabrikam.com
- C. fabrikam.com
- D. server2.fabrikam.com

Answer: A

Explanation:

The Subject Name for the certificate must match the names used for AD FS. The cluster DNS name must match the Federation Service name. As the cluster DNS name is fs.fabnkam.com, we are using it for AD FS, and we must use it in the subject name for the certificate.

References:

<http://blogs.technet.com/b/askds/archive/2012/01/05/understanding-the-ad-fs-2-0-proxy.aspx>

NEW QUESTION 93

- (Exam Topic 5)

An organization has over 10,000 users and uses a SQL-based Active Directory Federation Services (AD FS) 2.1 server farm.

You need to change the AD FS 2.0 service account password.

What should you do? Select the correct answer from each list in the answer area.

Step	Action
1.	Log on to each <input type="text"/>
2.	Modify the application pool identity by using the <input type="text"/>
3.	Modify the AD FS Windows Service Properties by using the <input type="text"/>

Step	Action
1.	Log on to each <input type="text"/> directory sync server federation proxy server federation server workstation
2.	Modify the application pool identity by using the <input type="text"/> AD FS management Internet Information Services (IIS) manager local security policy task scheduler
3.	Modify the AD FS Windows Service Properties by using the <input type="text"/> Office 365 admin center System Configuration Windows Services MMC snap-in

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

We must update the domain password for the AD FS 2.0 service account in Active Directory Domain Services (AD DS) and then update the AD FS AppPool and the AD FS service account on all federation servers in the federation server farm to mirror the new domain password.

The AD FS AppPool is configured through Internet Information Services (IIS) Manager.

The AD FS 2.0 Windows Service Properties is configured through the Windows Services snap-in. References:

<https://technet.microsoft.com/en-us/library/hh344806%28v=ws.10%29.aspx>

NEW QUESTION 95

- (Exam Topic 5)

You are the Office 365 administrator for your company.

You must configure a trust between the on-premises Active Directory domain and the Office 365 environment by using Active Directory Federation Services.

You need to assign the correct certificate to the description of your on-premises server environment below. Which certificate types should you assign? To answer, drag the appropriate certificate type to the correct test

description. Each certificate type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area	
Description	Certificate Type
Secures the communication between federation servers, clients, and federation server proxy computers.	<input type="text"/>
Securely signs all tokens that the federation server issues for the cloud-based services.	<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Certificates are used to secure communications between federation servers, Web Application Proxies, federation server proxies, the cloud service, and web clients.

A Secure Sockets Layer (SSL) certificate is used to secure communications between federation servers, clients, Web Application Proxy, and federation server proxy computers.

A Token-signing certificate is a standard X.509 certificate that is used to securely sign all tokens that the federation server issues and that the cloud service will accept and validate.

References:

<https://technet.microsoft.com/en-us/library/dn151311.aspx>

<http://blogs.technet.com/b/adfs/archive/2007/07/23/adfs-certificates-ssl-token-signing-and-client-authentication->

NEW QUESTION 100

- (Exam Topic 5)

Contoso Ltd. plans to use Office 365 services for collaboration between departments. Contoso has one Active Directory Domain Services domain named contoso.local. You deploy Azure AD Connect.

You plan to implement single sign-on (SSO) for Office 365.

You need to synchronize only the user accounts that have valid routable domain names and are members of specified departments.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
<p>Use user attribute-based filtering to exclude all users that have contoso.local in the userPrincipalName attribute.</p>	<div style="display: flex; align-items: center; justify-content: center;"> <div style="border-left: 1px solid gray; border-right: 1px solid gray; width: 20px; height: 100px; margin-right: 10px;"></div> <div style="display: flex; flex-direction: column; align-items: center; gap: 20px;"> <div style="border: 1px solid gray; width: 40px; height: 40px; border-radius: 50%; display: flex; align-items: center; justify-content: center;">➤</div> <div style="border: 1px solid gray; width: 40px; height: 40px; border-radius: 50%; display: flex; align-items: center; justify-content: center;">➤</div> </div> <div style="border: 1px solid gray; width: 40px; height: 40px; border-radius: 50%; display: flex; align-items: center; justify-content: center;">⬆</div> <div style="border: 1px solid gray; width: 40px; height: 40px; border-radius: 50%; display: flex; align-items: center; justify-content: center;">⬇</div> </div>
<p>Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all Contoso users.</p>	
<p>Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all users in the specified departments.</p>	
<p>Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Users and Computers MMC snap-in.</p>	
<p>Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Domain and Trusts MMC snap-in.</p>	
<p>Use domain-based filtering to exclude all users in the domain contoso.local.</p>	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The domain we want to federate must be registered as a public internet domain with a domain registrar or within our own public DNS servers. We cannot use contoso.local as it is not routable outside of the intranet. We can then use Active Directory Domains and Trusts to add user principal name (UPN) suffixes to the domain. The default UPN suffix is the Domain Name System (DNS) domain name of the contoso.local domain that contains the user account. We can add contoso.com as an alternative UPN suffixes for logon processes.

We should then use Active Directory Users and Computers to change the UPN of user accounts in the specified departments to contoso.com. Finally, we can use user attribute-based filtering to exclude all have non-routable domain names, i.e., those that have a contoso.local as their UPN suffix.

NEW QUESTION 101

- (Exam Topic 5)

Your company has an Office 365 subscription. You need to add the label "External" to the subject line of each email message received by your organization from an external sender.

What should you do?

- A. From the Exchange Control Panel, add a MailTip.
- B. From the Forefront Online Protection Administration Center, set the footer for outbound email.
- C. Run the Enable-InboxRule cmdlet.
- D. From the Exchange Control Panel, run the New Rule wizard.

Answer: D

Explanation:

Transport rules can apply messaging policies to email messages flowing through your organization. It can be used to prepend the subject of the message with a text label.

NEW QUESTION 103

- (Exam Topic 5)

A company deploys an Office 365 tenant.

You need to configure single sign-on (SSO) for all user accounts.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Run the Windows PowerShell cmdlet Convert-MsolDomainToStandard.
- B. Run the Windows PowerShell cmdlet Enable-ADFSEndpoint.
- C. Run the Windows PowerShell cmdlet Convert-MsolDomainToFederated.
- D. Deploy a federation server proxy.
- E. Run the Windows PowerShell cmdlet New-ADFSOrganization.
- F. Deploy a federation server farm.

Answer: CF

Explanation:

C: The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on (SSO).

F: Single sign-on (SSO) requires Active Directory Federation Services (AD FS) which can be installed as a federation farm.

References:

<http://technet.microsoft.com/en-us/library/dn194092.aspx>

NEW QUESTION 108

- (Exam Topic 5)

You are the Office 365 administrator for your company. You have a server that runs Windows Server 2012. You plan to install an Active Directory Federation Services (AD FS) proxy server.

You need to install and configure all of the required roles.

Which two roles should you install and configure? Each correct answer presents part of the solution.

- A. Web Server (IIS)
- B. AD FS
- C. Application Server
- D. Network Policy and Access Service
- E. Active Directory Certificate Services (AD CS)
- F. Remote Access

Answer: AB

Explanation:

The Active Directory Federation Services role and the Web Server Role (IIS) role are required for setting up an AD FS proxy server.

References:

<http://technet.microsoft.com/en-us/library/dd807096.aspx> <https://technet.microsoft.com/en-us/library/dd807080.aspx> <https://technet.microsoft.com/en-us/network/bb545879.aspx> <https://technet.microsoft.com/en-us/library/cc754521%28v=ws.10%29.aspx>
<https://mshiyas.wordpress.com/howto-ads-ads-proxy-on-windows-server-2012-r2-with-office-365/>

NEW QUESTION 111

- (Exam Topic 6)

An organization deploys an Office 365 tenant.

The Service health page displays the following information:

SERVICE	TODAY	NOV 13
Exchange Online		
Identity Service		
Lync Online		
Office 365 Portal		
Office Subscription		
Rights Management Service		
SharePoint Online		
Yammer Enterprise		

You need to report the status of service interruptions for Exchange Online and SharePoint Online. Use the drop-down menus to complete each statement based on the information presented in the screen shot. Each correct selection is worth one point.

Answer Area

What is the current status of Exchange Online and SharePoint Online?

When is the earliest date that a post-incident review will be available for SharePoint Online?

Answer Area

What is the current status of Exchange Online and SharePoint Online?
 SharePoint Online is available. Exchange Online is available, but service is degraded.
 SharePoint Online is available. Issues with the Exchange Online service are under investigation.
 The SharePoint Online subscription is expired. The Exchange Online subscription will expire soon.
 The SharePoint Online subscription is expired. Issues with the Exchange Online service are under investigation.

When is the earliest date that a post-incident review will be available for SharePoint Online?
 November 13
 November 21
 November 30
 December 1

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view. The following icons are used in the Service Health Page:
 Microsoft says that they will publish a post-incident review within five business days. Therefore, it is possible that a post-incident review could be issued today.
 References:
http://office.microsoft.com/en-in/office365-suite-help/view-the-status-of-your-services-HA102817837.aspx#_St <http://technet.microsoft.com/en-us/library/office-365-service-continuity.aspx>

NEW QUESTION 116

- (Exam Topic 6)

You are the Office 365 administrator for your company.

You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 8 to perform the management tasks.

You need to ensure that the Windows 8 computer has the necessary software installed. What should you install first?

- A. Microsoft Office 365 Best Practices Analyzer for Windows PowerShell
- B. Windows PowerShell 4.0
- C. Remote Server Administration Tools for Windows
- D. Microsoft Online Services Sign-in Assistant

Answer: D

Explanation:

Cloud identities in Office 365 are user accounts in Azure Active Directory.

You can use Windows PowerShell to administer Office 365 and Azure Active Directory. However, the default installation of Windows PowerShell on Windows 8 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active Directory.

You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active

Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework 3.5 is installed and enabled. Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed. This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.

NEW QUESTION 120

- (Exam Topic 6)

You are the Exchange Online administrator for an organization. The organization migrates all users to Exchange Online. An employee works for a partner organization named Contoso, Ltd. The employee uses the email alias `employeeel@contoso.com`.

Users report that over the past week, they have not received email messages from `employeeel@contoso.com`. You need to trace email messages that originate from `employeeel@contoso.com` to users inside your organization.

In the message trace window, which two settings should you configure? To answer, select the appropriate objects in the answer area.

Search for email messages from or to a user or users. You can specify user names or fully qualified email addresses. Wildcards are supported.

Sender:

Recipient:

Message was sent or received:

Delivery status:

Message ID:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

None of the fields in the Message Tracking window are compulsory.

In this question, the users have not received emails from `employeeel@contoso.com` for the last week. To view tracking information for emails from `employeeel@contoso.com` for the last week, we need to add `employeeel@contoso.com` as a sender. For a sender outside the organization, you can manually type in the email address.

The default search period is 48 hours. To view one week's worth of tracking data, we need to change the search period to 7 days.

NEW QUESTION 125

- (Exam Topic 7)

You need to gather the required report information for your email users. What should you do?

- A. In the Security & Compliance admin center, use the Top Mail Senders report.
- B. In the Exchange admin center, use the spam filter.
- C. In the Office 365 Admin center, use the Email Activity Usage report
- D. In the Office 365 Admin center, use the Top Rule Matches for Mail report.
- E. In the Security & Compliance admin center, use the Spam Detections report

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/view-email-security-reports#top-senders-and-rec>

NEW QUESTION 127

- (Exam Topic 7)

You need to configure DNS for the AD FS deployment.

Which DNS entries should you use? To answer, drag the appropriate DNS entries to the correct topologies. Each entry may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content

NOTE: Each correct selection is worth one point.

DNS entries

- Fs.fabrikam.com
- Fs.tailspintoys.com
- Fs.devfabrikam.com
- Enterpriseregistration.fabrikam.com
- Server1.fabrikam.com
- Server1.devfabrikam.com
- Server1.tailspintoys.com
- Enterpriseregistration.tailspintoys.com

Answer area

AD FS topology	DNS entry
Perimeter Network Namespace	DNS entry
Internal Network Namespace	DNS entry

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

AD FS topology	DNS entry
Perimeter Network Namespace	Fs.devfabrikam.com
Internal Network Namespace	Enterpriseregistration.fabrikam.com

NEW QUESTION 132

- (Exam Topic 7)

You need to implement authentication.

Which sign-in methods should you use? To answer, drag the appropriate sign-in methods to the correct Office JGS environments, Each method may be used once, more than once, or not at all. You may need to Crag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Sign-in methods

- Password hash synchronization with SSO
- Pass-through authentication with SSO
- AD FS
- Azure AD sign-in

Answer area

Office 365 environment	Sign-in method
Contoso.com	Sign-in method
Devfabrikam.com	Sign-in method

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer area

Office 365 environment	Sign-in method
Contoso.com	AD FS
Devfabrikam.com	AD FS

NEW QUESTION 136

- (Exam Topic 7)

You need to request a certificate for AD FS.

Which two options should you use? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point

- A. Subject Alternate Names of fs.devfabrikam.com and enterpriseregistration.devfabrikam.com
- B. Subject name of fs.fabrikam.com
- C. Subject Alternate Names of fs.windows.net and enterpriseregistration.windows.net
- D. Subject name of fs.devfabrikam.com
- E. Subject Alternate Names of fs.fabrikam.com and enterpriseregistration.fabrikam.com

Answer: DE

NEW QUESTION 140

- (Exam Topic 7)

You need to troubleshoot the issues for user Sarah.Jones.

How should you complete the command? To answer, select the appropriate options to the answer area. NOTE: Each correct selection is worth one point

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/powershell/module/exchange/mail-flow/get-messagetrace?view=exchange-ps>

NEW QUESTION 145

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to recommend a solution to meet the technical requirement for monitoring the health information. What should you recommend?

- A. Use the Office 365 Admin app to receive push notifications.
- B. From the Office 365 admin center, modify the Services and add-ins settings.
- C. From the Office 365 admin center, modify the Organization Profile settings.
- D. Use the Company Portal app to receive push notifications.

Answer: A

Explanation:

You can use the Office 365 Admin app on your mobile device to view Service health, which is a great way to stay current with push notifications.

<https://support.office.com/en-gb/article/How-to-check-Office-365-service-health-932ad3ad-533c-418a-b938-6e4>

NEW QUESTION 149

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that all of the planned changes for the AD FS sign-in webpage are performed successfully. Which cmdlet should you use to perform each change? To answer, drag the appropriate cmdlets to the correct types of change. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Cmdlets

- Set-AdfsGlobalWebContent
- Set-AdfsRelayingPartyWebContent
- Set-AdfsWebTheme

Answer Area

- Include the Fabrikam logo:
- Include the help desk phone number:
- Include the sign-in description:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:
[https://technet.microsoft.com/en-us/library/dn280950\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/dn280950(v=ws.11).aspx)

NEW QUESTION 150

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolFederatedUser for all users. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Convert-MsolFederatedUser cmdlet updates a user in a domain that was recently converted from single sign-on to standard authentication type. This option will not meet the objective of the question.

References:
<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msolfederateduser?view=azureadps-1.0>

NEW QUESTION 154

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Azure AD Connect.

You modify the UPN suffix of each sales department user to fabrikam.com. You need to ensure that the Active Directory changes are updated in Office 365.

What command should you run? To answer, select the appropriate options in the answer area.

Answer Area

`Set-MsolUserPrincipalName -UserPrincipalName username@`

`-NewUserPrincipalName username@`

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-MsolUserPrincipalName cmdlet is used to change the User Principal Name, or user ID, of a user. It can be used to move a user between a federated and standard domain, which results in their authentication type changing to that of the target domain.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluserprincipalname?view=azureadps-1.0>

NEW QUESTION 158

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the Service administrator admin role. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Service administrator admin role does not have the necessary privileges to create mailboxes in Exchange Online and sites in SharePoint Online.

References:

<https://support.office.com/en-us/article/About-Office-365-admin-roles-da585eea-f576-4f55-a1e0-87090b6aaa9d>

NEW QUESTION 162

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolDomainToFederated for the fabrikam.com domain and the contoso.com domain.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on. This includes configuring the relying party trust settings between the Active Directory Federation Services 2.0 server and Microsoft Online. As part of converting a domain from standard authentication to single sign-on, each user must also be converted. This conversion happens automatically the next time a user signs in. No action is required by the administrator.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msoldomaintofederated?view=azureadps>

NEW QUESTION 166

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the Exchange administrator admin role. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Exchange administrator admin role does not have the necessary privileges to create mailboxes in Exchange Online and sites in SharePoint Online.

References:

<https://support.office.com/en-us/article/About-Office-365-admin-roles-da585eea-f576-4f55-a1e0-87090b6aaa9d>

NEW QUESTION 167

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You synchronize all of the fabrikam.com users to Azure AD.

You need to implement the planned changes for the users in the United States office.

Which command should you run? To answer, select the appropriate options in the answer area.

Answer Area

<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <div style="padding: 2px;"> <p>Get-AdUser</p> <p>Get-MsolUser</p> <p>New-MsolLicenseOptions</p> </div> </div>	<p>All -UsageLocation "US"</p>	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <div style="padding: 2px;"> <p>-EnableDFilter</p> <p>-SearchString</p> <p>-UnlicensedUsersOnly</p> </div> </div>
<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <div style="padding: 2px;"> <p>New-MsolLicenseOptions</p> <p>Set-MsolUser</p> <p>Set-MsolUserLicense</p> </div> </div>	<p>-AddLicenses "Fabrikam:ENTERPRISEPACK"</p>	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Get-MsolUser cmdlet gets an individual user or list of users from Azure Active Directory. The -UnlicensedUsersOnly parameter indicates that only users who are not assigned a license are returned. The Set-MsolUser cmdlet modifies a user object in Azure Active Directory.
 References:
<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0> <https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluser?view=azureadps-1.0>

NEW QUESTION 170

- (Exam Topic 9)
 You need to configure the single sign-on environment for Contoso.
 Which certificate type and DNS entry should you use? To answer, select the appropriate options in the answer area.
 NOTE: Each correct selection is worth one point.

Answer Area

Action	Option
Certificate to install:	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <div style="padding: 2px;"> <p>trusted 3rd party SSL</p> <p>self-signed SSL</p> <p>Active Directory Certificate Services issued SSL</p> </div> </div>
DNS entry:	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <div style="padding: 2px;"> <p>sts.contoso.com</p> <p>sts.fabrikam.com</p> <p>sts.contoso.onmicrosoft.com</p> <p>sts.fabrikam.onmicrosoft.com</p> </div> </div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The token-signing certificate must contain a private key that chains to a trusted root in the FS. AD FS creates a self-signed certificate by default. It is recommend that the self-signed token-signing certificate generated by AD FS is used. Microsoft best practices recommends that you use the host name, STS (secure token service). ie. sts.domain.com.
 References:
<https://www.digicert.com/csr-creation-microsoft-office-365.htm>
<https://support.office.com/en-us/article/Plan-for-third-party-SSL-certificates-for-Office-365-b48cdf63-07e0-4cd>

NEW QUESTION 171

- (Exam Topic 9)
 You need to ensure that new accounts are provisioned correctly.
 What should you do? To answer, select the appropriate options in the answer area. NOTE: Each selection is worth one point.

Answer area	Option
Log on to the following server:	<div style="border: 1px solid black; padding: 2px;"> Server1.contoso.com ▼ Server2.contoso.com </div>
Perform the following action:	<div style="border: 1px solid black; padding: 2px;"> Run the Set-AdSynsScheduled cmdlet. ▼ Use the Task Scheduler MMC snap-in. Run the Set-ScheduledTask cmdlet. Edit the Microsoft.Online.DirSync.Scheduler.exe.config file </div>
Change the synchronization interval to the following value:	<div style="border: 1px solid black; padding: 2px;"> 30 minutes ▼ 120 minutes 160 minutes </div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure Active Directory (Azure AD) Connect application for the contoso.com domain runs on Server1.contoso.com. The Set-ADSyncScheduler cmdlet allows you to modify the CustomizedSyncCycleInterval parameter. The question states: "You receive reports that new users are not granted access to Office 365 resources fast enough. You must ensure that new accounts are provisioned as quickly as possible." Since the scheduler is already configured to sync every 2 hours (120 min.), 30 minutes should be configured.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-feature-schedu>

NEW QUESTION 172

- (Exam Topic 9)

You need to create a DNS record to resolve the email issues for ADatum Corporation users.

How should you configure the DNS record? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Record type

▼

TXT
 MX
 CNAME

Value

▼

v=spf1 include:spf.protection.outlook.com -all
 adatum-com.mail.protection.outlook.com
 autodiscover.outlook.com
 clientconfig.microsoftonline-p.net

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

MX (mail exchanger) records offer an simple way for mail servers to know where to send email. If you want Office 365 to receive all email addressed to anyone@contoso.com, the MX record for contoso.com should point to Office 365, and it will look like the following example:

Hostname: contoso-com.mail.protection.outlook.com Priority: 0

TTL: 1 hour References:

<https://support.office.com/en-us/article/Create-DNS-records-at-Register365-for-Office-365-004030b4-10ad-402> [https://technet.microsoft.com/en-us/library/jj937232\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/jj937232(v=exchg.150).aspx)

NEW QUESTION 174

- (Exam Topic 10)

You need to resolve the issue for Used. What should you do?

- A. Open a service request in the Office 365 admin center.
- B. Create a new ticket with Microsoft Premier Support.
- C. Reset the account password for the user.
- D. Run the Office 365 Client Performance Analyzer.

Answer: D

NEW QUESTION 175

- (Exam Topic 11)

Contoso, Ltd. has an on-premises SharePoint environment. The company plans to deploy SharePoint Online. You must use Active Directory Federation Services (AD FS). The global administrator account must be able to access the Office 365 tenant even if AD FS is unavailable. You need to set up the global administrator account. What should you do?

- A. In the Office 365 admin center, create a user named sp_admin@contoso.onmicrosoft.com
- B. In the Office 365 admin center, create a user named sp_admin@contoso.com
- C. In Active Directory Domain Services Users and Computers, create a user named sp_admin@contoso.onmicrosoft.com
- D. In Active Directory Domain Services Users and Computers, create a user named sp_admin@contoso.com

Answer: A

Explanation:

One of the first steps is to create SPO administrative account. You should always plan to create this account as Cloud ID, E.g. sp_admin@yourdomain.onmicrosoft.com. Having this as Cloud ID, it allows you to access your tenant even if On-Premises ADFS environment is unavailable. You can provision new Cloud Account from the Office 365 Administration site.

References:

<https://nikpatel.net/2014/06/03/best-practices-for-configuring-sharepoint-online-tenant-part-ii-configuring-share>

NEW QUESTION 178

- (Exam Topic 11)

You administer an Office 365 tenant for a company named Fabrikam, Inc. You deploy Active Directory Federation Services (AD FS) including Web Application Proxy servers.

You need to customize the AD FS logon screen to display your company name.

How should you complete the Windows PowerShell command? To answer, select the appropriate Windows PowerShell segments in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

<div style="border: 1px solid gray; padding: 5px;"> <div style="background-color: #f0f0f0; padding: 2px; text-align: right;">▼</div> <ul style="list-style-type: none"> Set-AdfsGlobalWebContent Set-AdfsWebTheme Set-AdfsFarmInformation Set-AdfsWebConfig </div>	<div style="border: 1px solid gray; padding: 5px;"> <div style="background-color: #f0f0f0; padding: 2px; text-align: right;">▼</div> <ul style="list-style-type: none"> -CompanyName -TargetName -Name -Identity </div>
--	---

"Fabrikam Company"

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Set-AdfsGlobalWebContent -CompanyName " Fabrikam Company"

Running the Set-AdfsGlobalWebContent cmdlet with the –CompanyName parameter specifies the company name for AD FS to display in the sign-in pages when you have not set a logo on the active web theme.

NEW QUESTION 182

- (Exam Topic 11)

A company has an Office 365 tenant.

You must reset the password for an account named User1.

You need to ensure that the new password for the account meets complexity rules. Which two passwords can you use? Each correct answer presents a complete solution.

- A. Summer2015
- B. May2015
- C. User1User1
- D. summer2015
- E. May 2015
- F. summer!@#&
- G. M1crosoft

Answer: AG

Explanation:

If the user is set to require a strong password, then all of the following rules must be met:

- ▶ The password must contain at least one lowercase letter.
- ▶ The password must contain at least one uppercase letter.
- ▶ The password must contain at least one non-alphanumeric character.
- ▶ The password cannot contain any spaces, tabs, or line breaks.
- ▶ The length of the password must be 8-16 characters.
- ▶ The user name cannot be contained in the password.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/active-directory-passwords-policy>

NEW QUESTION 185

- (Exam Topic 11)

You deploy an Office 365 tenant for your company. The tenant contains the domain names contoso.onmicrosoft.com and contoso.com. You have an on-premises Active Directory Domain Services (AD DS) domain named contoso.com.

You have the following requirements:

- ▶ Use active Directory Federation Services (AD FS) for authentication when users sign in to the Office 365 environment.
- ▶ Use Web Application Proxy (WAP) servers that run Windows Server 2012 R2.
- ▶ Ensure that Workplace Join is available for all users.

You need to request a certificate for the WAP servers. NOTE: Each correct selection is worth one point.

Answer area

Subject name

▼
Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

Subject Alternative Names

▼
Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

▼
Enterpriseregistration.contoso.com
Enterpriseenrollment.contoso.com
Enterpriseregistration.onmicrosoft.com
Enterpriseenrollment.contoso.onmicrosoft.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer area

Subject name

▼
 Adfs.contoso.com
 Adfs.contoso.onmicrosoft.com
 Adfs.microsoft.com

Subject Alternative Names

▼
 Adfs.contoso.com
 Adfs.contoso.onmicrosoft.com
 Adfs.microsoft.com

▼
 Enterpriseregistration.contoso.com
 Enterpriseenrollment.contoso.com
 Enterpriseregistration.onmicrosoft.com
 Enterpriseenrollment.contoso.onmicrosoft.com

NEW QUESTION 190

- (Exam Topic 11)

You are the Office 365 administrator for a company. You deploy Office 365 ProPlus.

You need to ensure that specific users can provide early feedback of Office updates as soon as they get released.

What should you do? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Office 365 admin center

▼
 In Office 365 admin center, enable First Release for the test users.
 Run the Set-OrganizationConfig Windows PowerShell cmdlet.
 Edit the configuration.xml file and run setup.exe.
 Run the Set-MsolCompanySettings Windows PowerShell cmdlet.

Office 365 ProPlus

▼
 In Office 365 admin center, enable First Release for the test users.
 Run the Set-OrganizationConfig Windows PowerShell cmdlet.
 Edit the configuration.xml file and run setup.exe.
 Run the Set-MsolCompanySettings Windows PowerShell cmdlet.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://support.office.com/en-us/article/set-up-the-standard-or-targeted-release-options-in-office-365-3b3adfa4-1> <https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool>

NEW QUESTION 194

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Office 365 subscription.

Several users report that they fail to connect to Microsoft Skype for Business Online by using the Skype for Business 2016 client.

You verify that you can connect to Skype for Business Online successfully from your computer. You need to identify what prevents the users from connecting to Skype for Business Online. Solution: You use the Microsoft Skype for Business Connectivity Analyzer.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The Microsoft Skype for Business Connectivity Analyzer tool has a very specific purpose. It is meant to determine if a Skype for Business environment, either on-prem or Skype for Business Online, meets the necessary requirements for client connectivity from mobile clients and the Skype for Business Windows Store App. The tool, in the course of its analysis, tests several components. Among them, it checks public DNS records to make sure the necessary A records and SRV records are in place. It also checks the proxy configuration for the environment. Lastly, but definitely not least important, it checks on the validity of the SSL certificates that are in place.

References:

<http://blog.get-csjosh.com/2015/05/microsoft-remote-connectivity-analyzer-and-associated-tools.html>

NEW QUESTION 195

- (Exam Topic 11)

Your company has an Office 365 subscription. The network contains an Active Directory domain. You configure single sign-on for all users. Corporate security policy states that all account passwords used by Windows services must be changed every 90 days.

An administrator changes all of the account passwords used by Windows services. You need to ensure that single sign-on continues to function.

What should you do?

- A. From Windows PowerShell, run the Update-MSOLFederatedDomain cmdlet.
- B. From Internet Information Services (IIS) Manager, modify the properties of the ADFS virtual directory.
- C. From the Services console, modify the properties of the AD FS 2.0 Windows Service.
- D. From Windows PowerShell, run the Set-MSOLADFSContext cmdlet.

Answer: C

Explanation:

References: [https://technet.microsoft.com/en-us/library/hh344806\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/hh344806(v=ws.10).aspx)

NEW QUESTION 198

- (Exam Topic 11)

You manage an Active Directory Domain Services (AD DS) domain. Your company plans to move all of its resources to Office 365.

You must implement Active Directory Federation Services (AD FS). You place all internet-facing servers on a perimeter network.

You need to ensure that intranet and extranet users are authenticated before they access network resources. Which three authentication methods should you provide for extranet users? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Windows Integrated Authentication using Negotiate for NTLM
- B. Windows Integrated Authentication using Negotiate for Kerberos
- C. Authentication with RADIUS
- D. Forms Authentication using username and passwords
- E. Certificate Authentication using certificates mapped to user accounts in AD DS

Answer: BDE

Explanation:

Windows Integrated Authentication makes use of Negotiate/Kerberos or NTLM to authenticate users based on an encrypted ticket/message passed between a browser and a server.

With Azure AD you need Forms-based authentication in ADFS for Azure AD/MSONline PowerShell Module and Azure AD Self-Service Password Reset.

In Active Directory mapping, when the IIS server receives a certificate from the user, it passes it on to Active Directory, which maps it to a Windows user account. The IIS server then logs this account on.

Active directory mapping is most useful when the account mappings are the same on all IIS servers. Administration is simplified because the mapping is done in only one place.

NEW QUESTION 200

- (Exam Topic 11)

Your company has an Office 365 subscription. A user named Test5 has a mailbox.

You need to ensure that all of the email messages sent and received by Test5 are accessible to members of the audit department for 60 days, even if Test5 permanently deletes the messages.

What should you do?

- A. Run the Set-User cmdlet.
- B. Run the Set-Mailbox cmdlet.
- C. Run the Set-RetentionPolicyTag cmdlet.
- D. Run the Set-MailboxDatabase cmdlet.
- E. Run the Set-RetentionPolicy cmdlet.

Answer: B

Explanation:

References: [https://technet.microsoft.com/en-us/library/bb123981\(v=exchg.160\).aspx](https://technet.microsoft.com/en-us/library/bb123981(v=exchg.160).aspx)

NEW QUESTION 202

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 plan. The company has a Microsoft SharePoint Online public website that is currently configured to use the onmicrosoft.com domain name.

The company purchases a new domain name.

You need to change the address of the SharePoint Online public website to the new domain name. What should you do first?

- A. In the SharePoint Online Administration Center, add the new domain.
- B. In the Office 365 admin center, add the new domain.
- C. Create a new site collection and assign it the new domain.
- D. Create a new public website and assign it to the new domain.

Answer: B

Explanation:

If you go to the SharePoint Online Administration Center and click the "Add Domain" button it takes you to the same location as if you would have clicked the "Domains" -> "Add domain" option from the Office 365 admin center.

So either A or B is technically correct, but if I had to choose one of the two I would select B. References:

NEW QUESTION 206

- (Exam Topic 11)

You are the office 365 administrator for a company. You deploy Microsoft SharePoint Online. Many users report that they cannot discover useful content via searches.

You need to run the appropriate SharePoint Online report to help identify the issue. Which report should you run?

- A. SharePoint Site Usage
- B. SharePoint Activity
- C. Query Rule Usage by Day
- D. Abandoned Queues by Day

Answer: D

Explanation:

NEW QUESTION 211

- (Exam Topic 11)

You are the Office 365 administrator Contoso, Ltd. You synchronize Active Directory Domain Services (AD DS) user accounts with an Office 365 environment by using Microsoft Azure Active Directory (Azure AD) Connect. You use a test account named Test1@contoso.com to perform configuration testing. The account currently accesses on-premises resources.

The Test1@contoso.com account experiences issues with Microsoft Exchange Online and SharePoint Online. You need to quickly recreate the account and prevent interruption in access to the on-premises resources. What should you do?

- A. Run the Remove -SPOUser cmdlet.
- B. Run the Remove -MsolUser cmdlet.
- C. In the Office 365 admin center, find and delete the account.
- D. Run the Remove ADUser cmdlet.
- E. In the Azure AD admin center, find and delete the account.

Answer: D

NEW QUESTION 215

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect.

You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements:

- All employees must use complex passwords.
- Passwords must be changed every six months.
- Employees must use multi-factor authentication (MFA) when possible.

You need to implement MFA verification options to use with the employee's password. Solution: Have the employee use a virtual smart card.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords. Virtual smartcards are not required.

References:

<https://support.office.com/en-us/article/Set-up-multi-factor-authentication-for-Office-365-users-8f0454b2-f51a->

NEW QUESTION 217

- (Exam Topic 11)

You have an Office 365 tenant that uses an Enterprise E3 subscription. You have two servers in a perimeter network that have the Active Directory Federation Services (AD FS) proxy role service installed. A federation server farm is located behind a firewall.

You need to ensure that the AD FS proxies can communicate with the federation server farm.

Which two name resolution strategies can you use? Each correct answer presents a complete solution.

- A. HOSTS file on the proxy servers
- B. DNS server in the perimeter network
- C. LMHOSTS file on the proxy servers
- D. LMHOSTS file on the federation servers
- E. HOSTS file on the federation servers

Answer: AB

Explanation:

Configure Name Resolution for a Federation Server Proxy in a DNS Zone That Serves Only the PerimeterNetwork

So that name resolution can work successfully for a federation server in an Active Directory Federation

Services (AD FS) scenario in which one or more Domain Name System (DNS) zones serve only the perimeter network, the following tasks must be completed:

- ▶ The hosts file on the federation server proxy must be updated to add the IP address of a federation server.
- ▶ DNS in the perimeter network must be configured to resolve all client requests for the AD FS host name to the federation server proxy. To do this, you add a host (A) resource record to perimeter DNS for the federation server proxy.

References:

<https://technet.microsoft.com/en-us/library/dd807045.aspx>

NEW QUESTION 220

- (Exam Topic 11)

You have an Office 365 subscription and an on-premises deployment of Active Directory. You deploy Microsoft Azure AD Connect.

Currently, the synchronization process is running. You need to modify the synchronization schedule.

Which task should you perform first?

- A. Enable staging mode.
- B. Invoke an Azure Active Directory (Azure AD) sync cycle profile.
- C. Create an Azure Active Directory (Azure AD) sync connector.
- D. Start the Azure AD Connect installation wizard.

Answer: C

Explanation:

The sync engine processes identity information from different data repositories, such as Active Directory or a SQL Server database. The sync engine encapsulates interaction with a connected data source within a module called a Connector. Each type of connected data source has a specific Connector. The Connector translates a required operation into the format that the connected data source understands.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-understanding->

NEW QUESTION 223

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains a single Active Directory forest. The forest contains a domain controller and Active Directory Federation Services (AD FS) servers that are deployed to virtual machines. The virtual machines run either on-premises or on Microsoft Azure.

You have Azure AD Connect deployed on-premises. The Azure AD Connect database is installed on an on-premises instance of Microsoft SQL Server 2014.

Last month, an Azure AD Connect server experienced a hardware failure that caused an Azure AD Connect server to go offline for several days.

You need to recommend a solution to reduce the outage window when hardware failure occurs on the Azure AD Connect server.

Solution: You deploy a new Azure AD Connect server to an Azure virtual machine that uses a new SQL Server instance. You set the Azure AD Connect server to staging mode.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Azure AD Connect sync Staging mode can be used for several scenarios, including:

- ▶ High availability.
- ▶ Test and deploy new configuration changes.
- ▶ Introduce a new server and decommission the old.

If you have a more complex environment, then having one or more standby servers is recommended. During installation, you can enable a server to be in staging mode.

Use virtual machines

A common and supported method is to run the sync engine in a virtual machine. In case the host has an issue, the image with the sync engine server can be migrated to another server.

References:

<https://azure.microsoft.com/en-us/documentation/articles/active-directory-aadconnectsync-operations/>

NEW QUESTION 224

- (Exam Topic 11)

Your company has an Office 365 subscription that is configured for single sign-on (SSO) to an on-premises deployment of Active Directory. Office 2016 is deployed to all workstations. Microsoft OneDrive for Business is used to replicate My Documents to OneDrive for Business. You need to ensure that when clients connect to Office 365 from an untrusted network, they can access Office 365 resources by using a web browser. Which two actions should you perform? Each correct answer presents part of the solution.

- A. Modify the Sharing settings for SharePoint Online.
- B. Disable modern authentication.
- C. Add a claims provider trust.
- D. Add a relying party trust.
- E. Add a new rule.

Answer: BC

Explanation:

B: In Skype for Business Server 2015, Modern Authentication is used between on-premises clients and on-premises servers in order to give users a proper level of authorization to resources.

C: A Claims Provider trust is one where ADFS gets claims from the Claim Provider, which could be the local AD as Claims Provider or an external Claims Provider.

NEW QUESTION 227

- (Exam Topic 11)

You are the system administrator for a small sales company in Chicago. You must migrate all users to Office 365. You add a domain to the Office 365 tenant. You need to verify the new domain. Which type of DNS record should you create?

- A. A
- B. NS
- C. TXT
- D. PTR

Answer: C

NEW QUESTION 230

- (Exam Topic 11)

You are the system administrator for a manufacturing company. You plan to implement Office 365. You must create accounts for all employees and implement a password policy that requires strong passwords. Which two characters can users include in passwords? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. spaces
- B. *
- C. <
- D. Unicode characters
- E. !

Answer: BE

NEW QUESTION 232

- (Exam Topic 11)

Your company has an Office 365 subscription. A user named User1 has a mailbox. You need to ensure that all of the email messages sent and received by User1 are accessible to the audit department for 60 days, even if User1 permanently deletes the messages. What should you do?

- A. Run the Set-MailboxDatabase cmdlet and specify the -DeletedItemRetention parameter.
- B. Run the Set-Mailbox cmdlet and specify the -LitigationHoldEnabled parameter.
- C. Run the Set-Mailbox cmdlet and specify the -SingleItemRecoveryEnabled parameter.
- D. Run the Set-MailboxDatabase cmdlet and specify the -EventHistoryRetentionPeriod parameter.

Answer: B

Explanation:

References: [https://technet.microsoft.com/en-us/library/bb123981\(v=exchg.160\).aspx](https://technet.microsoft.com/en-us/library/bb123981(v=exchg.160).aspx)

NEW QUESTION 233

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains a single Active Directory forest. The forest contains a domain controller and Active Directory Federation Services (AD FS) servers that are deployed to virtual machines. The virtual machines run either on-premises or on Microsoft Azure.

You have Azure AD Connect deployed on-premises. The Azure AD Connect database is installed on an on-premises instance of Microsoft SQL Server 2014.

Last month, an Azure AD Connect server experienced a hardware failure that caused an Azure AD Connect server to go offline for several days.

You need to recommend a solution to reduce the outage window when hardware failure occurs on the Azure AD Connect server.

Solution: You deploy a new on-premises Azure AD Connect server that uses the same SQL Server instance. You start Azure AD Connect sync.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

An on-premises Azure AD Connect server already exists. A server in staging mode is required to provide High Availability.

References:

<https://azure.microsoft.com/en-us/documentation/articles/active-directory-aadconnectsync-operations/>

NEW QUESTION 238

- (Exam Topic 11)

You are the Office 365 administrator for a company.

You hire a third-party company to provide Office 365 support.

You need to ensure that the third-party company can access the following data:

- current status for each service
- historical data for service health
- outage message and other Office 365 communications for the tenant
- programmatic access to the service health data

What should you do?

- A. Connect to the Office 365 Security and Compliance Center by using Windows PowerShell commands.
- B. Grant the third-party company access to the Office 365 Service Communications API.
- C. Add the users from the third-party company to the Office 365 Service administrator role.
- D. Grant the third-party company access to the Office 365 Management Activity API.

Answer: C

Explanation:

The service administrator role gives a user rights to open and handle support requests with Microsoft related to Office 365 services. Service administrators have very limited permissions other than opening and reading support tickets. This role is often coupled with other administrative roles such as Exchange, SharePoint and others to let those administrators follow key details such as service health and new release notices.

References:

<http://searchexchange.techtarget.com/definition/Microsoft-Office-365-admin-roles>

NEW QUESTION 242

- (Exam Topic 11)

Your company has an Office 365 Enterprise E1 subscription. The company wants to implement an enterprise document collaboration and social networking platform that allows users to upload documents from their computers and conduct informal polls.

You need to implement a solution that meets the requirements. Which solution should you implement?

- A. Microsoft SharePoint document libraries
- B. Microsoft SharePoint surveys
- C. Microsoft Yammer
- D. Microsoft SharePoint newsfeeds
- E. Microsoft SkyDrive Pro

Answer: C

Explanation:

Yammer is Microsoft's private collaboration platform for enterprise social networking.

Unlike public social media platforms such as Twitter, Yammer only allows members to connect with other members who belong to the same email domain. This unique feature provides corporate employees with the ability to communicate privately, using a graphical user interface (GUI) that resembles Facebook.

NEW QUESTION 246

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.

You need to verify domain ownership. Solution: Add an SPF record.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 247

- (Exam Topic 11)

Your company has an Office 365 tenant. You use Microsoft Azure Directory (Azure AD) Connect to synchronize the on-premises users to your Office 365 environment. You enable password synchronization.

You must implement a single-sign-on (SSO) solution. You deploy Active Directory Federation Services (AD FS). You are connected to the AD FS primary server.

You need to ensure that users can log on with their corporate credentials when they access Office 365 resources.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Run the Windows PowerShell **Set-MsolService** command.
- Run the Windows PowerShell **Connect-MsolService** command.
- Open the Azure AD Module for PowerShell.
- Open PowerShell as an Administrator.
- Run the Windows PowerShell **Convert-MsolDomainToFederated** command.
- Run the Windows PowerShell **Convert-MsolDomainToStandard** command.

Answer area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

- Run the Windows PowerShell **Set-MsolService** command.
- Run the Windows PowerShell **Connect-MsolService** command.
- Open the Azure AD Module for PowerShell.
- Open PowerShell as an Administrator.
- Run the Windows PowerShell **Convert-MsolDomainToFederated** command.
- Run the Windows PowerShell **Convert-MsolDomainToStandard** command.

Answer area

Open the Azure AD Module for PowerShell.

Run the Windows PowerShell **Set-MsolService** command.

Run the Windows PowerShell **Convert-MsolDomainToFederated** command.

NEW QUESTION 249

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription.

You use single sign-on for all user accounts. You plan to migrate all services to Office 365. You need to ensure that all accounts use standard authentication.

Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkededUser
- H. New-MsolUser

Answer: E

Explanation:

The Convert-MsolFederatedUser cmdlet is used to update a user in a domain that was recently converted from single sign-on (also known as identity federation) to standard authentication type.

NEW QUESTION 254

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 license plan. Employees are issued laptop computers that are configured with a standard image.

The image includes an installation of Office 365 ProPlus that must be activated by the employees. An employee recently received a new laptop computer to replace an older laptop.

The older laptop will be reimaged.

When the employee attempts to start Word for the first time, she receives a message saying that she cannot activate it because she has already activated five devices.

You need to help the employee to license Office on her new computer. Which two actions could you perform?

- A. Assign a second E3 license to the employee.
- B. Remove the employee's E3 license and then assign a new E3 license.
- C. Instruct her to Sign in to the Office 365 portal as the employee and deactivate the old laptop.
- D. Sign in to the Office 365 portal by using your Global Admin account and then deactivate the old laptop.

Answer: CD

Explanation:

References: <https://www.bettercloud.com/monitor/the-academy/deactivate-office-365-installation/>

NEW QUESTION 257

- (Exam Topic 11)

You are the Office 365 administrator for your company.

Users report that they have received significantly more spam messages over the past month than they normally receive.

You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

- A. the Mail protection reports
- B. the Office 365 Malware detections in received mail report
- C. messages on the Message center page
- D. the Mailbox access by non-owners report

Answer: A

Explanation:

Use mail protection reports in Office 365 to view data about malware, spam, and rule detections.

If you're an Exchange Online or Exchange Online Protection (EOP) admin, there's a good chance you'd like to monitor how much spam and malware is being detected, or how often your transport rules are being matched. With the interactive mail protection reports in the Office 365 admin center, you can quickly get a visual report of summary data, and drill-down into details about individual messages, for as far back as 90 days.

NEW QUESTION 260

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to distribute the Office 365 ProPlus client to users. The client machines do not normally have Internet access.

You need to activate the Office 365 ProPlus installations and ensure that the licenses remain active. What should you do?

- A. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 90days after that.
- B. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 30 days after that.
- C. Connect the client computer to the Internet only once to activate the Office 365 ProPlus client.
- D. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 180 days after that.
- E. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 365 days after that.

Answer: B

Explanation:

After you've verified the user is assigned a license, you should check that Office 365 ProPlus is activated. Activation usually occurs during initial installation. The computer has to connect to the Internet at least once every 30 days for Office 365 ProPlus to remain activated.

References:

<https://technet.microsoft.com/en-us/library/gg702620.aspx>

NEW QUESTION 264

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.

You create a custom website. You must host the website through a third-party provider at the IP v6 address 2001:4860:4801:5::4d.

You need to configure the correct DNS settings.

What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

	DNS target	DNS record
Name Server	ns1.bdm.microsoftonline.com	
A	ns2.bdm.microsoftonline.com	
AAAA	2001:4860:4801:5::4d	
TXT		
CNAME		
SRV		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Change your domain's name server (NS) records

When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To setup your domain with Office 365 services, like email, you change your domain's name server (or NS) record

sat your domain registrar to point to the Office 365 primary and secondary name servers.

Use (AAAA) DNS record for the website. We must use an (AAAA) and not an (A) record since an Ipv6 address is used.

NEW QUESTION 268

- (Exam Topic 11)

An organization has an Office 365 tenant. You use multi-factor authentication for all privileged accounts. User1 is on an extended leave of absence. You must configure the mailbox for User1 to forward to User2. You need to configure forwarding for User1's mailbox. What should you do first?

- A. Launch Windows PowerShell as an administrator.
- B. Launch the Exchange Admin Center.
- C. Create an app password for the administrator account.
- D. Connect to Exchange Online by using Remote PowerShell.

Answer: C

NEW QUESTION 270

- (Exam Topic 11)

You are the Office 365 administrator for a company. You deploy Azure Active Directory (Azure AD) Connect.

You need to ensure synchronization occurs every 20 minutes.

How should you complete the Windows PowerShell command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

▼

Set-ScheduledJob

Set-ScheduledTask

Set-ADSyncScheduler

Set-ADSyncDirSyncConfiguration

-

▼

CustomizedSyncCycleInterval

PurgeRunHistoryInterval

00:20:00

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-feature-schedu>

NEW QUESTION 272

- (Exam Topic 11)

A company has 50 employees that use Office 365.

You need to disable password expiration for all accounts.

How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 275

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.

You create a custom website. You must host the website through a third-party provider at the IPv6 address 2001:4860:4801:1:5:4d. You need to configure the correct DNS settings.

What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Name Server	DNS target	DNS record
A	ns1.bdm.microsoftonline.com	
AAAA	ns2.bdm.microsoftonline.com	
TXT	134.170.185.46	
CNAME		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Change your domain's name server (NS) records

When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To set up your domain with Office 365 services, like email, you change your domain's name server (or NS) records at your domain registrar to point to the Office 365 primary and secondary name servers. Use (A) DNS record for the web site.

NEW QUESTION 278

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage the network for a company named Fabrikam, Inc. The network contains a single Active Directory forest named fabrikam.com.

Fabrikam has two separate organizations. Each organization has a child domain in the forest. The two child domains are named org1.fabrikam.com and org2.fabrikam.com.

The forest has the following deployed:

- ▶ Microsoft Exchange Server 2016
- ▶ Active Directory Federation Services (AD FS) 2.0

You need to synchronize each child domain to a separate Office 365 subscription.

Solution: You deploy an instance of Microsoft Azure AD Connect to org1.fabrikam.com and org2.fabrikam.com.

Does this meet the goal?

- A. Yes.
- B. No

Answer: B

NEW QUESTION 280

- (Exam Topic 11)

A company has an Active Directory Domain Services domain.

You plan to implement Active Directory Federation Service (AD FS) with single sign-on. You have the following requirements:

- ▶ Servers must a Windows Server 2012 R2.
- ▶ Internet-facing servers must be placed in the perimeter network.
- ▶ The solution must support at least 105 AD FS trust relationships.

You need to deploy the appropriate roles.

Answer Area

	Deployment location	Role
Web Application Proxy	Perimeter network	
Federation Service Proxy	Application server	
Active Directory Federation Services	Database server	
Active Directory Domain Services		
SQL Server		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

- Install a third-party certificate.
- Modify the Active Directory claims provider trust.
- Modify the relying party trust for the Microsoft Office 365 Identity Platform.
- Run the AD FS Federation Server Configuration Wizard.
- Federate the AD FS domain.

Answer Area

- Install a third-party certificate.
- Run the AD FS Federation Server Configuration Wizard.
- Federate the AD FS domain.
- Modify the relying party trust for the Microsoft Office 365 Identity Platform.

NEW QUESTION 282

- (Exam Topic 11)

You plan to import several user accounts to an Office 365 subscription by using a CSV file. You download a sample CSV file from the Office 365 admin center. You need to prepare the file for the planned import. What should you do?

- A. Add a column named Managed By.
- B. Add values to the UserName and Country columns.
- C. Add values to the UserName and DisplayName columns.
- D. Add a column named Password.

Answer: C

Explanation:

Example of CSV file content:

User Name	First Name	Last Name	Display Name	Job Title	Department

References:<http://community.bamboosolutions.com/blogs/office-365/archive/2014/12/29/how-to-import-bulk-us>

NEW QUESTION 284

- (Exam Topic 11)

A company has an Office 365 tenant and uses Exchange Online and Skype for Business Online. User1 is scheduling a Skype meeting with User2. User 1 is not able to see availability information for User2. You need to troubleshoot the issue. What should you use?

- A. Microsoft Connectivity Analyzer Tool
- B. Microsoft Skype for Business Connectivity Analyzer Tool
- C. Message Header Analyzer
- D. IdFix

Answer: A

Explanation:

The Microsoft Connectivity Analyzer Tool verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa

References:
<https://blogs.technet.microsoft.com/exchange/2013/03/11/announcing-microsoft-connectivity-analyzer-mca-1-0->

NEW QUESTION 289

- (Exam Topic 11)

You are the system administrator for a company named Fabrikam, Inc. You implement Office 365. You need to modify settings for the Office 365 tenant. Which action can you perform?

- A. Modify the custom domain of fabrikam.com.
- B. Modify the Microsoft Teams URL
- C. Rename the fabrikam.onmicrosoft.com domain name.
- D. Remove the fabrikam.onmicrosoft.com domain name.

Answer: A

NEW QUESTION 291

- (Exam Topic 11)

You are the Office 365 administrator for your company. You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 10 to perform the management tasks. You need to ensure that the Windows 10 computer has the necessary software installed. What should you install first?

- A. Windows PowerShell 4.0
- B. Azure Active Directory Rights Management Service
- C. Microsoft Online Services Sign-in Assistant
- D. Azure Identity Service

Answer: A

NEW QUESTION 293

- (Exam Topic 11)

You are the administrator for Contoso Ltd. All employee mailboxes are hosted in Microsoft Exchange Online. All employees use the contoso.com company domain as their primary SMTP address.

Users from partner companies report that the email messages they receive from Contoso are marked as spam. You need to configure DNS to help prevent spam. What should you do? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

On your company's DNS servers do the following:

Create ▼ with the value of ▼

a TXT record

an MX record

an A record

an NS record

v=spf1 include:spf.protection.outlook.com -all
protection.outlook.com

v=spf1 include:spf.contoso.com -all
protection.contoso.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 294

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.

You need to verify domain ownership. Solution: Add an NS record.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 296

- (Exam Topic 11)

You are an administrator for a company. You are planning an Office 365 pilot. The current environment has servers that run Windows Server 2012. There is no budget to upgrade the servers.

You add an external DNS record for Active Directory Federation Services (AD FS). You must implement a single sign-on (SSO) solution for users to access the Office 365 resources. You must deploy the AD FS components with the following requirements:

- Loss of a single server must not prevent any authentication request or management function.
- Users must be able to access the Office 365 environment from their home computers by using their corporate credentials.
- Any modifications to service configurations must be made after servers are deployed. You need to deploy AD FS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer area

- Deploy an AD FS proxy server in the perimeter network.
- Create an AD FS federation server farm.
- Add an external DNS record that points to the AD FS federation server.
- Deploy multiple AD FS proxies in the perimeter network.
- Deploy an AD FS proxy in the internal network.
- Deploy a Microsoft SQL Server cluster to host the AD FS configuration database.
- Deploy a Microsoft SQL Server instance to host the AD FS configuration database.
- Create an AD FS federation server.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 297

- (Exam Topic 11)

You plan to migrate from a third-party IMAP email system to an Office 365 tenant.

You must ensure that the tenant passes the health, readiness, and connectivity steps. The solution must also provide step-by-step assistance to migrate email account.

You need to plan the migration. What should you do?

- A. Run the Domains setup wizard.
- B. Use the Remote Connectivity Analyzer.
- C. Run the Office 365 advanced setup wizard.
- D. Use the Office 365 Service Health Dashboard.

Answer: C

Explanation:

Use the Office 365 Setup wizard to perform an IMAP migration.

The advance setup wizard can run automated checks to discover how your current environment is set up and then, based on what is found, recommend a path to Office 365. If you tell Office 365 Setup wizard that your source email system uses IMAP, and you have fewer than 151 mailboxes, it recommends that you use the Office 365 Setup wizard to copy your users email to Office 365 by using IMAP migration.

NEW QUESTION 300

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect.

You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements:

- All employees must use complex passwords.
- Passwords must be changed every six months.
- Employees must use multi-factor authentication (MFA) when possible.

You need to implement MFA verification options to use with the employee's password. Solution: Have the employee receive an SMS text.

Does the solution meet the goal?

- A. Yes

B. No

Answer: A

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords.

NEW QUESTION 302

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have an on-premises Active Directory forest.

You deploy Active Directory Federation Services (AD FS) and purchase an Office 365 subscription. You need to create a trust between the AD FS servers and the Office 365 subscription.

Solution: You run the New-MSOLFederatedDomain cmdlet. Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

Each domain that you want to federate must either be added as a single sign-on domain or converted to be a single sign-on domain from a standard domain.

Adding or converting a domain sets up a trust between AD FS and Microsoft Azure Active Directory (Microsoft Azure AD).

Note: The New-MSOLFederatedDomain cmdlet adds a new single sign-on domain (also known as identity-federated domain) to and configures the relying party trust settings between the on-premises AD FS server. Due to domain verification requirements, you may need to run this cmdlet several times in order to complete the process of adding the new single sign-on domain.

NEW QUESTION 307

- (Exam Topic 11)

You are the Office 365 administrator for your company. Employees do not have local administrative privileges on client computers.

The company has the following client computer software:

▶ Windows 7 and Windows 8

▶ 32-bit and 64-bit Office 2007, Office 2010, and Office 2013

When accessing the corporate Microsoft SharePoint 2010 site, some users are unable to display SharePoint lists in the Datasheet view.

You need to ensure that all users can display SharePoint lists in the Datasheet view. What should you do?

A. Upgrade to the latest version of Office 365 ProPlus.

B. Force a reinstallation of Office by using Group Policy and specifying a network location.

C. Uninstall the 64-bit version of Office and then install the 32-bit version of Office.

D. Upgrade all Office 2007 and Office 2010 versions to Office 2013.

Answer: C

Explanation:

A 64-bit version of the Datasheet component is not available for Office 2010.

For SharePoint Server 2010, 64-bit versions install some Office 32-bit client-side controls for supporting solutions in a 32-bit browser (the default browser on current 64-bit Windows systems).

The Edit in Datasheet view functionality in SharePoint Server 2010 isn't supported if you install 64-bit Office 2013 client.

The Edit in Datasheet functionality is available if you install 32-bit Office 2013 client References:
